More information about cables can be found  
under MOTION-CONNECT connection systems.

<sup>1)</sup> Connector size 3 not rotatable. An alternative terminal box can be selected with connector size 3 only.

<sup>2)</sup> The degree of protection refers to the motor. The built-in fan meets the requirements of degree of protection IP54.

<sup>3)</sup> Optimum efficiency in continuous duty.

<sup>4)</sup> With default setting of the pulse frequency.

<sup>5)</sup> The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>6)</sup>  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

More information about cables can be found  
under MOTION-CONNECT connection systems.

<sup>1)</sup> Connector size 3 not rotatable. An alternative terminal box can be selected with connector size 3 only.

<sup>2)</sup> Optimum efficiency in continuous duty.

<sup>3)</sup> With default setting of the pulse frequency.

<sup>4)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>5)</sup>  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$      $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

More information about cables can be found under MOTION-CONNECT connection systems.

<sup>1)</sup> Connector size 3 is not rotatable. An alternative terminal box can be selected with connector size 3 only.

<sup>2)</sup> Optimum efficiency in continuous duty.

<sup>3)</sup> With default setting of the pulse frequency.

<sup>4)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>5)</sup> With the specified Motor Module, at  $\Delta T = 100$  K winding temperature rise, the motor cannot be fully utilized with  $M_0$ . If a Motor Module with a higher rating is used, you must check whether the specified power cable can be connected to the larger Motor Module.

<sup>6)</sup>  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb\cdot ft] \times n_{rated}}{5250}$

More information about cables can be found under MOTION-CONNECT connection systems.

<sup>1)</sup> Connector size 3 is not rotatable. An alternative terminal box can be selected with connector size 3 only.

<sup>2)</sup> Optimum efficiency in continuous duty.

<sup>3)</sup> With default setting of the pulse frequency.

<sup>4)</sup> The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>5)</sup>  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

## Feed motors

### SIMOTICS S servomotors for SINAMICS S120

#### SIMOTICS S-1FK7 synchronous motors

##### Overview

SIMOTICS S-1FK7 motors

SIMOTICS S-1FK7 motors are compact permanent-magnet synchronous motors. The available options, gearboxes and encoders, together with the expanded product range, mean that the SIMOTICS S-1FK7 motors can be optimally adapted to any application. They therefore also satisfy the permanently increasing demands of state-of-the-art machine generations.

1FK7 motors can be combined with the SINAMICS S120 drive system to create a powerful system with high functionality. The integrated encoder systems for speed and position control can be selected depending on the application.

The motors are designed for operation without external cooling and the heat is dissipated through the motor surface. 1FK7 motors have a high overload capability.

##### Benefits

###### **1FK7 Compact motors offer:**

- Space-saving installation due to extremely high power density
- For universal applications
- Wide range of motors

###### **1FK7 High Dynamic motors offer:**

- Extremely high dynamic response thanks to the very low rotor moment of inertia

###### **1FK7 High Inertia motors offer:**

- Robust closed-loop control properties for high or variable load moment of inertia
- Minimal optimization and commissioning overhead for the compensation of disturbances

##### Application

- Machine tools
- Robots and handling systems
- Wood, glass, ceramics and stone working
- Packaging, plastics and textile machines
- Printing machines
- Auxiliary axes

When ordering a motor with options, **-Z** should be added to the order number.

<sup>1)</sup> For the paint finish, 1FK702 motors must be ordered with 3 or 5 in the 16th data position.

<sup>2)</sup> For the paint primer, 1FK702 motors must be ordered with 0 or 2 in the 16th data position.

## Options (continued)

**M03****Version for Zone 2 hazardous areas according to IEC EN 60079-15**

Combustible or explosive gases or vapors occur only rarely or briefly in Zone 2 areas. The type of protection designation is EEx nA II (non sparking).

The special conditions for operating 1FK7 motors in Zone 2 areas, in particular the reduction in permissible operating speeds, are described in detail in Appendix 610.40063.01 to the EC Declaration of Conformity 664.20025.21.

**M39****Version for Zone 22 hazardous areas according to IEC 61241-1**

Combustible or potentially explosive dust (non-conductive dust) occurs only rarely or briefly in Zone 22 areas. The type of protection designation is Ex 3D T 160 °C (320 °F).

The special conditions for operating 1FK7 motors in Zone 22 areas are described in detail in Appendix 610.40071.01 to the EC Declaration of Conformity 664.20031.21.

Note regarding M03 and M39 options:

When used in Zone 2 or Zone 22, 1FK7 motors are only designed for encoder connection through connectors. A version with a DRIVE-CLiQ interface on the motor is not possible. Connection to SINAMICS S120 is only possible via SMC (Sensor Module Cabinet-Mounted).

**N05****Non-standard shaft extension (dimensions as for 1FT5 motors)**

1FK7 motors are shipped with the following shaft dimensions that are compatible with 1FT5 motors:

- SH 36: 11 × 23 mm (0.43 × 0.91 in)
- SH 48: 14 × 30 mm (0.55 × 1.18 in)
- SH 63: 19 × 40 mm (0.75 × 1.57 in)
- SH 80: 24 × 50 mm (0.94 × 1.97 in)
- SH 100: 32 × 58 mm (1.26 × 2.28 in)

Note:

1FK706 motors with Option N05 do not have a compatible flange with 1FT506 motors.

**N16****Version for increased chemical resistance with protective properties checked according to DIN EN ISO 4628-1**

Suitable for all areas with increased demands on the protective properties of the paint system. These requirements may include applications with acids (e.g. phosphoric acid), alkalis (e.g. active chlorine), disinfectants (e.g. hydrogen peroxide and peracetic acid), saltwater and more.

Note:

The paint application PS Premium has been tested with a broad spectrum of industrial cleaning products with pH values ranging from 1.5 – 13. Resistance against the acidic and alkali cleaning products used, as well as disinfectants, was proved by a material resistance test performed by ECOLAB Deutschland GmbH.

More information about cables can be found  
under MOTION-CONNECT connection systems.

<sup>1)</sup> Optimum efficiency in continuous duty.

<sup>2)</sup> With default setting of the pulse frequency.

<sup>3)</sup> The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.

<sup>4)</sup> With the specified Motor Module, the motor cannot be fully utilized with  $M_0$  at  $\Delta T = 100$  K winding temperature rise. If a Motor Module with a higher rating is used, you must check whether the specified power cable can be connected to the larger Motor Module.

<sup>5)</sup>  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

More information about cables can be found  
under MOTION-CONNECT connection  
systems.

1) Optimum efficiency in continuous duty.

2) With default setting of the pulse frequency.

3) The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.

4)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

1) Optimum efficiency in continuous duty.

2) With default setting of the pulse frequency.

3) The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.4)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

More information about cables can be found under MOTION-CONNECT connection systems.

1) Optimum efficiency in continuous duty.

2) With default setting of the pulse frequency.

3) The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.4)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

1) Optimum efficiency in continuous duty.

2) With default setting of the pulse frequency.

3) The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.4) With the specified Motor Module, the motor cannot be fully utilized with  $M_0$  at  $\Delta T = 100$  K winding temperature rise. If a Motor Module with a higher rating is used, you must check whether the specified power cable can be connected to the larger Motor Module.5)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb_f \cdot ft] \times n_{rated}}{5250}$

1) Optimum efficiency in continuous duty.

2) With default setting of the pulse frequency.

3) The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.4) With the specified Motor Module, the motor cannot be fully utilized with  $M_0$  at  $\Delta T = 100$  K winding temperature rise. If a Motor Module with a higher rating is used, you must check whether the specified power cable can be connected to the larger Motor Module.5)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb_f \cdot ft] \times n_{rated}}{5250}$

More information about cables can be found under MOTION-CONNECT connection systems.

<sup>1)</sup> Optimum efficiency in continuous duty.

<sup>2)</sup> With default setting of the pulse frequency.

<sup>3)</sup> The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.

<sup>4)</sup>  $P_{calc} [\text{kW}] = \frac{M_0 [\text{Nm}] \times n_{rated}}{9550}$      $P_{calc} [\text{hp}] = \frac{M_0 [\text{lb}_f\text{-ft}] \times n_{rated}}{5250}$

More information about cables can be found  
under MOTION-CONNECT connection  
systems.

1) Optimum efficiency in continuous duty.

2) With default setting of the pulse frequency.

3) The current carrying capacity of the power cable complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F). Cable cross-section for brake connection 2 × 1.5 mm<sup>2</sup>.

4)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

## SIMOTICS S servomotors for SINAMICS S120

### Selection aids – Built-in holding brakes for SIMOTICS S-1FT7/1FK7 synchronous motors

#### Overview

Many drives need a holding brake with an emergency stop function for safety reasons or to meet process requirements.

The permanent magnet single-surface brakes used on the SIMOTICS S-1FT7/1FK7 motors function according to the closed circuit principle. The magnetic field of the permanent magnet exerts a tension on the brake anchor plate, i.e. in a condition of zero current, the brake is closed and the motor shaft thereby stopped. When the rated voltage of 24 V DC  $\pm$  10 % is applied to the brake, current flows through the coil and produces a counter-field that cancels the pull of the permanent magnet, causing the brake to release.

In the event of an emergency stop or power outage, approximately 2000 braking operations can be performed with the maximum switched energy without causing excessive wear on the holding brake (condition: maximum external moment of inertia = moment of inertia of motor and  $n_{\max}$  type-specific).

The holding brake is not an operational brake.

In order to avoid switching overvoltages and any related effects on the plant environment, the brake cables must be connected externally with a varistor. The connection is made via the power connector or the terminal box.

When connected to the SINAMICS S120 drive system, this overvoltage protection is already included.

<sup>1)</sup> The holding torque is the highest permissible torque with which the closed brake can be loaded in steady-state operation without slip (holding function when motor is stationary).

## Overview

SIMOTICS S-1FT7 motor with mounted SP+ series planetary gearbox

SIMOTICS S-1FT7 motors can be combined with planetary gearboxes to form compact coaxial drive units. The gearboxes are flanged directly to the drive end of the motors.

When selecting the gearbox, ensure that its maximum permissible input speed is not exceeded by the maximum speed of the motor. In the case of high operating frequencies, allowance must be made for the factor  $f_2$  (see Configuration Manual, SIMOTICS S-1FT7 synchronous motors). The frictional losses of the gearbox must always be taken into account.

The gearboxes are only available in non-balanced design.

## Benefits

- High efficiency  
Single-stage: > 97 %  
Two-stage: > 94 %
- Minimum torsional backlash  
Single-stage: ≤ 4 arcmin  
Two-stage: ≤ 6 arcmin
- Power transmission from the central sun wheel via planet wheels
- No shaft deflections in the planet wheel set due to symmetrical force distribution
- Very low moment of inertia and thus short acceleration times of the motors
- Output shaft bearings dimensioned for high cantilever and axial loads with preloaded tapered-roller bearings
- The gearboxes are connected to the motor shaft via an integrated clamping hub. A plain motor shaft extension is necessary for this purpose. Shaft and flange accuracy tolerance N in accordance with DIN 42955 and vibration severity grade A in accordance with EN 60034-14 are sufficient. The motor flange is adapted by means of adapter plates.
- Output shaft of gearbox exactly coaxial with the motor
- The gearboxes are enclosed (seal between gearbox and motor) and filled with oil at the factory. They are lubricated and sealed for their service life.  
The gearboxes are suitable for all mounting positions.
- Degree of protection of gearbox: IP65
- Small dimensions
- Low weight

## Integration

SIMOTICS S-1FT703 to 1FT710 motors can be supplied ex factory (Siemens AG) complete with flange-mounted planetary gearbox.

The gearboxes assigned to the individual motors and gear ratios  $i$  available for these motor/gearbox combinations are listed in the subsequent selection table. When making a selection, account must be taken of the maximum permissible input speed of the gearbox (this is the same as the maximum motor speed).

The motor/gearbox combinations listed in the selection tables are mainly intended for cycle operation S3-60% (ON time ≤ 60 % and ≤ 20 min). Reduced maximum motor speeds and output torques apply for use in S1 continuous duty (ON time > 60 % or > 20 min). The gear unit temperature must not exceed 90 °C (194 °F).

Follow the instructions contained in the Configuration Manual for SIMOTICS S-1FT7 synchronous motors when assigning gearboxes to the motor.

#### Preconditions:

SP+ planetary gearboxes can be mounted with the following motor versions:

- Flange 1
- Plain motor shaft extension, shaft and flange accuracy tolerance N, without/with holding brake
- Vibration severity grade A/IP65 degree of protection

SP+ planetary gearboxes can therefore only be ordered with these 1FT7 motors:

1FT7...-5..71-...G1  
1FT7...-5..71-...H1  
1FT7...-7..71-...G1  
1FT7...-7..71-...H1

When ordering a motor with gearbox, **-Z** should be added to the order number.

#### Example:

1FT7042 motor without holding brake with single-stage SP+ planetary gearbox with  $i = 5$  and gear shaft without feather key.  
1FT7042-5AF71-1NG1-**Z**  
**J23**

✓ Possible

– Not possible

<sup>1)</sup> In relation to the output shaft center.

## Technical specifications

## SIMOTICS S-1FT7 motor with SP+ planetary gearbox

## Gearboxes for SIMOTICS S servomotors

### Planetary gearboxes series SP+ for SIMOTICS S-1FK7 synchronous motors

#### Overview

SIMOTICS S-1FK7 motor with mounted series SP+ planetary gearbox

SIMOTICS S-1FK7 motors can easily be combined with planetary gearboxes to form compact coaxial drive units. The gearboxes are flanged directly to the drive end of the motors.

When selecting the gearbox, ensure that its maximum permissible input speed is not exceeded by the maximum speed of the motor. In the case of high operating frequencies, allowance must be made for the factor  $f_2$  (see Configuration Manual, SIMOTICS S-1FK7 synchronous motors). The frictional losses of the gearbox must always be taken into account.

The gearboxes are only available in non-balanced design.

#### Benefits

- High efficiency  
Single-stage: > 97 %  
Two-stage: > 94 %
- Minimum torsional backlash  
Single-stage: ≤ 4 arcmin  
Two-stage: ≤ 6 arcmin
- Power transmission from the central sun wheel via planet wheels
- No shaft deflections in the planet wheel set due to symmetrical force distribution
- Very low moment of inertia and thus short acceleration times of the motors
- Output shaft bearings dimensioned for high cantilever and axial loads with preloaded tapered-roller bearings
- The gearboxes are connected to the motor shaft via an integrated clamping hub. A plain motor shaft extension is necessary for this purpose. Shaft and flange accuracy tolerance N in accordance with DIN 42955 and vibration severity grade A in accordance with EN 60034-14 are sufficient. The motor flange is adapted by means of adapter plates.
- Output shaft of gearbox exactly coaxial with the motor
- The gearboxes are enclosed (seal between gearbox and motor) and filled with oil at the factory. They are lubricated and sealed for their service life.  
The gearboxes are suitable for all mounting positions.
- Degree of protection of gearbox: IP65
- Small dimensions
- Low weight

#### Integration

SIMOTICS S-1FK702 to 1FK710 motors can be supplied ex factory (Siemens AG) complete with flange-mounted planetary gearbox.

The gearboxes assigned to the individual motors and gear ratios  $i$  available for these motor/gearbox combinations are listed in the subsequent selection table. When making a selection, account must be taken of the maximum permissible input speed of the gearbox (this is the same as the maximum motor speed).

The motor/gearbox combinations listed in the selection table are mainly intended for cycle operation S3-60% (ON time ≤ 60 % and ≤ 20 min). Reduced maximum motor speeds and output torques apply for use in S1 continuous duty (ON time > 60 % or > 20 min). The gear unit temperature must not exceed 90 °C (194 °F).

Follow the instructions contained in the Configuration Manual for SIMOTICS S-1FK7 synchronous motors when assigning gearboxes to the motor.

## Preconditions:

SP+ planetary gearboxes can be mounted with the following motor versions:

- Plain motor shaft extension, shaft and flange accuracy tolerance N, without/with holding brake
- IP65 degree of protection and anthracite paint finish

SP+ planetary gearboxes can therefore only be ordered with these 1FK7 motors:

1FK7 ■■■-■■■■■-■■■ 1

2A Compact G without brake  
 3B High H with brake  
 Inertia  
 4C High  
 Dynamic

or

1FK7 0 2 ■-5 A ■■■-■■■ 5

G without brake  
 H with brake

When ordering a motor with gearbox, **-Z** should be added to the order number.

## Example:

1FK7042 motor without holding brake with single-stage SP+ planetary gearbox

with  $i = 7$  and gear shaft without feather key.

1FK7042-2AF71-1AG1-**Z**

**J25**

✓ Possible

– Not possible

<sup>1)</sup> In relation to the output shaft center.

## Preconditions:

SP+ planetary gearboxes can be mounted with the following motor versions:

- Plain motor shaft extension, shaft and flange accuracy tolerance N, without/with holding brake
- IP65 degree of protection and anthracite paint finish

SP+ planetary gearboxes can therefore only be ordered with these 1FK7 motors:

1FK7 ■■■■-■■■■■-■■■ 1  
 2A Compact G without brake  
 3B High H with brake  
 Inertia  
 4C High  
 Dynamic

or

1FK7 0 2 ■-5 A ■■■■-■■■ 5  
 G without brake  
 H with brake

✓ Possible

– Not possible

<sup>1)</sup> In relation to the center of the output shaft at 100 rpm.

When ordering a motor with gearbox, **-Z** should be added to the order number.

## Example:

1FK7042 motor without holding brake with 2-stage SP+ planetary gearbox  
 with  $i = 28$  and gear shaft without feather key.

1FK7042-2AF71-1AG1-**Z**  
**J35**

#### Preconditions:

SP+ planetary gearboxes can be mounted with the following motor versions:

- Plain motor shaft extension, shaft and flange accuracy tolerance N, without/with holding brake
- IP65 degree of protection and anthracite paint finish

SP+ planetary gearboxes can therefore only be ordered with these 1FK7 motors:

1FK7 ■■■■-■■■■■-■■■ 1  
 2 A Compact G without brake  
 3 B High H with brake  
 Inertia  
 4 C High  
 Dynamic

or

1FK7 0 2 ■-5 A ■■■■-■■■ 5  
 G without brake  
 H with brake

When ordering a motor with gearbox, **-Z** should be added to the order number.

#### Example:

1FK7042 motor without holding brake with 2-stage SP+ planetary gearbox with  $i = 16$  and gear shaft without feather key.

1FK7103-2AC71-1AG1-**Z**

**J32**

✓ Possible

– Not possible

<sup>1)</sup> In relation to the output shaft center.

## Technical specifications

## SIMOTICS S-1FK7 motor with SP+ planetary gearbox

## Gearboxes for SIMOTICS S servomotors

### Planetary gearboxes series LP+ for SIMOTICS S-1FK7 synchronous motors

#### Overview

SIMOTICS S-1FK7 motor with mounted series LP+ planetary gearbox

SIMOTICS S-1FK7 motors can easily be combined with planetary gearboxes to form compact coaxial drive units. The gearboxes are flanged directly to the drive end of the motors.

When selecting the gearbox, ensure that its maximum permissible input speed is not exceeded by the maximum speed of the motor. In the case of high operating frequencies, allowance must be made for the factor  $f_2$  (see Configuration Manual, SIMOTICS S-1FK7 synchronous motors). The frictional losses of the gearbox must always be taken into account.

The gearboxes are only available in non-balanced design and with feather key.

#### Benefits

- High efficiency  
Single-stage: > 97 %
- Minimum torsional backlash  
Single-stage: ≤ 12 arcmin
- Power transmission from the central sun wheel via planet wheels
- No shaft deflections in the planet wheel set due to symmetrical force distribution
- The gearboxes are connected to the motor shaft via an integrated clamping hub. A plain motor shaft extension is necessary for this purpose. Shaft and flange accuracy tolerance N in accordance with DIN 42955 and vibration severity grade A in accordance with EN 60034-14 are sufficient. The motor flange is adapted by means of adapter plates.
- Output shaft of gearbox exactly coaxial with the motor
- The gearboxes are suitable for all mounted systems.
- The gearboxes are enclosed (seal between gearbox and motor) and filled with grease in the factory. They are lubricated and sealed for their service life.
- Degree of protection of gearbox: IP64
- Small dimensions
- Low weight

#### Integration

SIMOTICS S-1FK702 to 1FK710 motors can be supplied ex factory (Siemens AG) complete with flange-mounted planetary gearbox.

The gearboxes assigned to the individual motors and gear ratios  $i$  available for these motor/gearbox combinations are listed in the subsequent selection table. When making a selection, account must be taken of the maximum permissible input speed of the gearbox (this is the same as the maximum motor speed).

The motor/gearbox combinations listed in the selection table are mainly intended for cycle operation S3-60% (ON time ≤ 60 % and ≤ 20 min). Reduced maximum motor speeds and output torques apply for use in S1 continuous duty (ON time > 60 % or > 20 min). The gear unit temperature must not exceed 90 °C (194 °F).

Follow the instructions contained in the Configuration Manual for SIMOTICS S-1FK7 synchronous motors when assigning gearboxes to the motor.

## Preconditions:

LP+ planetary gearboxes can be mounted with the following motor versions:

- Plain motor shaft extension, shaft and flange accuracy tolerance N, without/with holding brake
- IP64 degree of protection and anthracite paint finish

LP+ planetary gearboxes can therefore only be ordered with these 1FK7 motors:

1FK7 ■■■-■■ . 7 1 - 1 . ■ 0

2A Compact G without brake

3B High H with brake

Inertia

4C High

Dynamic

or

1FK7 0 2 ■-5A . 7 1 - 1 . ■ 3

G without brake

H with brake

When ordering a motor with gearbox, -Z should be added to the order number.

## Example:

1FK7042 motor with holding brake with single-stage LP+ planetary gearbox with  $i = 5$  and gear shaft with feather key.

1FK7042-3BK71-1AH0-Z

V40

## Continuous duty

Continuous duty is permissible at the rated speed and rated torque. The gear unit temperature must not exceed 90 °C (194 °F).

## SIMOTICS L linear motors for SINAMICS S120

### SIMOTICS L-1FN3 synchronous linear motors – Water cooling

#### Overview

In combination with the SINAMICS S120 drive system, SIMOTICS L-1FN3 linear motors provide an optimally tuned linear direct drive system for the requirements of modern mechanical engineering.

The motors comprise a primary section and a secondary section with magnets made of rare-earth material. The primary section has fixed dimensions, while the secondary section is made up of individual elements (segments) to suit the required traversing range. Through parallel operation of the motors, feedrate force and length can be scaled beyond the available spectrum.

#### Benefits

- Outstanding dynamic response and very high traversing velocity
- Excellent precision
- Simple installation
- Drive components are free of wear thanks to contactless drive force transmission

The main advantage of linear direct drive technology is the extensive avoidance of the effects of elasticity, backlash and friction, as well as natural oscillation in the drive train. This results in a higher dynamic response and increased precision. If suitable measuring systems are used and the temperature conditions are appropriate, the motors can be positioned in the nanometer range.

#### Design

The simple mechanical construction without transmission elements, such as ballscrew, coupling or belt, enhances the reliability of the drive components.

Heat loss occurs almost exclusively in the primary section and is dissipated via an integrated liquid cooling system. The Thermo-Sandwich dual-circuit cooling system permits both a thermal decoupling of the motor from the machine, and also a low-priced cooling design.

The stainless metal encapsulation of the primary section ensure the high mechanical ruggedness and resistance to soiling required for use in machine tools, as well as high resistance to corrosive liquids. In addition, the motor places minimal demands on the preparation of mounting surfaces thanks to the large air gap. The mounting tolerances for the air gap are  $\pm 0.3$  mm (0.012 in).

#### Design variants

SIMOTICS L-1FN3 linear motors are available as single-sided or double-sided motors.

- **Single-sided motors**  
The single-sided version consists of a primary section that is mounted parallel to the associated secondary section.
- **Double-sided motors**  
The special secondary section of the double-sided version lies between two primary sections (one primary section with standard winding and one with complementary winding). The design as a double-sided motor is particularly suitable for applications with movable secondary section and small traversing paths with fast acceleration, e.g. non-circular machining.

#### Application

##### Version for peak load

Used in machine axes that are temporarily accelerated, e.g. S3 duty or when large forces are required for a short time.

Typical applications:

- High-dynamic and flexible machine tool construction
- Laser machining
- Handling

##### Version for continuous load

Used in machine axes with constant acceleration changes, e.g. S1 duty, with high process/weight forces or for operation without water cooling.

Typical applications:

- Grinding
- Non-circular machining (e.g. oscillating applications)
- Z axes without weight compensation, quills
- Handling, Cartesian robots

The SIMOTICS L-1FN3 linear motors have an overload range available for acceleration processes. The maximum force  $F_{MAX}$  can only be utilized up to a maximum velocity  $v_{MAX}(F_{MAX})$ ; up to velocity  $v_{MAX}(F_{rated})$  only the feedrate force  $F_{rated}$  is available.

#### Type of connection:

1FN3100 to 1FN3900 motors

Connection cover prepared for separate power and signal cables

**B**

1FN3050 motor

Permanently connected power and signal cables with exposed core ends  
Length: 2 m (6.56 ft)

**E**

1FN3050 motor

Permanently connected power and signal cables pre-assembled, with  
connectors  
Length: 0.5 m (1.64 ft)

**F**

Description

Order No.

#### Signal cable, pre-assembled with M17 connector<sup>8)</sup>

- 1FN3100/1FN3150 motors
- 1FN3300 to 1FN3900 motors

<sup>1)</sup> For water cooling with inlet temperature 35 °C (95 °F).

<sup>2)</sup> A reduction of up to 30 % must be expected in case of motor standstill, at very low velocities, or with very short traverse paths.

<sup>3)</sup> Velocity values refer to a DC link voltage of the drive system of 600 V DC.

<sup>4)</sup> No precision cooler available.

<sup>5)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>6)</sup> Permanently connected power and signal cables, length 2 m (6.56 ft), with exposed core ends:

<sup>7)</sup> Permanently connected power and signal cables, length 0.5 m (1.64 ft), with power connector size 1 and M17 signal connector.

<sup>8)</sup> For length code, refer to section MOTION-CONNECT connection systems.

**Cooling:**  
Internal air cooling 0  
External air cooling 1

**Motor Module:**  
Single Motor Module 1  
Double Motor Module 2

.... Length code<sup>7)</sup> ....

More information about cables can be found under MOTION-CONNECT connection systems.

<sup>1)</sup> For water cooling with inlet temperature 35 °C (95 °F).

<sup>2)</sup> A reduction of up to 30 % must be expected in case of motor standstill, at very low velocities, or with very short traverse paths.

<sup>3)</sup> Velocity values refer to a DC link voltage of the drive system of 600 V DC.

<sup>4)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>5)</sup> Sold by the meter only (4 × 16 mm<sup>2</sup>). Connected to primary section with 16 mm<sup>2</sup> (< 1.5 m (4.92 ft)) then routed onwards through terminal box with 25 mm<sup>2</sup>.

<sup>6)</sup> Sold by the meter only (4 × 25 mm<sup>2</sup>).

<sup>7)</sup> For length code, refer to section MOTION-CONNECT connection systems.

#### Type of connection:

1FN3100 to 1FN3900 motors

Connection cover prepared for separate power and signal cables

**B**

1FN3050 motor

Permanently connected power and signal cables with exposed core ends

**E**

Length: 2 m (6.56 ft)

1FN3050 motor

Permanently connected power and signal cables pre-assembled, with connectors

**F**

Length: 0.5 m (1.64 ft)

Description

Order No.

#### Signal cable, pre-assembled with M17 connector<sup>7)</sup>

- 1FN3100/1FN3150 motors
- 1FN3300 to 1FN3900 motors

<sup>1)</sup> For water cooling with inlet temperature 35 °C (95 °F).

<sup>2)</sup> A reduction of up to 30 % must be expected in case of motor standstill, at very low velocities, or with very short traverse paths.

<sup>3)</sup> Velocity values refer to a DC link voltage of the drive system of 600 V DC.

<sup>4)</sup> Power modules are designed for feed rate force  $F_{\text{rated}}$ . If feed rate force  $F_{\text{MAX}}$  is utilized, the next largest power module must be used. If a power module with a higher rating is used, you must check whether the specified power cable can be connected to it.

<sup>5)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>6)</sup> Permanently connected power and signal cables.

<sup>7)</sup> For length code, refer to section MOTION-CONNECT connection systems.

<sup>1)</sup> Integrated cover for several secondary sections. The maximum length of the secondary section cover is 6 m (19.7 ft). For the following motors, this corresponds to: 1FN3050 to 1FN3150, a maximum number of 50 secondary sections (AB to FA). 1FN3300 to 1FN3900, a maximum number of 32 secondary sections (AB to DC).

<sup>2)</sup> The secondary section end pieces are designed to allow clamping of the integrated secondary section cover.

<sup>3)</sup> 1FN3050 to 1FN3450 motors:  
2 units required per secondary section track.  
1FN3600 to 1FN3900:  
3 units per secondary section track.  
The maximum available length of a single-part heatsink profile is 3 m (9.84 ft).  
For the following motors, this corresponds to:  
1FN3050 to 1FN3150, a maximum of 24 secondary sections (AB to CE)  
1FN3300 to 1FN3900, a maximum of 16 secondary sections (AB to BG).

<sup>4)</sup> Available only in length AC (equals 2 secondary sections). The difference in the secondary section track length must be compensated through assembly with the heatsink profile 1FN300.-0TK04-1..0.

## Direct drives

### SIMOTICS L linear motors for SINAMICS S120

#### SIMOTICS L-1FN3 synchronous linear motors Hall-effect sensor box

##### Overview

The motor position can be identified with an incremental linear measuring system using an additional hall-effect sensor box, or also motion-based if certain supplementary conditions are taken into account.

##### Selection and ordering data

| Linear motors                                               | Hall-effect sensor box    |                           |

## More information

These are non-Siemens products whose fundamental suitability is familiar to us. It goes without saying that equivalent products from other manufacturers may be used. Our recommendations are to be seen as helpful information, not as requirements or dictates. We do not warrant the composition, nature, state or quality of non-Siemens products.

Please get in touch with the contact persons of the cooler manufacturers listed below for technical information.

## SIMOTICS L linear motors for SINAMICS S120

### SIMOTICS L-1FN6 synchronous linear motors

#### Overview

In combination with the SINAMICS S120 drive system, 1FN6 linear motors provide an optimally tuned linear direct drive system for the requirements of modern mechanical engineering.

The SIMOTICS L-1FN6 motors comprise a primary section and a secondary section equipped with magnets which are not made of rare-earth material – in contrast to the current synchronous linear motor technology. The primary section has fixed dimensions, while the secondary section is made up of individual elements (segments) to suit the required traversing range. Through parallel operation of the motors, feedrate force and length can be scaled beyond the available spectrum.

#### Benefits

- High dynamic response and very high traversing velocity
- Excellent precision
- Very easy installation due to magnet-free secondary section track
- Drive components are free of wear thanks to contactless drive force transmission

The main advantages of linear direct drive technology are the extensive avoidance of

- Effects of elasticity, backlash and friction
- Natural oscillation in the drive train

This results in a higher dynamic response and increased precision. If suitable measuring systems are used and the temperature conditions are appropriate, the motors can be positioned in the nanometer range.

#### Design

The simple mechanical construction without transmission elements, such as ballscrew, coupling or belt, enhances the reliability of the drive components.

Heat loss occurs almost exclusively in the primary section and is dissipated via the optimized housing type.

In addition, the 1FN6003/1FN6007 motors are available with water cooling.

The stainless metal encapsulation of the primary section achieves the high mechanical ruggedness and resistance to soiling required for use in machine tools, as well as high resistance to corrosive liquids. The motor places minimal demands on the preparation of mounting surfaces thanks to the large air gap. The mounting tolerances for the air gap are  $\pm 0.3$  mm (0.012 in).

#### Design variant

SIMOTICS L-1FN6 linear motors are constructed as single-sided motors. The primary section is mounted parallel to the associated secondary section. Several primary sections can traverse one secondary section track.

#### Application

Typical applications:

- Linear axes with traverse paths of approx. 4 m (13.1 ft) or more
- Handling and concatenated axes in the area of machine tools and production machines
- High-dynamic and high-precision feed axes in water jet and laser cutting machines
- Applications that require a non-magnetic secondary section track

## Technical specifications

## Characteristic curves

The SIMOTICS L-1FN6 linear motors have an overload range available for acceleration processes. The maximum force  $F_{\text{MAX}}$  can only be utilized up to a maximum velocity  $v_{\text{MAX}}(F_{\text{MAX}})$  up to velocity  $v_{\text{MAX}}(F_{\text{rated}})$  only the feedrate force  $F_{\text{rated}}$  is available (see footnotes for selection and ordering data).

#### Type of connection:

1FN6003 motors

Permanently connected power and signal cables pre-assembled with connectors  
Length: 0.5 m (1.64 ft)

F

1FN6007 motors

Two separate integrated sockets, for power and signal cable

K

#### Secondary section:

Length: 200 mm (7.87 in)  
Length: 500 mm (19.69 in)

<sup>1)</sup> The continuous thermal feedrate force  $F_{rated, th}$ , that the linear motor can achieve, depends on the installation position and ambient conditions and the cooling efficiency that is achieved. Large cooling surfaces and/or high air flow speeds ensure that the linear motors achieve a higher continuous thermal current  $I_{rated, th}$  and therefore a higher feedrate force. The winding is protected against overloading by means of temperature monitoring circuits. Selection of the Motor Modules and power cables is based on increased continuous current. If a lower continuous current is required in the application, where necessary, a Motor Module with a lower rating and the appropriate power cable can be used.

<sup>2)</sup> The rated feedrate force  $F_{rated}$  and the corresponding rated current  $I_{rated}$  specify values that are typically achieved. The values refer to a black aluminum plate to which the motor is bolted. The radiation surface of the plate is three times the size of the area to which the primary section is bolted.

<sup>3)</sup> A reduction of up to 30 % must be expected in case of motor standstill, at very low velocities, or with very short traverse paths.

<sup>4)</sup> Velocity values refer to a DC link voltage of the drive system of 600 V DC.

<sup>5)</sup> The Motor Module is selected on the basis of the maximum current  $I_{MAX}$ . In some cases, to fully utilize the feedrate force  $F_{MAX}$  the next largest Motor Module must be used. If a Motor Module with a higher rating is used, you must check whether the specified power cable can be connected to it.

<sup>6)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>7)</sup> For length code, refer to section MOTION-CONNECT connection systems.

More information about cables can be found under MOTION-CONNECT connection systems.

<sup>1)</sup> The continuous thermal feedrate force  $F_{rated, th}$ , that the linear motor can achieve, depends on the installation position and ambient conditions and the cooling efficiency that is achieved. Large cooling surfaces and/or high air flow speeds ensure that the linear motors achieve a higher continuous thermal current  $I_{rated, th}$  and therefore a higher feedrate force. The winding is protected against overloading by means of temperature monitoring circuits. Selection of the Motor Modules and power cables is based on increased continuous current. If a lower continuous current is required in the application, where necessary, a Motor Module with a lower rating and the appropriate power cable can be used.

<sup>2)</sup> The rated feedrate force  $F_{rated}$  and the corresponding rated current  $I_{rated}$  specify values that are typically achieved. The values refer to a black aluminum plate to which the motor is bolted. The radiation surface of the plate is three times the size of the area to which the primary section is bolted.

<sup>3)</sup> A reduction of up to 30 % must be expected in case of motor standstill, at very low velocities, or with very short traverse paths.

<sup>4)</sup> Velocity values refer to a DC link voltage of the drive system of 600 V DC.

<sup>5)</sup> The Motor Module is selected on the basis of the maximum current  $I_{MAX}$ . In some cases, to fully utilize the feedrate force  $F_{MAX}$  the next largest Motor Module must be used. If a Motor Module with a higher rating is used, you must check whether the specified power cable can be connected to it.

<sup>6)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>7)</sup> For length code, refer to section MOTION-CONNECT connection systems.

## SIMOTICS T torque motors for SINAMICS S120

### SIMOTICS T-1FW6 synchronous built-in torque motors

#### Overview

Built-in torque motors SIMOTICS T-1FW6 are liquid-cooled, multi-pole permanent-magnet AC synchronous motors with hollow-shaft rotor. The SIMOTICS T-1FW6 motors are supplied as built-in components that are held together in the delivered state by transport locks. For a complete drive unit, an additional bearing and shaft encoder are required.

Each frame size is available in different axis lengths. Most stators and rotors are equipped with flanges at each end with centering surfaces and threaded holes for installation in the machine.

**Please note that when SIMOTICS T-1FW6 direct motors (torque motors) are used in fork heads for machine tools or robots, a license for US patent US5584621 and the associated international patent protection may be required. Please observe the national and international licensing conditions when using direct motors so that no infringements of industrial property rights occur.**

#### Application

In conjunction with the SINAMICS S120 drive system, the built-in torque motors can be used as direct drive for the following machine applications:

- Rotary indexing machines, rotary tables, swivel axes
- Rotary axes (A, B, C axis in 5-axis machine tools)
- Turret indexing and cylinder indexing for single-spindle and multi-spindle machines
- Dynamic tool magazines
- Rotating spindles in milling machines
- Roller and cylinder drives
- Infeed and handling axes

#### Benefits

- No elasticity in the drive train
- High availability, since there are no gear components subject to wear in the drive train
- High torque, compact design and low construction volume
- Low moment of inertia
- Direct coupling to the machine using flanges

#### Design

The SIMOTICS T-1FW6 built-in torque motor comprises the following components:

##### Stator

Iron core with a 3-phase AC winding. To improve dissipation of the heat loss, the motor can be force-cooled by means of a liquid cooler (main cooler).

##### Rotor

Cylindrical hollow shaft made of steel with permanent magnets fixed to the circumference.

If the main cooler and precision cooler are used together in a cooling unit, a cooling connection adapter (accessory) can be ordered separately for simpler connection.

##### Cooler types

The design of the cooling system is dependent on the size (external diameter) of the motor.

| SIMOTICS T-1FW6 motor Type | Type of cooling                         |
|----------------------------|-----------------------------------------|
| 1FW6050 and 1FW6060        | Integrated cooling (1 cooling circuit)  |
| 1FW6090 to 1FW6150         | Jacket cooling                          |
| 1FW6160 to 1FW6290         | Integrated cooling (2 cooling circuits) |

##### Motors with jacket cooling

The coolant inlet/return flow circuit must be provided by the machine manufacturer in the surrounding construction.

Motor components of sizes 1FW6090 to 1FW6150 with jacket cooling (rotor, stator)

## SIMOTICS T torque motors for SINAMICS S120

## SIMOTICS T-1FW6 synchronous built-in torque motors

## Design (continued)

Motors with integrated single-circuit cooling

These motors have a ready-to-connect, integrated single-circuit cooling system; they are compact and therefore suitable for easy integration in a machine.

Motor components of sizes 1FW6050 and 1FW6060 with integrated single-circuit cooling (rotor, stator)

Motors with integrated dual-circuit cooling

These motors feature a ready-to-connect, integrated dual-circuit cooling system and are therefore thermally insulated against the mechanical axis construction to a considerable extent.

Motor components of sizes 1FW6160 to 1FW6290 with integrated dual-circuit cooling (rotor, stator)

## Integration

The 1FW6 motors which must be fed from the SINAMICS S120 drive system are designed for operation on a 600 V DC link voltage level and require a sinusoidal current.

The cable connection is brought out of the front face of the stator and the free cable end must be connected to a terminal box provided by the machine manufacturer. The length of the power and signal cables from the motor to the drive system must not exceed 50 m (164 ft).

## Technical specifications

| <b>Degree of protection to DIN EN 60034-5</b>                   | IP23<br>The final degree of protection (minimum degree of protection is IP54) for the installed motor is determined by the machine manufacturer. Protection against touch, foreign bodies and water for electrical equipment is specified in accordance with IEC 60034-5.                                                                                                                                                                |

More information about cables can be found under MOTION-CONNECT connection systems.

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ±10 % (drive system DC link voltage 600 V DC).

3) In case of water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) Selection optimized to size of the Motor Module. The next higher Motor Module offers 100 % torque utilization.

5) For type of connection with exposed core ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately (see Accessories).

6) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ±10 % (drive system DC link voltage 600 V DC).

3) In case of water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) Selection optimized to size of the Motor Module. The next higher Motor Module offers 100 % torque utilization.

5) For type of connection with exposed core ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately (see Accessories).

6) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

# Direct drives

## SIMOTICS T torque motors for SINAMICS S120

### SIMOTICS T-1FW6 synchronous built-in torque motors Water cooling

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ±10 % (drive system DC link voltage 600 V DC).\*

3) In case of water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) For type of connection with exposed core ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately (see Accessories).

5) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

# Direct drives

## SIMOTICS T torque motors for SINAMICS S120

### SIMOTICS T-1FW6 synchronous built-in torque motors Water cooling

More information about cables can be found under MOTION-CONNECT connection systems.

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ± 10 % (drive system DC link voltage 600 V DC).\*

3) In case of water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) For type of connection with exposed core ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately (see Accessories).

5) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

# Direct drives

## SIMOTICS T torque motors for SINAMICS S120

**Cable outlet** only for 1FW6160 to 1FW6290:

Axial

Radially outwards

Tangential (only for types of connection C and D)

W  
V  
T

#### Type of connection:

Permanently connected power and signal cables with exposed core ends<sup>4)</sup>

Length: 2 m (6.56 ft)

Permanently connected power and signal cables pre-assembled with connectors

Length: 0.5 m (1.64 ft)

C  
D

#### Type of connection only for specific motors (Not configurable):

Permanently connected power and signal cables with exposed core ends<sup>4)</sup>

Length: 1 m (3.28 ft)

B

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ±10 % (drive system DC link voltage 600 V DC).<sup>4)</sup>

3) In case of water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) For type of connection with exposed core ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately (see Accessories).

5) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

# Direct drives

**Cable outlet only** for 1FW6160 to 1FW6290:

Axial  
Radially outwards  
Tangential (only for types of connection C and D)

W  
V  
T

#### Type of connection:

Permanently connected power and signal cables with exposed core ends<sup>4)</sup>  
Length: 2 m (6.56 ft)  
Permanently connected power and signal cables pre-assembled with connectors  
Length: 0.5 m (1.64 ft)

C  
D  
B

#### Type of connection only for specific motors (Not configurable):

Permanently connected power and signal cables with exposed core ends<sup>4)</sup>  
Length: 1 m (3.28 ft)

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ±10 % (drive system DC link voltage 600 V DC).

3) In case of water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) For type of connection with exposed core ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately (see Accessories).

5) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

## Main spindle motors

### SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

#### SIMOTICS M-1PH8 asynchronous motors

##### Overview

SIMOTICS M-1PH8 motors are compact squirrel-cage asynchronous motors with IP55/IP65 degree of protection and they extend or replace the current range of the well-proven 1PH/1PM series. SIMOTICS M-1PH8 motors are available in two different cooling types:

- Forced ventilation
- Water cooling

The motors have been designed specifically for use in conjunction with the SINAMICS S120 drive system. Depending on the control requirements, appropriate encoder systems are available for the motors for sensing the motor speed and indirect position.

For machine tools, the encoder system is capable of C-axis operation as standard – i.e. an additional encoder is not required for C-axis operation.

##### Benefits

- Wide range of power ratings
- The right design for any application
  - Forced ventilation or water cooling
  - Solid or hollow shaft
  - Various bearing concepts
  - Different encoder types for speed control and high-precision positioning
- Excellent performance features
  - Maximum speeds up to 20000 rpm
  - Excellent rotational accuracy of up to 10  $\mu$ m
  - Excellent vibration severity
  - High dynamic response (short acceleration times)
- Low noise emissions
- Simple and flexible connection system
- Commissioning with electronic rating plate and DRIVE-CLiQ interface

Water cooling always brings benefits:

- With applications in which extreme ambient conditions, such as high temperatures, dust, dirt, or a corrosive atmosphere, do not permit air cooling
- In processes in which the environment must not be heated

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

## SIMOTICS M-1PH8 asynchronous motors

## Application

- Compact machine tools
- Complex machining centers and turning machines
- Fully encapsulated milling machines
- High-load milling spindles
- Counterspindles or power tools for turning machines
- Direct power tools with internal cooling
- Special-purpose machines

## Characteristic curves

Typical speed/power graph for SIMOTICS M-1PH8 motors<sup>1)</sup>

The graph shows the typical relationship between motor speed and drive power for SIMOTICS M-1PH8 motors for duty type S1 (continuous duty) in accordance with IEC 60034-1.

Data for short-time duty S2 and continuous duty S6 is listed in the 1PH8 Motors Configuration Manual.

<sup>1)</sup> For further configuration information, see the 1PH8 Motors Configuration Manual.

For versions, see Order No. supplement and options.

The values in the selection and ordering data, particularly for the constant power range with speed  $n_2$ , apply when using an Active Line Module with 400 V 3 AC.  
When using a Smart Line Module, proceed according to 1PH8 Motors Configuration Manual.

<sup>1)</sup> Speed data are based on an infeed with Active Line Module (see characteristic curves); the maximum speed of the encoders must be observed.

<sup>2)</sup> Bearing version for Standard (14th data position B to D).

<sup>3)</sup> Bearing version for Performance (14th data position L).

<sup>4)</sup> Bearing version for High Performance (14th data position M).

<sup>5)</sup>  $n_2$ : max. permissible thermal speed at constant output or speed, which is at the voltage limit when  $P = P_{rated}$ .

<sup>6)</sup> Extra weight for version with hollow shaft approx. 2.5 kg (5.51 lb).<sup>7)</sup> Compliance with the rated pulse frequencies is essential; the rated motor data is valid for 4 kHz.<sup>8)</sup> The rated output current of the Motor Module is lower than the rated motor current at 4 kHz.

# Main spindle motors

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 asynchronous motors SH 100/SH 132 – Forced ventilation

For versions, see Order No.  
supplement and options.

6

The values in the selection and ordering data, particularly for the constant power range with speed  $n_2$ , apply when using an Active Line Module with 400 V 3 AC.  
When using a Smart Line Module, proceed according to 1PH8 Motors Configuration Manual.

<sup>1)</sup> Speed data are based on an infeed with Active Line Module (see characteristic curves); the maximum speed of the encoders must be observed.

<sup>2)</sup> Bearing version for Standard (14th data position B to D).

<sup>3)</sup> Bearing version for Performance (14th data position L).

<sup>4)</sup> Bearing version for high performance (14th data position M).

<sup>5)</sup>  $n_2$ : max. permissible thermal speed at constant output or speed, which is at the voltage limit when  $P = P_{\text{rated}}$ .

<sup>6)</sup> Extra weight for version with hollow shaft approx. 2.5 kg (5.51 lb).

<sup>7)</sup> Compliance with the rated pulse frequencies is essential; the rated motor data is valid for 4 kHz.

For versions, see Order No. supplement and options.

The values in the selection and ordering data, particularly for the constant power range with speed  $n_2$ , apply when using an Active Line Module with 400 V 3 AC.

When using a Smart Line Module, proceed according to 1PH8 Motors Configuration Manual.

<sup>1)</sup> Speed data are based on an infeed with Active Line Module (see characteristic curves); the maximum speed of the encoders must be observed.

<sup>2)</sup> Bearing version for Standard (14th data position B to D).

<sup>3)</sup> Bearing version for Performance (14th data position L).

<sup>4)</sup>  $n_2$ : max. permissible thermal speed at constant output or speed, which is at the voltage limit when  $P = P_{\text{rated}}$ .

<sup>5)</sup> Compliance with the rated pulse frequencies is essential; the rated motor data is valid for 4 kHz or 2 kHz.

<sup>6)</sup> The rated output current of the Motor Module is lower than the rated motor current at 4 kHz or 2 kHz.

# Main spindle motors

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 asynchronous motors SH 80 to SH 160 – Water cooling

For versions, see Order No. supplement and options.

The values in the selection and ordering data, particularly for the constant power range with speed  $n_2$ , apply when using an Active Line Module with 400 V 3 AC.  
When using a Smart Line Module, proceed according to 1PH8 Motors Configuration Manual.

<sup>1)</sup> Speed data are based on an infeed with Active Line Module (see characteristic curves); the maximum speed of the encoders must be observed.

<sup>2)</sup> Bearing version for Standard (14th data position B to D).

<sup>3)</sup> Bearing version for Performance (14th data position L).

<sup>4)</sup> Bearing version for High-Performance (14th data position M).

<sup>5)</sup>  $n_2$ : max. permissible thermal speed at constant output or speed, which is at the voltage limit when  $P = P_{\text{rated}}$ .

<sup>6)</sup> Extra weight for version with hollow shaft approx. 2.5 kg (5.51 lb).

<sup>7)</sup> Compliance with the rated pulse frequencies is essential; the rated motor data is valid for 4 kHz.

# Main spindle motors

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 asynchronous motors SH 180 to SH 280 – Water cooling

For versions, see Order No. supplement and options.

The values in the selection and ordering data, particularly for the constant power range with speed  $n_2$ , apply when using an Active Line Module with 380 V 3 AC.  
When using a Smart Line Module, proceed according to 1PH8 Motors Configuration Manual.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

3

## Cooling:

Internal air cooling  
External air cooling0  
1

## Motor Module:

Single Motor Module

1

1) Speed data are based on an infeed with Active Line Module (see characteristic curves); the maximum speed of the encoders must be observed.

2) Bearing version for Standard (14th data position B to D).

3) Bearing version for Performance (14th data position L).

4)  $n_2$ : max. permissible thermal speed at constant output or speed, which is at the voltage limit when  $P = P_{\text{rated}}$ .

5) Compliance with the rated pulse frequencies is essential; the rated motor data is valid for 4 kHz or 2 kHz.

6) The rated output current of the Motor Module is lower than the rated motor current at 4 kHz or 2 kHz.

<sup>1)</sup> Limited to  $n_{\max} = 12000$  rpm.

<sup>2)</sup> Limited to  $n_{\max} = 15000$  rpm.

<sup>3)</sup> Only possible with 14th data position L or M and 9th data position L or V.

<sup>4)</sup> For definition of the vibration severity according to Siemens, see 1PH8 Motors Configuration Manual.

<sup>5)</sup> For 1PH808 limited to  $n_{\max} = 15000$  rpm.  
For 1PH810 limited to  $n_{\max} = 12000$  rpm.  
For 1PH813 limited to  $n_{\max} = 10000$  rpm.  
For 1PH816 limited to  $n_{\max} = 9000$  rpm.

<sup>6)</sup> With 1PH816 not possible with 12th data position 2 (IM B5 type of construction).

<sup>7)</sup> For 1PH808 limited to  $n_{\max} = 20000$  rpm. For 1PH810 limited to  $n_{\max} = 18000$  rpm. For 1PH813 limited to  $n_{\max} = 15000$  rpm. For 1PH816 limited to  $n_{\max} = 10000$  rpm.

<sup>8)</sup> Not possible with 10th data position S (star delta circuit).

<sup>9)</sup> For 1PH808/1PH810 limited to  $n_{\max} = 5000$  rpm.  
For 1PH813 limited to  $n_{\max} = 4500$  rpm.  
For 1PH816 limited to  $n_{\max} = 4000$  rpm.

<sup>10)</sup> For 1PH810, power connector is only possible up to a maximum stall current of  $I_0 = 36$  A.  
For 1PH813, power connector is only possible up to a maximum stall current of  $I_0 = 85$  A. Power connector not possible for 1PH816.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

SIMOTICS M-1PH8 asynchronous motors – Order No. supplement  
SH 180/SH 225/SH 280 – Forced ventilation/Water cooling

1) Limited to  $n_{\max} = 3000$  rpm. Not possible with 14th data position L (Performance bearing).2) Limited to  $n_{\max} = 2500$  rpm. Not possible with 14th data position L (Performance bearing).3) Limited to  $n_{\max} = 2000$  rpm. Not possible with 14th data position L (Performance bearing).

4) Only possible with 14th data position B (Standard bearing).

5) For definition of the vibration severity according to Siemens, see 1PH8 Motors Configuration Manual.

6) For 1PH818 limited to  $n_{\max} = 7500$  rpm. Not possible with 12th data position 2 (IM B5 type of construction).  
For 1PH822 limited to  $n_{\max} = 6000$  rpm. Not possible with 12th data position 2 (IM B5 type of construction).

For terminal box type **1XB7700-P02** other cable entries (power) can be ordered via P options, depending on the standard:

**P00** Undrilled cable entry plate  
**P01** Cable entry plate 3 × M63 × 1.5

For terminal box types **1XB7322-P05** and **1XB7422-P06**, another cable entry (power) can be ordered via the P option, depending on the standard:

**P00** Undrilled cable entry plate

For options **K09** and **K10**, instead of terminal box **gk863**, terminal box **gk873** is used mounted on the side.

For options **K09** or **K10**, instead of terminal box **gk833**, terminal box **gk843** is used mounted on the side.

For options **K09** and **K10**, instead of terminal box **gk813**, terminal box **gk823** is used mounted on the side.

<sup>1)</sup> Thread M16 × 1.5 arranged with 90° to signal connection; thread only for options A12, A25 and 9th data position A (without encoder).

<sup>2)</sup> Thread M16 × 1.5 arranged opposite to the signal connection (lateral to the cable entry plate); thread only for option A12 and encoder version A (without encoder).

<sup>3)</sup> Dependent on the design of the metric cable gland.

<sup>4)</sup> Current-carrying capacity based on EN 60204-1/IEC 60364-5-52 with installation type E.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 synchronous motors

#### Overview

SIMOTICS M-1PH8 motors are compact permanent-magnet synchronous motors with IP55/IP65 degree of protection and they extend/replace the current range of the well-proven 1FT series. The motors are available in different cooling types:

- Forced ventilation for SH 132 to SH 225
- Water cooling for SH 132 to SH 225

The motors have been designed specifically for use in conjunction with the SINAMICS S120 drive system. Depending on the control requirements, appropriate encoder systems are available for the motors for sensing the motor speed and indirect position.

#### Characteristic curves

Typical speed/power graph for synchronous motors SIMOTICS M-1PH8<sup>1)</sup>

The graph shows the typical relationship between motor speed and drive power for SIMOTICS M-1PH8 motors for duty type S1 (continuous duty) in accordance with IEC 60034-1.

Data for short-time duty S2 and continuous duty S6 is listed in the 1PH8 Motors Configuration Manual.

6

#### Benefits

- Wide range of power ratings
- Different bearing designs
- Different encoder types for speed control and high-precision positioning
- Excellent performance features
  - Excellent rotational accuracy
  - Excellent vibration severity
  - High dynamic response (short acceleration times)
- Low noise emissions
- Simple, flexible connection system
- Commissioning with electronic rating plate and DRIVE-CLiQ interface

#### Application

- As feed motors in machine tools
- Machines with high requirements in terms of dynamic performance and precision, e.g.:
  - Packaging machines
  - Servo presses
  - Printing machines
  - Cross cutters

<sup>1)</sup> For further configuration information, see the 1PH8 Motors Configuration Manual.

<sup>1)</sup> DE is the drive end with shaft. NDE is the non-drive end.

<sup>2)</sup> With water cooling – due to the formation of condensation – the ambient temperature may be a maximum of 5K above that of the coolant inlet temperature.

<sup>3)</sup> The following motors are designed to conform to temperature class 155 (F):

1PH8138-2.F2/1PH8138-2.G2  
1PH8164/1PH8166/1PH8168

<sup>4)</sup> For rated pulse frequency of 4 kHz and speed range up to 5000 rpm.

<sup>5)</sup> For rated pulse frequency of 4 kHz or 2 kHz and speed range up to 5000 rpm (1PH818) or 3500 rpm (1PH822).

<sup>6)</sup> For rated pulse frequency of 4 kHz or 2 kHz and speed range up to 5000 rpm (1PH818) or 4500 rpm (1PH822).

<sup>7)</sup> Shaft extension run-out, concentricity of centering ring and shaft, and perpendicularity of flange to shaft.

## Format:

Booksize

1

## Cooling:

Internal air cooling  
External air cooling

0

1

## Motor Module:

Single Motor Module

1

1) Maximum speed that must not be exceeded.

2) Maximum permissible operating speed based on the induced voltage in the motor and the voltage stability of the Motor Module (without protective circuit).

3) For duty type S1.

4) The rated pulse frequencies must be taken into account. The rated motor data is valid for 4 kHz.

5) Above approx. 85 A, connection type "Power connector top" is not possible (15th data position E to H).

1) Maximum speed that must not be exceeded.

2) Maximum permissible operating speed based on the induced voltage in the motor and the voltage stability of the Motor Module (without protective circuit).

3) For duty type S1.

4) The rated pulse frequencies must be taken into account. The rated motor data is valid for 4 kHz.

5) At 4 kHz, the rated output current of the Motor Module is lower than the rated motor current or the motor stall current.

# Main spindle motors

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 synchronous motors SH 180/SH 225 – Forced ventilation

<sup>1)</sup> Maximum speed that must not be exceeded.

<sup>2)</sup> Maximum permissible operating speed based on the induced voltage in the motor and the voltage stability of the Motor Module (without protective circuit).

<sup>3)</sup> For duty type S1.

<sup>4)</sup> The rated pulse frequencies must be taken into account. The rated motor data is valid for 4 kHz (booksize format) or 2 kHz (chassis format).

<sup>5)</sup> At 2 kHz, the rated output current of the Motor Module is lower than the rated motor current or the motor stall current.

# Main spindle motors

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 synchronous motors SH 180/SH 225 – Water cooling

| Internal air cooling | 0 |  |
| External air cooling | 1 |  |
| <b>Motor Module:</b> |   |  |
| Single Motor Module  | 1 |  |

1) Maximum speed that must not be exceeded.

2) Maximum permissible operating speed based on the induced voltage in the motor and the voltage stability of the Motor Module (without protective circuit).

3) For duty type S1.

4) The rated pulse frequencies must be taken into account. The rated motor data is valid for 4 kHz (booksize format) or 2 kHz (chassis format).

5) At 2 kHz, the rated output current of the Motor Module is lower than the rated motor current or the motor stall current.

# Main spindle motors

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8 synchronous motors – Order No. supplement SH 132/SH 160 – Forced ventilation/Water cooling

#### Selection and ordering data

<sup>1)</sup> For definition of the vibration severity according to Siemens, see 1PH8 Motors Configuration Manual.

<sup>2)</sup> For 1PH813 limited to  $n_{\max} = 4500$  rpm.  
For 1PH816 limited to  $n_{\max} = 4000$  rpm.

<sup>3)</sup> For the 1PH813, power connector only possible up to a maximum stall current of  $I_0 = 85$  A.  
Power connector not possible for 1PH816.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

1) For 1PH818 continuous speed  $n_{\max} = 3000$  rpm.  
For 1PH822 continuous speed  $n_{\max} = 2500$  rpm.

2) For 1PH818 with flange A450.  
For 1PH822 with flange A550.

3) For definition of the vibration severity according to Siemens, see 1PH8 Motors Configuration Manual.

<sup>1)</sup> With options K09 or K10, a different terminal box type is used for side mounting. gk843 is used instead of gk833.  
Only possible for IM B3 or IM B35 types of construction.

<sup>2)</sup> Only appropriate if oil spray or oil vapor is occasionally deposited on the sealing ring.

<sup>3)</sup> Regardless of the degree of protection, at high levels of atmospheric pollution, the fan must be cleaned.

For terminal box type **1XB7700-P02** other cable entries (power) can be ordered via P options, depending on the standard:

**P00** Undrilled cable entry plate  
**P01** Cable entry plate 3 × M63 × 1.5

For terminal box types **1XB7322-P05** and **1XB7422-P06**, another cable entry (power) can be ordered via the P option, depending on the standard:

**P00** Undrilled cable entry plate

For options **K09** or **K10**, instead of terminal box **gk833**, terminal box **gk843** is used mounted on the side.

<sup>1)</sup> Thread M16 × 1.5 arranged with 90° to signal connection. Thread only for option A12, A25 and 9th data position A (without encoder).

<sup>2)</sup> Thread M16 × 1.5 arranged opposite to the signal connection (lateral to the cable entry plate); thread only for option A12 and 9th data position A (without encoder).

<sup>3)</sup> Dependent on the design of the metric cable gland.

<sup>4)</sup> Current-carrying capacity based on EN 60204-1/IEC 60364-5-52 with installation type E.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1FE1 synchronous built-in motors

#### Overview

The SIMOTICS M-1FE1 built-in motors are water-cooled synchronous motors that are supplied as stator and rotor components. When the stator and rotor have been mounted to the spindle in the spindle box, a complete spindle unit is created.

#### Benefits

- Compact design (e.g. for turning machines and vertical milling machines) by dispensing with mechanical components, such as motor switch armature, belt drive, gearbox and spindle encoder
- High power density thanks to water cooling
- Maximum speed up to 40000 rpm, torque values up to 820 Nm for S1 duty
- Higher torque – up to 60 % – with the same active component volume, consequently more compact machine design compared to SIMOTICS M-1PH2
- Extremely short ramp-up and braking times (50 %) thanks to higher torque compared to SIMOTICS M-1PH2
- Cold rotor due to excitation using permanent magnets in the lower speed range and less power loss in the rotor and therefore less bearing heating and spindle expansion
- The stator and rotor are **ready to install**, no finishing is necessary.
- The absence of drive transverse forces permits extremely high accuracy on the workpiece thanks to smooth, accurate spindle motion even at very low speeds.
- Larger rotor inner bore than squirrel-cage rotor of asynchronous motors, but with the same outer diameter, which is an advantage with regard to the bar capacity of automatic turning machines and results in higher spindle stiffness due to larger shaft diameters for milling spindles
- Increased rigidity of the spindle drive, achieved by mounting the motor components between the main spindle bearings
- Less cooling capacity required for the same power compared to SIMOTICS M-1PH2, i.e. greater efficiency
- Only one encoder (hollow-shaft measuring system) for sensing motor speed and spindle position
- Simple servicing by replacing complete motor spindles

#### Benefits (continued)

- Compatible system of SINUMERIK, SINAMICS S120 and motor, therefore fast commissioning is ensured
- Higher machine productivity:  
The permanently excited motor spindles (PE spindles) increase the power density and economic efficiency of CNC machines. The optimized combination of SIMOTICS M-1FE1 built-in motor, drive control and CNC offers further opportunities for rationalization, such as lower workpiece machining times and fewer clamping faces.

#### Application

The water-cooled SIMOTICS M-1FE1 built-in motors are used in combination with the SINAMICS S120 drive system for applications that require highest standards of machining, accuracy and running smoothness, as well as shortest ramp-up times.

The SIMOTICS M-1FE1 built-in motors are offered in two main versions:

- High-Torque series  
6-pole/8-pole synchronous motors are available that have been developed for turning and grinding machines with moderate maximum speeds.  
These motors are characterized by an extremely high torque utilization. In this case, the speed range is approximately 1:2.
- High-Speed series  
In this series, 4-pole synchronous motors are available for milling. These motors are optimized for high maximum speeds and a speed range of over 1:4. These motors require a Voltage Protection Module VPM when operated up to maximum speed.

#### Design

The SIMOTICS M-1FE1 built-in motor comprises:

- A laminated, permanent-field rotor, which, as an option, can be designed with a sleeve for simple mounting and removal.
- A wound stator core with cooling jacket and encapsulated winding overhang
  - Free cable ends with length 0.5 m/1.5 m
  - Two integral PTC thermistors (incl. 1 spare), optionally with full or universal protection
  - A cooling jacket into which the stator has been inserted.

#### Rotor with sleeve

Torque is transmitted to the spindle mechanically without backlash by means of a cylindrical stepped press fit. The rotor is mounted on the spindle by thermal shrinking.

The rotor with sleeve is pre-balanced and can be removed and subsequently remounted. The bond can be released by pressure-oil injection without affecting the joint surfaces.

#### Rotor without sleeve

Torque is transmitted to the spindle mechanically without backlash by means of a cylindrical stepped press fit. The rotor is mounted on the spindle by thermal shrinking.

Removal of the rotor is not possible with this type of mounting. Rotors without sleeves are not pre-balanced.

<sup>1)</sup> Data for  $\Delta T = 105$  K, special windings on request.

<sup>2)</sup> Standard scope of supply: Encapsulated winding with  $2 \times KTY$  ( $1 \times$  spare).

<sup>3)</sup> Stator without cooling jacket, with impregnated winding on request.

<sup>4)</sup> Ordering spare parts: Stator: 1FE1...-.....-2.W.

<sup>5)</sup> Ordering spare parts: Rotor: 1FE1...-.....-3W..

<sup>6)</sup> Full protection option, application example: Load at motor standstill, external tripping unit required: Order No. 3RN1013-1GW10.

<sup>7)</sup> Universal protection option: Full protection + NTC PT3-51F + NTC K227

<sup>8)</sup> For moment of inertia with sleeve, see Configuration Manual.

<sup>9)</sup> For cable design, see Configuration Manual.

<sup>1)</sup> Data for  $\Delta T = 105 \text{ K}$ , special windings on request.

<sup>2)</sup> Standard scope of supply: Encapsulated winding with  $2 \times KTY (1 \times \text{spare})$ .

<sup>3)</sup> Stator without cooling jacket, with impregnated winding on request.

<sup>4)</sup> Ordering spare parts: Stator: 1FE1...-.....-2.W.

<sup>5)</sup> Ordering spare parts: Rotor: 1FE1...-.....-3W..

<sup>6)</sup> Full protection option, application example: Load at motor standstill, external tripping unit required: Order No. 3RN1013-1GW10.

<sup>7)</sup> Universal protection option: Full protection + NTC PT3-51F + NTC K227

<sup>8)</sup> Series reactor required, see Configuration Manual.

<sup>9)</sup> For cable design, see Configuration Manual.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH2 asynchronous built-in motors for direct drive – Water cooling

#### Overview

Active parts (rotor and stator) of SIMOTICS M-1PH2 asynchronous built-in motors

SIMOTICS M-1PH2 built-in motors for turning machines are liquid-cooled squirrel-cage AC asynchronous motors. These built-in motors have been specially developed for variable-speed operation of main spindles on turning machines.

#### Benefits

- Compact design obtained by dispensing with mechanical components such as coupling, belt drive, gearbox and spindle encoder
- High power density as a result of liquid cooling
- The absence of drive transverse forces permits extremely high accuracy on the workpiece thanks to smooth, accurate spindle motion even at very low speeds.
- Extremely short ramp-up and braking times
- Full rated torque is continuously available, even at standstill
- Simple servicing by replacing complete motor spindles
- Increased rigidity of the spindle drive, achieved by mounting the motor components between the main spindle bearings
- C-axis compatibility with hollow-shaft measuring system mounted on the spindle
- Low noise level due to absence of machine elements
- Torque is transmitted to the spindle mechanically without backlash by means of a cylindrical stepped press fit. The rotor is mounted on the spindle by thermal shrinking. The bond can be released by pressure-oil injection without affecting the joint surfaces.
- The rotor with sleeve is pre-balanced and can be removed and subsequently remounted
- The rotor with sleeve is finished-machined – that is, the rotor outer diameter need not be finished after mounting.

#### Design

#### Application

SIMOTICS M-1PH2 built-in motors are used for machines requiring an extremely high standard of machining quality, accuracy and running smoothness.

- Turning machines
- Grinding machines

#### Technical specifications

## Characteristic curves

Typical speed/power graph for AC motors<sup>1)</sup>

The graph shows the typical relationship between motor speed and drive power for SIMOTICS M-1PH2 motors for the following duty types in accordance with IEC 60034-1:

S1: Continuous duty

S6: Continuous duty with intermittent load and a relative duty factor of 60 % (S6-60 %) or 40 % (S6-40 %) with a maximum duty cycle time of 10 minutes.

## SIMOTICS M asynchronous and synchronous motors for SINAMICS S120

### SIMOTICS M-1PH8, 1FE1, 1PH2 motors Water cooling

#### Overview

#### Cooling principle

For design of the cooling units, see Configuration Manual.

#### Cooling unit manufacturers

These are non-Siemens products whose fundamental suitability is familiar to us. It goes without saying that equivalent products from other manufacturers may be used. Our recommendations are to be seen as helpful information, not as requirements or dictates. We do not warrant the composition, nature, state or quality of non-Siemens products.

Please contact the companies below for technical information.

# Main spindle motors

## Asynchronous and synchronous motors for SINAMICS S120

### 2SP1 motor spindles

#### Overview

The 2SP1 motor spindle product range comprises compact standard motor spindles for milling machines that can be used as an alternative to belt-driven spindles and can be used both for rough cutting and for precise fine machining.

The 2SP1 motor spindle contains all the classical elements of a motor spindle, such as a tool interface, tool clamping and release mechanism, spindle bearings suitable for absorbing the machining forces, water-cooled drive motor, spindle casing for fixing and sensors for indexing and monitoring tool changeover.

The motor spindles are available in 2 diameters of 200 mm (7.87 in) (2SP120) and 250 mm (9.84 in) (2SP125) and are offered with different torque and speed graduations to match the respective milling machine family. The motor spindles are ideally matched to the performance levels of SINAMICS S120.

The complete product range of 2SP1 motor spindles was developed in cooperation with and is manufactured at Weiss Spindeltechnologie GmbH.

#### Benefits

The 2SP1 motor spindles offer the user the following important advantages over conventional belt-driven solutions:

- Compact spindle solution and everything included in the spindle box
- Fewer components and easy installation
- Economical standard solution as compared with today's belt-driven solutions
- Drive train with high degree of rigidity
- High torque and speed and therefore high productivity thanks to high cutting efficiency and reduction of non-productive time
- Higher speed and shorter ramp-up times as compared with conventional belt-driven or gear solutions
- Economical pneumatic tool release mechanism or optional fast hydraulic tool release mechanism
- Worldwide system delivery including spindle mechanics from a single source – from Siemens
- Extremely short tool change times with 2SP210 thanks to 2-channel technology and clamping set with optional latching capability

#### Application

The main application area for 2SP1 motor spindles are main spindles for milling machines and machining centers in the job shop area of the machine tools sector.

The 2SP120 motor spindles are particularly suitable for the area of light metal machining at low torque and high speeds.

The 2SP125 motor spindles are characterized by a high torque. The main area of application is in the machining of steel and castings.

#### Design

The 2SP1 motor spindles are characterized by a rugged design.

Depending on the version, the following options are available for 2SP1 motor spindles:

- Various tool interfaces
- Internal tool cooling
- External tool cooling

#### Integration

The 2SP1 motor spindle can generally be used with:

- SINAMICS S120
- SINUMERIK 840Di sl
- SINUMERIK 840D sl

For 2SP1 motor spindles that use synchronous technology, a VPM Voltage Protection Module or the Internal Voltage Protection IVP must be used as integrated SINAMICS function, see Voltage Protection Module VPM.

# Main spindle motors

## Asynchronous and synchronous motors for SINAMICS S120

### 2SP1 motor spindles

#### Characteristic curves

2SP1 motor spindles in asynchronous design with star-delta changeover

2SP1 motor spindles in synchronous design

#### More information

Please refer to main spindle motors – Liquid cooling for a list of cooling unit manufacturers.

In addition to the standard motor spindles in the 2SP1 product range, it is also possible to use individually customized motor spindle designs.

For information about other motor spindles for turning, grinding, milling and drilling, please contact:

2SP120

2SP125

<sup>1)</sup> The spindle is approx. 43 mm (1.69 in) shorter without turning bushing.

<sup>2)</sup> HSK A63 tool interface.

<sup>3)</sup> SK40, CAT40, BT40 tool interfaces.

<sup>4)</sup> Spindle length L1 is approx. 118 mm (4.65 in) shorter, L3 approx. 147 mm (5.79 in) shorter and L4 approx. 30 mm (1.18 in) longer with a hydraulic tool clamping device.

<sup>1)</sup> MOTION-CONNECT 700

# MOTION-CONNECT connection systems

## Introduction

### General information

#### Overview

MOTION-CONNECT cables are suitable for use with many different types of machine tools and production machinery.

The following variants of MOTION-CONNECT cable are available as fully-assembled power and signal cables or sold by the meter:

- **MOTION-CONNECT 500**
  - Cost-effective solution for predominantly fixed installation
  - Suitable for low mechanical loading
  - Tested for travel distances of up to 5 m (16.41 ft)
- **MOTION-CONNECT 800PLUS**
  - Meets requirements for use in cable carriers
  - Suitable for high mechanical loading
  - Oil resistance
  - Tested for travel distances of up to 50 m (164 ft)

#### Benefits

Pre-assembled MOTION-CONNECT cables provide high quality and perfect, system-tested functionality.

#### SPEED-CONNECT

Fast, stable and reliable connections can be made with the new, pre-assembled cables with SPEED-CONNECT connectors. With a short rotation as far as the stop, the cap nut of the connector secures the connection.

The cables with SPEED-CONNECT connectors supplement the established range of MOTION-CONNECT cables with fully-threaded connectors.

#### Application

MOTION-CONNECT cables are intended for use in machines. They are not suitable for building technology applications or outdoor installation.

MOTION-CONNECT cables are tested in a cable carrier with horizontal travel distance and are also designed for cable carrier installation. They are not self-supporting.

The pre-assembled cables can be ordered in length units of 10 cm (3.94 in) and can be extended, if necessary.

When cable lengths (basic cables and extensions) are determined for the systems and applications described in this catalog, the technically permissible maximum cable lengths (e.g. 25 m (82 ft)) specified in the catalog must be observed. Malfunctions can occur if longer cables are used.

Siemens AG assumes no liability for correct transmission of signals or power in this case.

Compatibility between SPEED-CONNECT and full-thread connectors:

| Connector on motor with external thread | Connector with cap nut on cable | Compatibility |
|-----------------------------------------|---------------------------------|---------------|
| SPEED-CONNECT                           | SPEED-CONNECT                   | ✓             |
| SPEED-CONNECT                           | Full thread                     | ✓             |
| Full thread                             | Full thread                     | ✓             |
| Full thread                             | SPEED-CONNECT                   | —             |

#### Function

G\_NC01\_XX\_00289

The cables must be removed from the drum without twisting, i.e. the cables must be unwound and must never be lifted over the drum flange in loops.

G\_NC01\_XX\_00291

To maximize the service life of the cable carrier and cables, cables in the carrier made from different materials must be separated by spacers in the cable carrier. The spacers must be filled evenly to ensure that the position of the cables does not change during operation. The cables should be distributed as symmetrically as possible according to their weights and dimensions. Cables with very different outer diameters should also be separated by spacers.

When inserting pre-assembled cables into the cable carrier, do **not** pull at the connector, as this may damage the strain relief or cable clamping.

The cables must not be fixed in the cable carrier. They must be freely movable.

G\_NC01\_XX\_00290

The cables must be able to be moved without applying force in particular in the bending radii of the carrier. The specified minimum bending radii must be adhered to.

The cable fixings must be attached at both ends at an appropriate distance away from the end points of the moving parts in a dead zone.

## Function (continued)

MOTION-CONNECT cables are tested in a cable carrier. The cables are attached at one end by means of strain relief to the moving ends of the cable carrier. Strain relief is applied over a wide area of the cable jacket surface without crimping the cable.

Cables must be installed in accordance with the instructions supplied by the cable carrier manufacturer.

## Notes:

If, for example, pre-assembled cables are installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connector can also be supplied (power and signal cables<sup>1)</sup>). In this case, the contacts of the cables are crimped and the connector enclosure is supplied separately. After installing the cables, the customer assembles the connector enclosure.

In case of vibration load and with horizontal or vertical cable entries, we recommend that the cable is additionally fixed if between the cable strain relief on the cable carrier and the terminal at the motor part of the cable is hanging loose or is not routed. To prevent machine vibrations being transmitted to the connectors, the cable should be fixed at the moving part where the motor is mounted.

## Introduction

### General information

#### More information

##### Current carrying capacity for power and signal cables

The current carrying capacity of PVC/PUR-insulated copper cables is specified for installation types B1, B2, C and E under continuous operating conditions in the table with reference to an ambient air temperature of 40 °C (104 °F). For other ambient temperatures, the values must be corrected by the derating factors from the table.

| Cross-section<br>mm <sup>2</sup> | Current carrying capacity<br>rms AC 50/60 Hz or DC in amps for installation type  |                                                                                  |                                                                                                                                                                     |                                                                                                                                                                                        |

<sup>1)</sup> One control circuit pair.

<sup>2)</sup> One symmetrically loaded three-phase AC cable.

# MOTION-CONNECT connection systems

## Power cables for SINAMICS S120

### Overview

Power cable for connecting a SIMOTICS M-1PH8 motor with terminal box to a SINAMICS S120 Motor Module

The synchronous and asynchronous motors are connected to the Motor Modules or Power Modules by means of MOTION-CONNECT power cables.

The pre-assembled MOTION-CONNECT power cables are of high quality and offer safety with problem-free functioning.

Depending on the design, the MOTION-CONNECT power cables are either pre-assembled at one end or at both ends.

If pre-assembled power cables are to be installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connector can also be supplied. In this case, the contacts of the cables are crimped and the connector enclosure is supplied separately. After installing the cables, the customer assembles the connector enclosure.

The 6FX.002-5.... power cables are available with crimped contacts and with the connector enclosure supplied separately (not in the case of DRIVE-CLiQ power cables).

Power cables with separately supplied motor-end connector enclosure. In this case, the 6th position of the Order No. must be changed from **0** to **4**: 6FX.042-5....

Power cables with separately supplied module-end connector enclosure. In this case, the 6th position of the Order No. must be changed from **0** to **1**: 6FX.012-5....

Power cable with supplied connector for connecting a SIMOTICS S-1FT7/-1FK7/SIMOTICS M-1PH8 motor to a SINAMICS S120 Motor Module

#### Type of delivery for pre-assembled power cables

Pre-assembled power cables can be ordered in units of 10 cm (3.94 in) up to a maximum length of 299.8 m (984 ft).

The cables are supplied on reels up to 30 kg or 100 m (66.2 lb or 328 ft). Above 30 kg or 100 m (66.2 lb or 328 ft), cable drums are used instead of reels. This applies to both pre-assembled power cables and for cables sold by the meter.

#### Type of delivery for power cables sold by the meter

##### Fixed lengths

| Cross-section       | Brake cores  | MOTION-CONNECT 500<br>MOTION-CONNECT 800PLUS                   |
|---------------------|--------------|----------------------------------------------------------------|
| 1.5 mm <sup>2</sup> | with/without | 50 m (164 ft), 100 m (328 ft), 200 m (656 ft), 500 m (1641 ft) |
| 2.5 mm <sup>2</sup> | with/without | 50 m (164 ft), 100 m (328 ft), 200 m (656 ft), 500 m (1641 ft) |

##### Variable length, available in exact meter lengths

<sup>1)</sup> Note type of delivery.

<sup>2)</sup> Valid for installation in a cable carrier.

<sup>3)</sup> For SINAMICS S120 Motor Modules 3 A to 30 A in booksize format.

<sup>4)</sup> For SINAMICS S120 Motor Modules 45 A and 60 A in booksize format.

# MOTION-CONNECT connection systems

## Power cables for SINAMICS S120

Power cables for SIMOTICS S-1FT7/-1FK7/  
SIMOTICS M-1PH8 motors with SPEED-CONNECT connector

### Selection and ordering data (continued)

For SIMOTICS S-1FK7 motors without holding brake and with SPEED-CONNECT connector on  
SINAMICS S120 Power Modules

<sup>1)</sup> Note type of delivery.

<sup>2)</sup> Valid for installation in a cable carrier.

<sup>3)</sup> For SINAMICS S120 Motor Modules 3 A to 30 A in booksize format.

<sup>4)</sup> For SINAMICS S120 Motor Modules 45 A and 60 A in booksize format.

<sup>5)</sup> Length of core ends: 300 mm (11.81 in). 4 M8 cable lugs, 1 M6 cable lug and 1 spring-loaded terminal are also included in the scope of supply of the cables.

# MOTION-CONNECT connection systems

## Power cables for SINAMICS S120

Power cables for SIMOTICS S-1FT7/-1FK7/  
SIMOTICS M-1PH8 motors with full-thread connector

### Selection and ordering data (continued)

<sup>1)</sup> Note type of delivery.

<sup>2)</sup> Valid for installation in a cable carrier.

<sup>3)</sup> For SINAMICS S120 Motor Modules 3 A to 30 A in booksize format.

<sup>4)</sup> Length of core ends: 300 mm (11.81 in). 4 M8 cable lugs and 4 M6 cable lugs are also included in the scope of supply of the cables.

## Selection and ordering data (continued)

For SIMOTICS M-1PH808/-1PH810/-1PH813/-1PH816 motors with terminal box on SINAMICS S120 Power Modules

The combinations of power cable extensions shown are only provided by way of example.

<sup>1)</sup> Note type of delivery.

<sup>2)</sup> Valid for installation in a cable carrier.

<sup>3)</sup> The 6FX7002-5LM... cables comprise MOTION-CONNECT 800PLUS cables which are sold by the meter.

<sup>\*)</sup> For SIMOTICS L-1FN30/-1FN31 motors only.

<sup>\*\*)</sup> For SIMOTICS L-1FN33/-1FN34/-1FN36/-1FN39 motors only.

<sup>\*\*\*)</sup> For SIMOTICS L-1FN3 linear motors in the peak load version, the pre-assembled basic cable 6FX8002-5CS54-.... (4 × 6 mm<sup>2</sup>) to the SINAMICS S120 drive system must be used.

## Signal cables for SINAMICS S120

### Overview

MOTION-CONNECT DRIVE-CLiQ signal cable with IP20/IP67 connector  
Signal cables are pre-assembled and are sold by the meter for the connection of a variety of components.

The following different types of cable are available:

- DRIVE-CLiQ signal cables
- MOTION-CONNECT DRIVE-CLiQ signal cables
- MOTION-CONNECT pre-assembled signal cables

#### Type of delivery for pre-assembled signal cables

Pre-assembled signal cables are available in units of 10 cm (3.94 in).

The cables are supplied on reels up to 30 kg or 100 m (66.2 lb or 328 ft). Above 30 kg or 100 m (66.2 lb or 328 ft), cable drums are used instead of reels.

### Application

#### DRIVE-CLiQ signal cables

are used to connect components with DRIVE-CLiQ connections which have a separate or external 24 V DC power supply.

#### MOTION-CONNECT DRIVE-CLiQ signal cables

are used whenever components with DRIVE-CLiQ connections must meet high requirements such as mechanical stress and oil resistance, e.g. where a connection is made outside the cabinet between

- Motor Modules and Sensor Modules
- Motor Modules and motors with DRIVE-CLiQ interface
- Motor Modules and direct measuring systems with DRIVE-CLiQ interface (incl. third-party measuring systems)

MOTION-CONNECT DRIVE-CLiQ signal cables have 24 V DC cores.

#### MOTION-CONNECT pre-assembled signal cables

are used whenever motor encoders on motors without DRIVE-CLiQ interface are connected to Sensor Modules.

If pre-assembled signal cables are to be installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connector can also be supplied. In this case, the contacts of the cables are crimped and the connector enclosure is supplied separately. After installing the cables, the customer assembles the connector enclosure.

The 6FX.002-2C...-.... and 6FX.002-2E...-.... signal cables are available with crimped contacts and with the connector enclosure supplied separately (not in the case of DRIVE-CLiQ signal cables).

Signal cables with separately supplied **motor-end** connector enclosure. In this case, the 6th position of the Order No. must be changed from **0** to **4**:  
6FX.042-2C...-....

Signal cables with separately supplied **module-end** connector enclosure. In this case, the 6th position of the Order No. must be changed from **0** to **1**:  
6FX.012-2C...-....

#### Note:

Once the contacts have latched into the insulator, they can no longer be removed.

The combinations of signal cable extensions shown are only provided by way of example.

The maximum specified cable length (basic cable and extensions) must not be exceeded. The permissible total maximum length is reduced by 2 m (6.56 ft) for each interruption point.

<sup>1)</sup> Possible for SIMOTICS M-1PH808/-1PH810/-1PH813 motors.

<sup>2)</sup> Not for SIMOTICS S-1FK701.

<sup>3)</sup> Continuous load version.

The combinations of signal cable extensions shown are only provided by way of example.

The maximum specified cable length (basic cable and extensions) must not be exceeded. The permissible total maximum length is reduced by 2 m (6.56 ft) for each interruption point.

<sup>1)</sup> Not for SIMOTICS S-1FK701.

<sup>2)</sup> With evaluation of difference signals A\*, A, B\*, B, otherwise ≤ 100 m (328 ft).

<sup>3)</sup> Up to 10 m (32.8 ft) possible, depending on the encoder current consumption.

## Overview

Pre-assembled at motor and Module ends

0

Pre-assembled at motor end, connector at Module end supplied separately

1

Pre-assembled at Module end, connector at motor end supplied separately

4

#### Variant: Signal cables for integrated encoder

DRIVE-CLiQ cables between and

Power Module/Motor Module/  
SMC with IP20 connector Power Module/Motor Module/SMC with IP20 connector

D C 0 0

Power Module/Motor Module/  
SMC with IP20 connector Motor/encoder/SME IP67 connector

D C 1 0

DME20/cabinet bushing/coupler Motor/encoder/SME IP67 connector

D C 2 0

Basic cable between and motor with

SMC20 Incremental encoder (sin/cos 1 V<sub>pp</sub>) full-thread connector M23

C A 3 1

SMC30 Incremental encoder (HTL) full-thread connector M23

A H 0 0

CU310-2 Incremental encoder (HTL) full-thread connector M23

A H 1 1

SMC20 Absolute encoder full-thread connector M23

E Q 1 0

SMC10 Resolver full-thread connector M23

C F 0 2

SMC20 Incremental encoder (sin/cos 1 V<sub>pp</sub>)  
SPEED-CONNECT connector M23

C Q 3 1

SMC20 Incremental encoder SPEED-CONNECT connector M17

C N 2 0

SMC20 Absolute encoder SPEED-CONNECT connector M23

E Q 3 1

SMC20 Absolute encoder SPEED-CONNECT connector M17

E N 2 0

SMC10 Resolver SPEED-CONNECT connector M17

C N 2 0

Extension between basic cable with connector and motor connector

Full-thread or SPEED-CONNECT Full-thread or SPEED-CONNECT

4

#### Variant: Signal cables for external encoder

Basic cable between and

SMC30 Incremental encoder 6FX2001-2 (TTL/5 V supply)  
full-thread connector

C R 0 0

SMC30 Incremental encoder 6FX2001-2 (TTL/24 V supply)  
full-thread connector

C D 2 4

SMC20 Incremental encoder 6FX2001-3 (sin/cos 1 V<sub>pp</sub>) full-thread connector

C G 0 0

SMC30 Incremental encoder 6FX2001-4 (HTL) full-thread connector

C A 1 2

SMC30 Absolute encoder 6FX2001-5.S (SSI) full-thread connector

C C 1 1

SMC20 Absolute encoder 6FX2001-5.E (EnDat) full-thread connector

E Q 1 0

Extension between basic cable with connector and motor connector

Full thread Full thread

4

#### Variant: Signal cables for temperature sensor

Basic cable between SME1xx and SIMOTICS L-1FN3

6 F X 7 0 0 2

S L 0

Extension to basic cable between SME1xx and SIMOTICS L-1FN3

6 F X 7 0 0 2

S L 1 0

Basic cable between SME1xx and SIMOTICS L-1FN6/T-1FW6

6 F X 7 0 0 2

S L 1 0

#### Length code

Units of 10 cm (3.94 in) or 1 meter (3.28 ft) or in fixed lengths

## More information

## Definition of lengths for pre-assembled cables

Cable with exposed core ends and pre-assembled connector

Cable with pre-assembled connectors at both ends

Tolerances:

- Cable lengths up to 10 m (32.8 ft):  $\pm 2\%$
- Cable lengths of 10 m (32.8 ft) and longer:  $\pm 1\%$

<sup>1)</sup> Note type of delivery.

# MOTION-CONNECT connection systems

## Connection overviews

### Integration

The DRIVE-CLiQ signal cables of type 6SL3060-4A..0-0AA0 required for the standard configuration are part of the scope of supply of the Line Modules and Motor Modules. In this case, the modules must be mounted directly adjacent to one another in a row.

- 1) Adapter cable available from measuring system manufacturer.  
2) Possible for 1PH808/1PH810/1PH813/1PH816 motors.  
3) Possible for 1PH808/1PH810/1PH813/1PH816 motors for encoders with 512 S/R and 256 S/R.  
4) Possible for 1PH8 motors for encoders with 512 S/R and 256 S/R.

## Integration (continued)

Connection overview of SINAMICS S120 Motor Modules in booksize format with SME120/SME125 or TM120/SMC20 and SIMOTICS L-1FN3/-1FN6 linear motors

1) Adapter cable available from measuring system manufacturer.

2) For motors 1FN3100/1FN3150.

3) For motors 1FN3300 to 1FN3900.

4) Up to 10 m (32.8 ft) possible, depending on encoder current consumption.

5) The total cable length between SME120/SME125 and 1FN3 must not exceed 10 m (32.8 ft).

6) Extension cable, optional.

### Power connector

#### Overview

Power connector with screw-type connection

3 A to 30 A Motor Modules in booksize format are shipped without power connector, as this is already connected to the MOTION-CONNECT power cables.

Power connectors can also be ordered separately, e.g. for applications where installation of the motor cable would be difficult if a power connector were attached.

# MOTION-CONNECT connection systems

## Accessories for power and signal cables

### Mounting flange

#### Overview

Mounting flange for power connectors

Mounting flanges are used to route or fix connectors in IP67 degree of protection, for example, in control cabinets. With the exception of angled connectors, a mounting flange can be retro-mounted on connectors with a cap nut or with external thread.

### HF (high-frequency) clamp

#### Overview

HF (high-frequency) clamp for power connectors

To ensure correct grounding at the cable duct or cabinet wall, a ground clamp is optionally available together with the flanges for large-area discharging of high-frequency interferences. An HF (high-frequency) clamp is not required for size 3 power connectors.

### DRIVE-CLiQ cabinet bushing (RJ45)

#### Overview

DRIVE-CLiQ cabinet bushing for signal cables (RJ45)

The DRIVE-CLiQ cabinet bushing (RJ45) provides the high IP67 degree of protection for the appropriate MOTION-CONNECT DRIVE-CLiQ signal cables routed through openings in control cabinets. The DRIVE-CLiQ cabinet bushing has IP54 degree of protection on the outside and IP20 on the inside of the control cabinet.

# SINUMERIK Manufacturing Excellence

## Full-lifecycle services

### Overview

#### *SINUMERIK Manufacturing Excellence – the portfolio of services for your machines and processes*

Innovative services for machines offer enormous potential for optimizing the lifecycle costs. Siemens accompanies machines over their entire lifecycle – from the initial idea and design to operation and retrofit. The service package SINUMERIK Manufacturing Excellence plays an important role in optimizing the manufacturing process – regardless of the technologies used, the degree of automation, and the planning and manufacturing strategies.

### Benefits

#### *For the machine manufacturer:*

- Shorter machine development time
- Cost-optimized machine development
- Better machine servicing
- Machines with optimized dynamic response
- Creation of new service potentials
- Reduced warranty costs

#### *For the machine operator:*

- Reduced costs per item
- Process optimization
- Increased availability and productivity
- Quality optimization

### More information

More information is available on the Internet at:

[www.siemens.com/sinumerik/manufacturing-excellence](http://www.siemens.com/sinumerik/manufacturing-excellence)

or please contact your local Siemens sales office or Regional Company.

### Overview

### *Achieve the next generation of machines faster using Machine Development*

The Machine Development module has been developed in the context of SINUMERIK Manufacturing Excellence for the simulation, construction and commissioning of machines. Here, we meet the demands of machine manufacturers to minimize development risk. In addition, the first machine prototype is available much more quickly than in the traditional sequential development process.

In the simplest case, we can advise you on drive design and dimensioning. Our services can also go as far as the development of the control, operation or safety concept of a new machine, configuration of the control cabinet, or complete PLC/CNC/HMI programming.

#### Traditional approach, mechanical construction

#### Virtual prototyping

# SINUMERIK Manufacturing Excellence

## Full-lifecycle services

### Mechatronic Support

#### Overview

##### *Achieve the optimum machine quicker and more efficiently with Mechatronic Support*

The Mechatronic Support service ensures that already at the design stage of new machines, all the systems involved in mechanics, electronics, and IT are tested and optimized in a simulation environment in terms of their functionality and interaction, before they are actually built.

Mechatronic Support is thus the intelligent alternative to "trial and error". Innovative machine concepts are mutually compared, modified and optimized at the outset – a process which of course also takes account of your ideas for new mechatronic components.

##### *Virtual simulation, real construction*

With the help of the Mechatronic Support service, machinery ideas and new developments can be mechatronically tested and modified in a short time at low expense. The first real prototype can be built immediately afterwards as a functioning machine.

As the machine manufacturer, you have the benefit of shorter development phases and faster time-to-market; or as the end customer, you benefit from an optimized high-performance machine solution.

#### Benefits

- Shorter development times – shorter time to market
- Reliable achievement of development objectives
- Risk-free testing of innovative machine concepts
- Higher quality and productivity from the outset
- Get to the finished machine more quickly with specialist support

### Overview

#### *SIMIT for simulating a new machine during development*

SIMIT allows you to simulate the interaction between your machine tool or production machine and your automation system at all stages of product development, from commissioning through to sales and after-sales.

Long before you finish developing a machine and building a prototype, you can simulate its performance under realistic conditions using SIMIT. For this purpose, the automation system is simply coupled with a virtual behavioral model of the machine. This coupling has been optimized for high-performance machine tools and production machines with state-of-the-art control technology such as SIMATIC and SINUMERIK.

#### *Your automation system – fully integrated*

SIMIT is a simulation system that supports a wide range of hardware and software interfaces to the automation system. If you want to connect the entire control unit, e.g. including the CNC, PLC and the Human Machine Interface to a machine model in SIMIT, you can simply use a hardware interface for PROFIBUS.

SIMIT provides consistent support for the exchange of data with the engineering environment of your automation system.

The 2-channel interface IM-PBDP-2 is used to simulate PROFIBUS DP standard slaves and S7 slaves, as well as fail-safe SIMATIC slaves. A total of 125 DP slaves in a DP master system can be simulated in each channel. The interface is connected to the PC via Ethernet.

#### *SIMIT makes simulation as simple as it can be.*

Even though computer simulation is often regarded as a highly complex process, you do not need to be a simulation specialist to work effectively with SIMIT. All you need to do is operate the ergonomically designed, graphical user interface of SIMIT, while the application itself processes all mathematical and IT procedures associated with the simulation invisibly in the background.

### Overview (continued)

#### *SIMIT – modeling the machine*

The simulation model of the machine works according to a simple modular principle, i.e. it is created on the SIMIT graphical user interface by the joining together of individual components and controls. Simulation elements are simply dragged from the library and dropped into the machine model. The extensive basic library supplied with SIMIT provides you not only with standard arithmetic and logic functions, but also blocks for interfacing a broad range of I/Os of your automation system.

Using SIMIT's component type editor, you can create completely new types of component and use them in your simulations. You can freely define the connections and states of these component types as well as their functional and graphical response, allowing you to work extremely efficiently even when your machine models are complex.

### Benefits

- SIMIT combines savings in time and cost with enhanced product quality in machine tool and production machine building. SIMIT supports you during key phases of the development of machine tool and production machine products: during development, commissioning, testing and servicing.
- The automation solution used, including all the software modules developed by the machine manufacturer, can be tested with SINUMERIK SIMIT in advance and in a reproducible manner – and all without having the real "steel and iron" version of the machine at hand.
- A new machine can be tested without being subjected to any risk since proper functioning is checked in virtual reality. After the development work on the new machine has been completed, the virtual machine that has been generated can be used again for training, pre-sales and after-sales purposes.

### Integration

#### *Requirements*

- Operating system
  - Windows XP Professional, 32 bit
  - Windows 7 Professional, 32 bit

### Selection and ordering data

# SINUMERIK Manufacturing Excellence

## Full-lifecycle services

### Manufacturing IT

#### Overview

#### *Optimize production, servicing and maintenance with integrated IT solutions!*

Within the framework of SINUMERIK Manufacturing Excellence, Manufacturing IT offers you a holistic approach for optimizing your production-related processes involving machine tools with integrated IT solutions.

The building blocks are the IT products from SINUMERIK Integrate and extensive consultancy services for IT security and data security. We support you with our know-how during project implementation and operation of your solution.

Manufacturing IT supports your production and service processes with a wide range of consistently coordinated modular services that are based on SINUMERIK Integrate.

#### **Production**

##### **Job management and preparation with SINUMERIK Integrate Analyze MyPerformance**

The work in hand is flexibly controlled by a job management system based on Analyze MyPerformance (for example, with SIMATIC IT). Specifications and acknowledgements are exchanged between the ERP system (e.g. SAP) and production. Availability of the current information supports optimization of the manufacturing sequence and manufacturing resources. Further benefits are faster job throughput and reduced stock levels for materials.

##### **Machine data acquisition and evaluation with SINUMERIK Integrate Analyze MyPerformance**

Transparency is improved significantly by the use of machine data acquisition and evaluation (Analyze MyPerformance). This allows you to determine optimization potentials. Targeted analyses such as machine availability (OEE), cycle times, degree of utilization or alarm statistics prevent disturbances and result in longer machine runtimes.

##### **Parts tracking and archiving with SINUMERIK Integrate Analyze MyPerformance**

The functions for parts tracking and archiving based on Analyze MyPerformance and with SIMATIC IT support intelligent parts management as well as convenient parts tracking. This ensures that you are well-prepared for any warranty claims and product recalls. A reduction in costs accompanied by an increase in overall quality can also be expected.

##### **Tool management with SINUMERIK Integrate Manage MyTools**

Whether for individual machines, flexible transfer lines, or for the complete machine park – with our tool management (Manage MyTools), you have access to all tool data all the time. Through interfaces, the system ensures that the right data is at the right place at the right time. Tool statistics make your tool inventory transparent. You can detect potentials for rationalization with regard to tools much more easily and can achieve savings much more readily.

##### **CNC program management and transfer with SINUMERIK Integrate Manage MyPrograms**

CNC program management (Manage MyPrograms) offers you system-wide networking of your CNC machines and supports CNC program handling on transfer to and from the machine. It reduces costs in the CNC organization through secure and convenient CNC data archiving with versioning and administration functions.

##### Additional advantages:

- Optimized use of resources
- Shorter setup times and enhanced efficiency
- Reduced machine downtimes
- Automatic fault analyses
- Transparency in manufacturing down to the machine level

#### **Maintenance**

##### **Preventive maintenance with SINUMERIK Integrate Manage MyMaintenance**

The software module for maintenance management (Manage MyMaintenance) supports condition-oriented and/or preventive maintenance and optimizes servicing by early notification of the need for maintenance jobs such as cleaning, inspection and/or repair. This increases the machine runtime and reduces costs. The machine operators support the maintenance department by accepting responsibility for maintenance activities.

##### **Data backup and archiving with SINUMERIK Integrate Access MyBackup**

Data management supports backup, comparison and administration of control systems. This means: central data management with maximum fault tolerance and availability as well as efficient archiving of all machine data. When components are replaced, all the relevant data that is required for operation of these components is available again immediately. With Access MyBackup, we are providing an interface for accessing all the relevant backup data of a SINUMERIK 840D sl system. Manufacturers of data backup software can base their applications on this interface and are therefore authorized to implement SINUMERIK backup systems.

You will find Solution Partners at:

[www.siemens.com/automation/partnerfinder](http://www.siemens.com/automation/partnerfinder)

### Overview (continued)

#### Condition Monitoring with SINUMERIK Integrate Analyze MyCondition (local or ASP<sup>1)</sup>)

The investment decision depends increasingly on the analysis of costs over the complete lifecycle of a machine. Costs caused by machine downtime and unplanned maintenance dominate the calculation increasingly in accordance with the TCO principle (Total Cost of Ownership). The technical and organizational controlling of maintenance processes therefore becomes more and more important.

By means of standardized test procedures, Condition Monitoring supports machine operators, maintenance technicians and service engineers in determining the machine's condition and monitoring the wear on the machine over time. Through continuous evaluation of the status of the machine tools, trends can be detected early and measures can be taken or planned on time. Individual machine components can also be monitored cyclically.

The integrated maintenance model is used to optimize downtimes resulting from maintenance work through a complete overview of preventive and/or condition-oriented maintenance. The optimum time for maintenance can then be selected and productivity can be further improved.

#### Additional advantages:

- Transparency and efficiency through optimization of the maintenance measures for your machine
- Reduction in inventory costs through forward scheduling of spare parts based on condition monitoring and evaluation of machine components
- Increased productivity through the implementation of condition-oriented maintenance measures

### Service

#### Diagnostic Services with SINUMERIK Integrate Access MyMachine /Diagnosis (as ASP)

With Diagnostic Services, you can organize your service help desk and monitor the condition of your machines worldwide.

From tachograph data through to complex PLC logic, standard diagnostic cases can be preconfigured, stored as a template in the system and loaded onto your machines during commissioning.

On the control monitors you can trace the machine history in Diagnostic Services and thus find and analyze the causes of a fault quicker.

Your machines in the field are automatically synchronized with the servers on a regular basis. In the event of a fault, you can configure more specific diagnoses and transfer them to the machines. You are then able to further pinpoint faults dynamically.

If the results do not lead to a resolution of the problem, you can investigate the fault further by means of teleservice, rectify it online or consult other experts by means of a teleconference.

### Overview (continued)

Worldwide and without need for time-consuming installation of software, as easy as web mail, as secure as online banking. And if fault rectification on-site is unavoidable, you will have planned your maintenance job optimally based on the machine status determined online and can deploy your resources effectively.

#### Additional advantages:

- Enhanced customer retention thanks to optimized service processes
- Remote operation and monitoring of the control systems using standard browsers helps to cut travel expenses
- Troubleshooting is speeded up by intelligent fault diagnostics supported by data and notification services

#### Internet service platform with SINUMERIK Integrate (ASP)

As an alternative to a local installation, Siemens offers the functions and services described above, including the entire IT infrastructure, in the form of an ASP model:

In other words, an Internet-based infrastructure with high-performance servers, storage media and links to e-mail/text message systems.

The service platform supports you with:

- Availability of data and software functionality between different companies
- Assuring security for data access
- No need to change the security guidelines of participating companies

This type of environment is essential for quick and easy access to the knowledge of experts beyond corporate boundaries. A uniform view of the data of the machines and use of the same software enables faults to be rectified more quickly, resources to be implemented optimally, and costs to be reduced.

The infrastructure and services are compatible with today's IT security regulations. Periodic security audits ensure that our systems are always up-to-date in terms of security technology.

#### Additional advantages:

- Low IT costs, and therefore cost-effective from the first machine onwards
- Accounting and investment security due to fixed prices
- High level of data security due to extremely fault-tolerant servers and multi-level access protection

### More information

Additional information on the software modules described above can be found in chapter SINUMERIK Integrate.

#### Security note

In the case of software for remote maintenance or connection to higher-level networks, suitable protection measures must be taken (including industrial security, e.g. network segmentation) to guarantee safe operation of the system. You can find more information on Industrial Security on the Internet at:

## Full-lifecycle services

### Condition Monitoring

#### Overview

#### *Innovation potential for servicing and maintenance*

Innovative, successful manufacturing enterprises focus their efforts on increasing the productivity and availability of machines and optimizing service and maintenance processes. Condition Monitoring makes an important contribution to the attainment of these goals.

#### *Condition Monitoring*

The investment decision depends increasingly on the analysis of costs over the complete lifecycle of a machine. Costs caused by machine downtime and unplanned maintenance dominate the calculation increasingly in accordance with the TCO principle (Total Cost of Ownership). The technical and organizational controlling of maintenance processes therefore becomes more and more important.

By means of standardized test procedures, Condition Monitoring supports machine operators, maintenance technicians and service engineers in determining the machine's condition and monitoring the wear on the machine over time. Through continuous evaluation of the status of the machine tools, trends can be detected early and measures can be taken or planned on time. Individual machine components can also be monitored cyclically.

The integrated maintenance model is used to optimize downtimes resulting from maintenance work through a complete overview of preventative and/or status-oriented maintenance. The optimum time for maintenance can then be selected and productivity can be further improved.

By utilizing the full scope of Condition Monitoring functions, it is possible to optimize the costs incurred for production machine maintenance as well as the Total Cost of Ownership (TCO), and so benefit in the following ways:

- Increased plant availability
- Increased productivity
- Reduced overheads for inspection and maintenance
- Lower investment costs
- Freedom to concentrate on the core business

#### *Monitoring of relevant components*

In order to prevent undesirable machine downtimes and reduce unscheduled maintenance costs, the causes of prolonged outages and the drivers of lifecycle costs must also be included in the condition monitoring system.

#### Overview (continued)

On machine tools, this applies in equal measure to the linear axes and main spindles, the tool magazine, the chip conveyor and the automation system with pneumatic components and fluid technology.

Further advantages are gained by monitoring relevant components:

- Reduced risk of failure and consequential costs
- Lower spare parts costs through full utilization of wear margin
- Smaller spare part inventories particularly of expensive components
- Early notification when essential maintenance is required
- More effective planning of your resources

#### *Condition monitoring methods*

Condition Monitoring offers a variety of methods by which you can determine the exact condition of your machine tool.

Automated test procedures monitor the synchronism, friction, dynamic response and accuracy of linear axes. The variable monitor tracks freely selected PLC or NC variables accordingly without needing to make any changes to programs. All of this can be done with tools that are already integrated in the control system of your machine. The results of the measurements are stored and analyzed. They are displayed as individual measurements but also visualized in measurement series with trend display.

Furthermore, it is possible to integrate additional sensors into the overall process in order to incorporate more detailed information into the analysis of the machine's condition.

The test procedures can be planned to suit requirements by means of the integrated maintenance planning function and performed if necessary with PLC support.

#### *Workflow processes*

Condition Monitoring automatically tracks the trend in significant performance characteristics and monitors them for violation of limit values. If a measurement delivers an inadmissible result, the application automatically informs the relevant partners by text message or e-mail. Where appropriate, it might even trigger a maintenance request directly for your machines.

You can of course integrate Condition Monitoring via interfaces into your maintenance system so that the maintenance request can also be issued there.

With Condition Monitoring you are laying the foundation for the creation of a condition-oriented maintenance system, thereby fulfilling one of the requirements for optimized production.

#### *The platform*

Siemens is offering Condition Monitoring as a standard client-server application for operation in the customer's own network, or via an Internet-based infrastructure with high-performance servers, storage media and links to e-mail/text message systems.

The infrastructure and services are compatible with today's IT security regulations. Periodic security audits ensure that our systems are always up-to-date in terms of security technology.

#### More information

You can find more information on Industrial Security on the Internet at:

[www.siemens.com/industrialsecurity](http://www.siemens.com/industrialsecurity)

### Overview

#### Calculable costs for maintenance and service

This is what we are offering to machine tool manufacturers, machine distributors and machine tool users with the Extended Machine Contracts option.

In these individually agreed contracts, maintenance concepts are assembled from the following modules: preventative measures, repair, access to Siemens service personnel, service intervals, and spare parts logistics/management.

Here, Siemens accepts the risk of costs through fixed-price invoicing of the services provided (contract cost). With the sole objective of providing tailor-made, efficient support with maintenance.

You remove the risk of unexpected costs and can rely on a high degree of machine availability. The joint agreement ensures access to qualified Siemens service personnel for fault elimination on site as well as professional spare parts logistics, which ensures proximity to the customer.

#### Additional advantages:

- Security of planning, reduced costs and transparency of costs
- Higher productivity thanks to minimal downtimes
- Service packages tailored to requirements
- Supplementing and relieving the service personnel at the manufacturer or end user
- Access to the worldwide service structure of Siemens AG

#### Repair Service Contract RSC: Subsequent repairs at fixed prices

We have developed the Repair Service Contract RSC especially for machine manufacturers and machine distributors. It offers subsequent rectification of defects at the site of the machine at fixed prices. With these contract-based services, you can cover the personnel costs and materials costs that are incurred for rectifying any faults on our products after the second commissioning phase at the end customer. The service period can be freely selected.

The personnel services comprise the provision of service personnel, error diagnostics and fault rectification on site as well as verification of fault rectification. The runtime of the contract can extend the period of liability for defects to up to 5 years.

In the case of services that exceed the RSC scope, you can use the regional service or add-on services. This includes extended service periods, agreed response times and preventative measures.

#### The benefits of the Repair Service Contract RSC:

- Risks that result from liability for defects are limited by fixed prices
- Fault rectification at the installation site of the machine, without the need for verification of the defect by the machine tool manufacturer or distributor
- Reduced downtimes at the customer site due to stored product data and final destination information

#### Local service contract LSC: the modular service package

With the local service contract LSC, we offer machine users an individual, modular service package that reliably ensures the availability of machine tools and manufacturing systems and therefore makes an important contribution to efficient production.

### Overview (continued)

The scope of the service contract is individually matched to the service concept. We can also offer you our contract-based services outside normal office hours – up to 24 hours a day, 365 days a year. Alternatively, we can offer you our services with faster response times: from the normal "next day" to a 4-hour response time.

#### The benefits of the local service contract LSC:

- Assured availability through reduction of the machine downtimes
- Plannable costs thanks to agreed service contract prices
- Services tailored to requirements

#### Life Cycle Check

Our Life Cycle Check service assists you in optimizing your spare parts strategy so as to safeguard your productivity.

An overview of our services:

- Acquisition of all modules in your installation which have control or drive relevance
- The acquired Siemens modules are analyzed with respect to their availability as a spare/replacement or repair part. Information about estimated phase-out and discontinuation dates and possible follow-on types is collected and recorded in a report.
- Support for an optimum spare parts strategy:
  - Demand-based ordering of the Siemens spare parts service
  - Optimization of customer's spare parts inventory (stock reduction)
  - Buyback of spare parts by Siemens on request
  - Punctual availability of upgrades
  - Definition of follow-on solutions/general overhaul
  - Retrofit scheduling

For example, we compare the components in your spare parts stores with the components installed on your machines and inform you by way of a report of any components held in your stores which have become obsolete for your machines. Or we will show you which of the stored components are compatible as spare parts so that you can reduce your inventory accordingly.

As part of the local service contract, we will send you an annual report which specifies the spare part availability of your components which you can use as a guide for adjusting your spare parts inventory.

#### Benefits of the Life Cycle Check:

- Increased productivity because plant outages are rare: An optimized spare parts supply keeps downtimes to a minimum
- Reduction in asset and warehousing costs: Use of the Siemens spare parts service
- You only store selected spare parts on site: Reduce stocks of superfluous parts
- Extension of the plant lifecycle: Installation of suitable follow-on types

### More information

Please contact your local Siemens sales office or Regional Company for more information.

## Full-lifecycle services

### Repair service contract RSC

#### Overview

##### *RSC description of performance*

In the context of the repair service contract (RSC), Siemens eliminates faults on components from Siemens Industry Sector, I IA&DT specified in the contract (with the exception of complete motor spindles) at the machine location on behalf of the machine tool/production machinery manufacturer and dealer.

##### *RSC services*

- Provision of service personnel
- On-site diagnostics
- On-site fault rectification
- Proof of fault rectification

**Diagnostics** refers to the components specified in the parts list of the final destination certificate. Diagnostics is carried out on the basis of a technical fault message clarified in advance by the manufacturer or dealer with specification of the contract number.

**Fault correction** is carried out by repairing and/or replacing faulty components. In the event of a machine standstill, fault correction is carried out with the response time specified for the country group.

Siemens provides qualified personnel to perform diagnostics and fault rectification on our products. If mechanical work is also necessary, this must be provided or arranged by the manufacturer/dealer. Example: Dismantling/mounting of motors or other components.

The services are provided during the usual working hours in the country of installation. Waiting times of longer than one hour that are not caused by Siemens will be invoiced separately. The RSC contract holder is responsible for initiating the service request unless otherwise stipulated in the contract (e.g. by a Direct service response).

**Spare parts** are provided from our central or regional spare parts stores using our worldwide spare parts logistics infrastructure. All essential spare parts are stocked in our central spare parts stores. Regional spare parts stores are adapted to include the components specified in the final destination certificate<sup>1)</sup>.

The following components are not defined as spare parts:

- Motors<sup>2)</sup>
- Cables<sup>3)</sup>
- Special or customer-specific modules and components not available from Siemens as spare parts.

Defective components are replaced free of charge within the agreed<sup>4)</sup> contract period. See under Service exclusions.

##### *Contract prerequisites*

- Final destination certificate
- Data backup at the user
- Parts lists for the individual components
- Access to the machine/components

The manufacturer/dealer provides the final destination information in good time prior to commencement of the contract, and ensures that all machine data is backed up and available at the user. Particular data for the final destination certificate are: Machine No., machine type, machining technology, control system, drive system, number of measuring circuits, data for OEM application, date of commissioning at end user's site, country of end user, if possible full address of end user and parts list of components used with order/serial number.

The manufacturer/dealer is responsible for providing the possibility for rapid implementation of the services and unobstructed access to the components including any software safety features, such as Lock-it! for carrying out the diagnostics/fault correction whenever necessary, as well as for naming a person in charge of software-protected machines that can be reached at any time.

To simplify data handling, the specified data from systems with SINUMERIK Operate can be stored on the CNC system with the function identSNAPSHOT and transferred to Siemens by online registration.

[www.siemens.com/sinumerik/register](http://www.siemens.com/sinumerik/register)

On existing SINUMERIK CNC systems, data handling can also be simplified and an online registration performed by means of the PC tool identSNAPSHOT – these data can also be remain with the machine as a data backup. For further information about the PC tool and handling the parts list of components used, please contact your Siemens sales office.

##### *RSC certificate*

As the RSC contract partner, the manufacturer or dealer is provided with a certificate with contract number (the contract number must be specified when requesting service) once the final destination certificate has been handed over (prerequisite for provision of services at the end customer site). This certificate contains the contract number and essential contract data such as machine number, machine type, contract start date, contract end date, and address for the provision of services.

##### *Period of validity*

The RSC commences on the date registered with Siemens for completion of the second commissioning procedure at the end customer's site, and ends on expiry of the selected RSC period<sup>5)</sup>.

##### *Contract periods*

The RSC is offered for the warranty period that our customers (manufacturers/dealers) provide to their end customers. Various RSC periods permit you to satisfy different market requirements. In the case of RSC periods exceeding the limitation period originally granted for Siemens I IA&DT components, the limitation period is extended with respect to claims for subsequent fulfillment of performance, with the exclusion of further rights and claims, corresponding to the extended RSC period. An existing RSC can be extended once by 6 or 12 months. The extension must be ordered during the period of the basic RSC.

<sup>1)</sup> Since the export of standard versions (components/systems) is subject to time-intensive approval procedures by authorities, and since this also applies to the delivery of components subject to approval in the context of services and spare part deliveries, it is recommended that **export versions should be used whenever possible**. This applies in particular in cases where the control can be exported without official approval after the machine manufacturer has installed it in a machine tool. Please note in this regard the **Export control information**.

<sup>2)</sup> For selected motors, we centrally stock components for fast delivery in Germany and the USA. These motors can be manufactured and delivered within a few working days. You can obtain the current list from your Siemens sales partner.

<sup>3)</sup> The delivery times known to you usually apply.

<sup>4)</sup> Examples for service exclusions:

- Non-compliance with the Siemens project engineering and user guidelines, e.g. incorrect installation, incorrect grounding, or incorrect operating characteristics
- Function-critical fouling, e.g. oil, conductive substances, rust
- Mechanical damage
- External electrical influence, e.g. effects of overvoltage, compensation system without reactor, or line harmonics
- Machine commissioning or optimization
- Intentional destruction

<sup>5)</sup> For example, in the case of an RSC with 12 months contract period, maximum of 24 months from the transfer of risk (delivery of the components).

### Overview (continued)

#### Contract versions

Two versions of the RSC are available.

- The master contract is for machine manufacturers who agree to order one RSC for all machines with Siemens equipment.
- The individual contract is for machine manufacturers who order an RSC only for certain machines equipped by Siemens.

#### Service exclusions

The contract shall not be deemed to have been performed in all cases of subclause VIII./7 Defects as to Quality of the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>. In the case of parts subject to wear (e.g., motor bearings and fans or cables), replacements will be provided free-of-charge within 12 months of commencement of the RSC in the case of proper use, irrespective of the actual duration of the RSC.

#### Export license

Fulfillment of the service call may be subject to authorization due to the application or the type of replacement parts, equipment and documentation required. The service call is, therefore, subject to the granting of the necessary export licenses and the absence of any other obstacles relating to German or other applicable export regulations.

#### Response time

As a rule, the following response times apply when the RSC is implemented in the case of a machine standstill:

| Country group           |                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------|
| 1                       | Next working day                                                                                                           |
| 2                       | Within two working days                                                                                                    |
| 3                       | Depending on country-specific conditions                                                                                   |
| Countries not mentioned | Depending on country-specific conditions, only for customers with master contract for the price of the individual contract |

We define the response time as the time from when your clarified order is placed until our service engineer begins the journey to the site stated in the order, or until troubleshooting commences using teleservice. The specified response times apply to "technically clarified fault notifications" within the usual working hours of the region (e.g., Monday to Friday 8:00 to 17:00) excluding public holidays.

#### Country list

The repair service is offered for the following countries:

| Continent                                                        | Country/region                                                                                                                                                                                                                           |
|------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country group 1</b>                                           |                                                                                                                                                                                                                                          |
| Americas                                                         | Brazil, Mexico, USA                                                                                                                                                                                                                      |
| Asia                                                             | China, India, Japan, South Korea, Taiwan, Thailand                                                                                                                                                                                       |
| Australia                                                        | Australia                                                                                                                                                                                                                                |
| Europe                                                           | Andorra, Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, Italy, Liechtenstein, Luxembourg, Monaco, the Netherlands, Poland, Portugal, Romania, Slovakia, Spain, Sweden, Switzerland, Turkey |
| <b>Country group 2</b>                                           |                                                                                                                                                                                                                                          |
| Africa                                                           | South Africa                                                                                                                                                                                                                             |
| Americas                                                         | Argentina, Canada                                                                                                                                                                                                                        |
| Asia                                                             | Indonesia, Malaysia, Singapore                                                                                                                                                                                                           |
| Australia                                                        | New Zealand                                                                                                                                                                                                                              |

#### OEM service levels

To guarantee repair service for OEM applications, an assessment is necessary based on the OEM service guideline. The assessment grades the OEM application from 0 to 4. A surcharge will be levied for OEM service levels 1 to 4.

<sup>1)</sup> Examples for service exclusions:

- Non-compliance with the Siemens project engineering and user guidelines, e.g. incorrect installation, incorrect grounding, or incorrect operating characteristics
- Function-critical fouling, e.g. oil, conductive substances, rust
- Mechanical damage
- External electrical influence, e.g. effects of overvoltage, compensation system without reactor, or line harmonics
- Machine commissioning or optimization
- Intentional destruction

<sup>1)</sup> Max. 24 months from the transfer of risk (delivery of components).

<sup>2)</sup> Max. 36 months from the transfer of risk (delivery of components).

<sup>3)</sup> Physical axes and spindles count as measuring circuits.

<sup>4)</sup> Example for 17 measuring circuits: (basic RSC for ≥ 9 measuring circuits) plus 8 x (measuring circuit supplement for RSC > 9 measuring circuits).

### Overview

#### **Productivity Improvement: increasing the productivity of your machine tools**

Productivity Improvement aims to improve the productivity of older machine tools whose warranty period has expired. Their productivity can be increased by up to 15 percent – at a previously agreed, profit-related price and with a contractually assured machine standstill period.

#### **When is Productivity Improvement viable?**

In general, Productivity Improvement pays for itself in the case of machines that are used intensively, with high capacity utilization, high numbers of machine service hours, or long running times per part. Overall, the lifecycle costs are reduced and the manufactured quantities are increased.

### Overview (continued)

#### **Where is Productivity Improvement applied?**

In CNC, the service is used as follows: The higher computing performance achieved by modernization of the control system hardware shortens all system-related dead times and also supports the use of new software. This, in turn, incorporates the important technological advances of recent years. On your machines, therefore, high-quality, efficient control algorithms and new productivity-enhancing CNC functions can be used. The required productivity improvement is often achieved with just these two measures.

When hardware and software updating are insufficient, CAD/CAM integration as well as the post processor can also be optimized.

All these measures shorten the main process times and ancillary times without subjecting the overall mechanical system to higher levels of wear or the electrical system to critical thermal overloading.

#### **How is Productivity Improvement actually performed?**

The organizational process for Productivity Improvement follows a defined, quality-assured process:

The general procedure is to disturb normal operation as little as possible. All optimization measures are prepared by Siemens first in the laboratory and verified in a simulation – production at the customer site continues to run normally during this phase. Implementation at the machine is then performed in the shortest possible time.

Success is guaranteed by Siemens with Performance Contracting in accordance with the Bonus Malus model. This means: We accept responsibility for the project results and you only pay us for what we actually achieve.

### Benefits

- Selective control system update (software and hardware)
- Reduced part production time while maintaining the same quality level
- Only a short machine standstill, thanks to systematic and time-optimized project processing
- Suitable for improving the productivity of older machine tools

### Machine Retrofit

#### Overview

##### *Machine Retrofit: For a longer machine service life*

Machine modernization – also known as retrofit – gives the machinery a second lease of life and extends the utilization period. When a machine has been in operation for ten or more years, control technology and drive systems have undergone fundamental further development. Whether in terms of energy costs or new functions that make operation of the machine tool more efficient. Furthermore, new components have better spare parts availability and this can be decisive for safe operation of the machine tool in many cases.

The mechanical system for older machines is generally still in good to excellent condition, so it is more economical to modernize the control technology and drive system than to make a new purchase.

With Machine Retrofit, Siemens offers machine modernization in which the individual components are modernized and the machine is brought up to date technically, i.e.:

- New control technology and drive systems with SINUMERIK and/or SINAMICS
- Shopfloor-based programming with ShopMill and ShopTurn
- Mechanical overhauls where necessary

New technologies and possibilities ensure much more flexible manufacturing. Through complete mechanical and electrical overhauls, the machine and plant investment is secured over the long-term.

Even existing older NC part programs can be reused after a retrofit, because even the service of program conversion is included in our controls offer as an optional item. Further benefits of our retrofit services are the ability to network the machines in the existing IT infrastructure and the provision of Condition Monitoring services.

#### Benefits

- Increased machine availability and therefore increased productivity
- Secure, long-term, worldwide supply of spare parts and service expertise
- Low-cost alternative to a completely new purchase
- Enhanced operating and programming comfort
- Faster processing cycles when processing complex components
- Greater precision
- The use of Safety Integrated improves safety for personnel and machines
- Reliable data management and higher memory capacity
- Networking possibilities and integration of machines in the IT environment

Machine Retrofit: before – after

### Spare parts services

### Spare parts services Delivery of spare parts

#### Overview

Spare parts services during the lifecycle

Siemens also provides constant support to customers after delivery of the machines or plants. This includes spare parts, repairs, as well as other supplementary services, and has a positive effect on machine operating times, inventories and costs.

When customers purchase a high-quality machine or plant, they intend to use it as intensively as possible, preferably for three shifts a day over many years. Under such circumstances, it is normal for parts to fail eventually. It is essential to replace the part as quickly as possible, because every hour of a plant stoppage costs money. To satisfy the multi-faceted requirements in the different areas, we have created comprehensive spare parts services.

You can sign up for the spare parts service that suits your requirements perfectly:

- Delivery of spare parts
- Delivery as exchange product
- Repair
- Product upgrade service
- General overhaul
- Function check
- Return of diagnostic parts
- Extended spare part availability and
- Stock reduction of your spare parts store

#### Benefits

- Optimum price/performance ratio and top quality
- Lifecycle management over the complete lifecycle
- Outstanding quality and availability of your machines and plants using Siemens original spare parts
- Global network and optimized logistics chains – 24 hours a day, 365 days a year
- Additional services from Siemens

#### Overview

In every industry worldwide, plants and systems are required to operate with constantly increasing reliability. Lack of a specific spare part can result in considerable costs. We will provide you with the support you need to prevent a standstill from occurring in the first place: with a worldwide network and optimum logistics chains.

| Ordering mode            | Logistics service                               | Comment                                                                                                                                                                                                            |
|--------------------------|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Standard</b>          | Cost-optimized:<br>Contracted shipping company  | Delivery within the normal national delivery times through the contracted shipping company                                                                                                                         |
| <b>Plant stoppage</b>    | Time-optimized:<br>Express, courier, collection | You choose the shortest possible delivery time for your own benefit: <ul style="list-style-type: none"> <li>• Delivery by means of collection or courier service</li> <li>• Delivery by express service</li> </ul> |
| <b>Emergency service</b> | Special logistics:<br>Courier                   | You can also order the spare parts from us outside normal working hours, as well as on weekends or national holidays round-the-clock. Your delivery will arrive by courier                                         |

#### Benefits

- New liability for defects for the spare part
- Long-term spare parts availability
- Optimum system compatibility

# SINUMERIK Manufacturing Excellence

## Full-lifecycle services

### Spare parts services Delivery as exchange product

#### Overview

In addition to the simple delivery of spare parts, with many products, we also offer you the option of an exchange. This has the advantage that you not only receive the spare part quickly, but are able to return the defective device to us for a credit. You therefore receive our spare part at the lower exchange price.

A credit will be awarded on condition that the repair code indicates that repurchasing is admissible, a replacement is obtained from the spare parts store, and that the returned product is repairable.

The ordering mode and logistics service determine the delivery of spare parts:

| Ordering mode            | Logistics service                               | Comment                                                                                                                                                                                                            |
|--------------------------|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Standard</b>          | Cost-optimized:<br>Contracted shipping company  | Delivery within the normal national delivery times through the contracted shipping company                                                                                                                         |
| <b>Plant stoppage</b>    | Time-optimized:<br>Express, courier, collection | You choose the shortest possible delivery time for your own benefit: <ul style="list-style-type: none"> <li>• Delivery by means of collection or courier service</li> <li>• Delivery by express service</li> </ul> |
| <b>Emergency service</b> | Special logistics:<br>Courier                   | You can also order the spare parts from us outside normal working hours, as well as on weekends or national holidays round-the-clock. Your delivery will arrive by courier                                         |

#### Product returns

For product returns, we require the following information:

- Reason for return
- If defective: detailed description of the fault
- Machine number
- Machine/system manufacturer
- End customer

We will then be able to provide you with additional information in the repair report/inspection report regarding the diagnosis/inspection as well as information about the completed repair.

#### Benefits

- Price benefit through the option of returning defective parts
- A spare part is available immediately in the event of failure
- New liability for defects for the spare part
- Long-term spare parts availability
- Optimum system compatibility

### Spare parts services Repair

#### Overview

Downtimes cause problems in the plant as well as unnecessary costs. We can help you to reduce both to a minimum – with our worldwide repair facilities. The advantage for you: Defects can be rectified before they cause further harm.

Repair is a favorable option when you have specific reasons for not replacing the defective device or part with a new one (delivery as exchange product).

We maintain a global network of Siemens repair shops and certified partners to ensure that we will always be able to process your repairs quickly.

We can offer you different types of repair depending on your requirements:

#### Normal repair

Normal repair at standard conditions normally takes 10 working days following receipt of the defective item at our repair shop.

#### Fast repair

In particularly urgent cases, we offer you the option of a fast repair within 1 or 2 working days for many products at additional cost.

#### Turnaround repair

With a turnaround repair, we organize on your behalf collection of the device/component to be repaired.

#### Mobile repair service

We come to you and perform the required repairs on site, for example, when the device/component cannot be removed due to its weight.

#### Function repair

A function repair is the same as a normal repair but excludes the repair of cosmetic defects, e.g. scratches, labels, discoloration. The conditions applicable to function repairs should be observed in this case.

For repairs, we require the following information:

- Reason for return
- If defective: detailed fault report
- Machine number
- Machine/system manufacturer
- End customer

#### Benefits

- Short downtimes for machines and plants
- Only certified original parts are used
- Additional services from Siemens:
  - Longer availability of your machine/plant through the preventive replacement of wear parts and aging parts
  - Highest standards of quality
  - Use of the comprehensive test concept of series production, including software, firmware, ASICs, complex function blocks, etc.
  - Implementation of all the hardware and software/firmware enhancements known by development, production, service and quality management departments, as well as suppliers
- Information supplied by repair report/inspection report

### Spare parts services Product upgrade service

### Spare parts services General overhaul

#### Overview

Product upgrade service: From OLD to NEW

A long service life is expected from machines and plants. The service life of the electronic components is, however, limited and normally shorter than the planned machine/plant operating times. To ensure that the required extended availability of the machine/plant is achieved, we offer you the product upgrade service at an attractive price.

In the course of their lifecycle, electronic components are normally redesigned/upgraded several times. With the product upgrade service, you will always receive the latest technology.

A planned product upgrade from OLD to NEW helps to prevent unplanned machine stoppages and supports a safer and longer machine/plant availability. The upgrade service is mainly offered for older components that will soon be discontinued.

For information about potential upgrades from the latest upgrade list, please ask your regional Siemens contact.

#### Benefits

- Price benefit through upgrade service
- New liability for defects for the new component
- Extended availability of your machines/plants
- Prevention of component failures due to wear and aging
- Prevention of machine stoppages due to unavailability of spare parts
- Reduced spare parts inventories
- Latest technology
- Easier servicing due to fewer variants
- Future service and support through Siemens is assured

#### Overview

Extension of the period with a constant failure rate

A long service life is expected from machines and plants. The service life of electronic components and mechanical parts is, however, limited and normally shorter than the planned machine/plant operating times. For higher availability of the machines or plants, we offer a general overhaul (preventive maintenance) for electronic components and motors at favorable conditions.

During the planned general overhaul, wear parts and aging parts are replaced in accordance with their stated service life so as to reduce unplanned downtimes. In the case of motors, in addition to a general overhaul, replacement of bearings and encoders is also offered.

If a fault is detected during a general overhaul, troubleshooting and repair will be performed at the repair price without requesting confirmation or interrupting the process. In the case of extensive wear or damage, a general overhaul/repair will not be performed. A fixed lump sum for expenses will be charged in this case.

#### Benefits

- Preventive replacement of wear parts and aging parts in accordance with their stated service life
- Reduction in unplanned plant stoppages
- Enhanced production reliability
- Extended availability of your machines/plants
- New liability for defects for 12 months for the components subjected to a general overhaul
- Low price

# SINUMERIK Manufacturing Excellence

## Full-lifecycle services

### Spare parts services Function check

#### Overview

It is checked that the components function reliably.

The first step involves cleaning the component. Then all the hardware and software/firmware enhancements are implemented that are known by development, production, suppliers, service and quality management departments. Using the comprehensive test concept of series production, all the functions of the software, firmware, ASICs, complex and less complex function blocks are checked.

If a fault is detected during the function check, troubleshooting and repair will be performed at the repair price without requesting confirmation or interrupting the process. In the case of extensive wear or damage, no repairs will be performed. A fixed lump sum for expenses will be charged.

#### Benefits

- The component is checked and can be deployed again
- The component contains all the known improvements
- The customer's own spare parts stock is up-to-date
- Low price

### Spare parts services Return of diagnostic parts

#### Overview

Spare parts used for diagnostic purposes from the spare parts store can be returned within 3 months and a credit note for up to 85 % is issued.

For unused spare parts in their original packaging, you will receive a credit of 100 % in which case you will be charged a fixed price for handling.

#### Benefits

- Can be used for diagnostics
- Reduced spare parts inventories
- Low costs

### Spare parts services Stock reduction in spare parts store

### Spare parts services Extended spare part availability

#### Overview

Thanks to fast delivery of spare parts from Siemens, manufacturers and plant operators are able to reduce their spare parts inventories. Siemens offers an analysis for this purpose exactly indicating which parts must be available in the customer's stores for a specific combination of machines and which should be obtained directly from Siemens

#### Benefits

- Reduced costs
- Stock optimization
- Minimization of fault downtimes

#### Overview

We normally retain spare parts for all products and systems for a period of 10 years after discontinuation of product marketing.

In individual cases, when we do not carry spare parts, we will offer a repair.

For a wide range of products and systems, we extend the availability of spare parts. We can provide you with the current spare parts availability for your machines/plants as a service once you have registered online with identSNAPSHOT.

[www.siemens.com/identsnapshot/register](http://www.siemens.com/identsnapshot/register)

If you require longer availability of spare parts, please contact your regional sales representative.

#### Benefits

- Higher plant availability
- Investment protection
- Reduction of lifecycle costs

# SINUMERIK Manufacturing Excellence

## Siemens Industry Online Support

Unmatched complete service  
for the entire life cycle

For machine constructors, solution providers and plant operators: The service offering from Siemens Industry, Automation and Drive Technologies includes comprehensive services for a wide range of different users in all sectors of the manufacturing and process industry.

To accompany our products and systems, we offer integrated and structured services that provide valuable support in every phase of the life cycle of your machine or plant – from planning and implementation through commissioning as far as maintenance and modernization.

Our Service & Support accompanies you worldwide in all matters concerning automation and drives from Siemens. We provide direct on-site support in more than 100 countries through all phases of the life cycle of your machines and plants.

You have an experienced team of specialists at your side to provide active support and bundled know-how. Regular training courses and intensive contact among our employees – even across continents – ensure reliable service in the most diverse areas.

### Online Support

The comprehensive online information platform supports you in all aspects of our Service & Support at any time and from any location in the world.

[www.siemens.com/automation/service&support](http://www.siemens.com/automation/service&support)

### Technical Consulting

Support in planning and designing your project: From detailed actual-state analysis, definition of the goal and consulting on product and system questions right through to the creation of the automation solution.

### Technical Support

Expert advice on technical questions with a wide range of demand-optimized services for all our products and systems.

[www.siemens.com/automation/support-request](http://www.siemens.com/automation/support-request)

### Training

Extend your competitive edge – through practical know-how directly from the manufacturer.

[www.siemens.com/sitrain](http://www.siemens.com/sitrain)

Contact information is available in the Internet at:  
[www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)

### Engineering Support

Support during project engineering and development with services fine-tuned to your requirements, from configuration through to implementation of an automation project.

### Modernization

You can also rely on our support when it comes to modernization – with comprehensive services from the planning phase all the way to commissioning.

### Field Service

Our Field Service offers you services for commissioning and maintenance – to ensure that your machines and plants are always available.

### Service programs

Our service programs are selected service packages for an automation and drives system or product group. The individual services are coordinated with each other to ensure smooth coverage of the entire life cycle and support optimum use of your products and systems.

The services of a service program can be flexibly adapted at any time and used separately.

### Spare parts

In every sector worldwide, plants and systems are required to operate with constantly increasing reliability. We will provide you with the support you need to prevent a standstill from occurring in the first place: with a worldwide network and optimum logistics chains.

Examples of service programs:

- Service contracts
- Plant IT Security Services
- Life Cycle Services for Drive Engineering
- SIMATIC PCS 7 Life Cycle Services
- SINUMERIK Manufacturing Excellence
- SIMATIC Remote Support Services

Advantages at a glance:

- Reduced downtimes for increased productivity
- Optimized maintenance costs due to a tailored scope of services
- Costs that can be calculated and therefore planned
- Service reliability due to guaranteed response times and spare part delivery times
- Customer service personnel will be supported and relieved of additional tasks
- Comprehensive service from a single source, fewer interfaces and greater expertise

### Repairs

Downtimes cause problems in the plant as well as unnecessary costs. We can help you to reduce both to a minimum – with our worldwide repair facilities.

### Optimization

During the service life of machines and plants, there is often a great potential for increasing productivity or reducing costs. To help you achieve this potential, we are offering a complete range of optimization services.

Contact information is available in the Internet at:  
[www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)

# SINUMERIK Manufacturing Excellence

## SINORIX al-deco PLUS

### Object protection systems for machine tools

#### Overview

SINORIX al-deco PLUS are automated object protection systems for machine tools. SINORIX al-deco PLUS fights the fire where it breaks out – in the machine tool – without posing a risk to people, the environment, or technical components.

European law requires fire protection for fire-endangered machine tools and their equipment. SINORIX al-deco PLUS object protection systems meet the highest safety requirements in accordance with the new Machinery Directive 2006/42/EC. SINORIX al-deco PLUS is characterized by unique operator protection, current-free operation with regard to detection and extinguishing, online monitoring as well as automatic recording of all safety-related functions.

Moreover, SINORIX al-deco PLUS object protection systems are CE-compliant, meet all the relevant EU standards and are approved by the German Technical Inspectorate (TÜV).

#### Benefits

- Maximum safety for personnel, machine and environment
- Unique operator protection according to the latest machine directives
- Insensitive to all kinds of technical interferences
- Online monitoring for fast intervention
- Recording of all system data as safety-related proof
- Redundant monitoring of all safety-related functions
- Use of VdS-certified valves and self-monitoring components
- Efficiency based on well-proven control standards
- Double-secured prevention of tripping when machine door is open
- Only a qualified person is allowed to unlock the machine door after tripping of the system

#### Design

- 1 Extinguishing agent container
- 2 Safety box with pneumatic double disconnection of the detection line
- 3 DIMES measuring probe and valve
- 4 Detection line, flexible (LIFDES sensor)
- 5 Extinguishing nozzles
- 6 Manual release with pressure gauge
- 7 Hazardous working area
- 8 Interface for programming unit of the machine control system (visualization via display)
- 9 230 V AC

#### Function

SINORIX al-deco PLUS object protection systems meet the highest safety requirements in accordance with the new Machinery Directive 2006/42/EC and offer unique operator protection. This is ensured by double-secured cable routing in conjunction with redundant and self-monitoring components. Thanks to this technology, the machine tool cannot be operated until successful completion of a system check – and the machine door is unlocked only after successful and tested blocking of the extinguishing activation.

SINORIX al-deco PLUS ensures that the intended functions are carried out only if they do not endanger the safety and health of persons. This applies in particular if oxygen suppressing extinguishing media are used.

With SINORIX al-deco PLUS, fires are detected and extinguished purely pneumatically – with no electrical source and independently of the machine tool. As a result, SINORIX al-deco PLUS is insensitive to all kinds of technical interferences, and it is foolproof. This ensures continuous machine operation and reduces the maintenance overhead.

More information is available on the Internet at:

[www.siemens.com/sinorix](http://www.siemens.com/sinorix)

### Overview

#### *Complete equipment for machine tools and production systems*

Our supplied range of products and services also includes complete equipment for machine tools and production systems with all services in the process chain from consulting through to after-sales service.

We support you in the areas of engineering, production and logistics:

#### *Engineering support*

Siemens supports you with advice on design in accordance with standards and concepts for drive systems, control, operation and safety.

Our engineers configure for you in EPLAN P8 and other commonly used CAD systems, execute projects designed to cost and adapt your documents where necessary to UL or new systems.

Our Technical Competence Center Cabinets in Chemnitz supports you with selecting and optimizing the suitable control cabinet air-conditioning system. Apart from calculation and simulation, we also use instrumentation testing in our heat laboratory with load simulation.

We also offer the following services:

- Vibration measurements and control cabinet certification in the field
- Measurement of conducted interference voltages in our laboratory

#### *Production at a high level of quality*

Complete equipment is manufactured at a high industrial level. This means:

- Examining consistency of the job documentation
- Checking for adherence to current regulations
- Collision check in 3D layout, taking into account the free space required thermally and electrically
- Automatic preparation of enclosures, cables and cable bundles
- Automated inspection and shipment free of faults
- Documentation and traceability
- Declaration of conformity regarding the Low-Voltage Directive and manufacturer's declaration on machinery directive
- UL label on request

Cabinet engineering

Testing in the heat laboratory

# SINUMERIK Manufacturing Excellence

## Control cabinets

### Overview (continued)

#### Superior logistics

Everything from a single source offers you the following advantages:

- Cost savings for procurement, stockkeeping, financing
- Reduction in throughput times
- Justintime delivery

#### Individual support and maximum flexibility

Our technical consultants for complete equipment support customers and sales departments in the various regions. Our control cabinet customers are supported in the Systems Engineering Plant Chemnitz (WKC) by ordering centers and production teams that are permanently assigned to customers.

Distance does not present a problem; we also use web cams for consulting our customers.

Customer-specific logistics models, flexible production capacity and production areas as well as change management in all process phases ensure maximum flexibility.

#### Customized supplementary products

As part of its complete equipment program, Siemens also offers the development and construction of customized supplementary products, e.g. special operator panels and power supply systems.

#### Liability for defects

Of course we accept the same liability for defects for our complete equipment as for our SINUMERIK, SIMODRIVE and SINAMICS products.

Furthermore, you can use our worldwide repair service anywhere and at any time.

#### Your benefits

One partner, one quotation, one order, one delivery, one invoice, and one contact partner for liability of defects.

For series production or individual items, Siemens is your competent partner for complete equipment.

Worldwide repair service

Control cabinet with SINAMICS S120 in booksize format

### Overview

#### *Increase plant availability through certification of control cabinets*

With our control cabinet certification service, we offer to inspect the control cabinet documentation to ascertain compliance with the planning guidelines defined for the components. You receive the result of the inspection in the form of a report which contains specific recommendations as to how the control cabinet design needs to be improved.

With this information as a guide, the control cabinet design can be improved and the cabinet subsequently constructed to the highest quality standards.

When the machine manufacturer has completed assembling the control cabinet, the control cabinet design is inspected and subsequently certified at the manufacturer's site.

This certification process is primarily intended for series control cabinets, but could also be applied to single cabinets.

#### *Certification sequence*

- Inspection of the control cabinet documentation and presentation of results in a report
- Inspection of a fully assembled control cabinet with inspection report and certification at the manufacturer's site (single cabinet or sample of a series control cabinet)
- In the case of a series control cabinet, another inspection is performed on a cabinet from the type series after approximately 12 months.

### Benefits

- The control cabinet certification service helps to ensure a high quality of cabinet design, to prevent early failure of components as a result, for example, of inadequate cooling and to detect potential EMC problems.
- Certified control cabinet quality

### Selection and ordering data

| Description                                                    | Order No.                 |

## Logistics solutions

### Logistics solutions for our customers

#### Overview

#### *Flexible, uniform, successful*

With this motto we offer powerful logistics for our products individually tailored to your requirements, and uniformly from order up to delivery.

We optimize the complete logistics process between Siemens I DT Motion Control Systems and you.

This helps you to design your own processes faster, more simply and more cost-effectively.

Many of our customers have already chosen these solutions in various combinations.

#### Benefits

##### *Customer-oriented logistics solutions:*

- Modular range of services
- Tailored to your own logistics
- Flexible and reliable fulfillment of demands

##### *Customer-specific configuration:*

- Provision of complete packages
- Customizing

##### *Production-based delivery:*

- Machine-based generation of package
- Oriented according to your assembly sequence
- Low packaging overhead due to reusable containers for scheduled deliveries

##### *Global network for integrated logistics:*

- Utilization of Siemens transport network
- Tracking and tracing throughout the complete transport route
- Competence in export and customs processes

##### *Optimized customer connections:*

- Delivery on exact date according to schedule
- Directly to assembly location using ship-to-line

| Modules                                 | Service                                                                                                                                                                                                                                      | Specification                                                                                                                                                                                                   |

# SINUMERIK Manufacturing Excellence

## Components for basic and further CNC training

### SinuTrain for SINUMERIK Operate

#### Overview

SinuTrain for SINUMERIK Operate is a PC-based CNC training/ CNC programming software package. SinuTrain for SINUMERIK Operate enables completely identical operator control and CNC programming as on SINUMERIK CNC systems that are equipped with graphical user interface SINUMERIK Operate.

SinuTrain for SINUMERIK Operate taps into the following applications:

- Self-study or professional training of SINUMERIK operation and CNC programming
- Offline CNC program creation and simulation
- Professional presentation of SINUMERIK operation and CNC programming

To allow you to experience the advantages of using SinuTrain for SINUMERIK Operate, we can provide a trial version for 60 days. The trial version can be ordered on DVD-ROM for a nominal charge, or downloaded free of charge from the Internet.

#### Benefits

- User-friendly, accurate simulation of operation and CNC programming of SINUMERIK controls on the PC
- Maximum compatibility thanks to integrated original SINUMERIK CNC software
- Accurate simulation of machine operation with inexpensive virtual machine control panel
- State-of-the-art fully graphical CNC user interface with moving picture sequences for clarification of technological sequences (Animated Elements)
- Optimum training software with a wide CNC programming spectrum – from ISO and CNC high-level language to fully graphical machining step programming
- High process safety through realistic graphical CNC simulation – including multi-channel machining operations

#### Function

##### Technologies

SinuTrain for SINUMERIK Operate can be used for the following machining technologies:

- Milling (SinuTrain ShopMill and SinuTrain complete package)
- Turning (SinuTrain ShopTurn and SinuTrain complete package)
- Other technologies<sup>1)</sup> and multi-channel capability (SinuTrain complete package)

##### Adaptation to the machine

CNC programs created with SinuTrain for SINUMERIK Operate can be used on real machines. However, in this case, SinuTrain must be adapted to the actual SINUMERIK configuration of the machine. This adaptation can be made either by the user with the configuration tool or by a Siemens service specialist.

To allow operation of a larger array of machinery, several different configurations can be stored in SinuTrain for SINUMERIK Operate. In order to ensure maximum compatibility with different SINUMERIK software versions on the machine, multiple copies of SinuTrain for SINUMERIK Operate can be installed in the relevant software versions on one PC.

##### Accurate simulation of real operator control on the machine

With its fully-fledged, virtual machine control panel, SinuTrain for SINUMERIK Operate offers functions such as CNC Start, CNC Stop or feedrate and spindle override and can therefore be operated just like a real machine.

##### Online help

Like a SINUMERIK CNC, SinuTrain for SINUMERIK Operate also offers a comprehensive online help. In addition, the SinuTrain DVD-ROM includes training manuals for the self-study of SINUMERIK operating and programming procedures.

##### Programming, simulation and printing

- DIN/ISO programming with programGUIDE
- ShopMill/ShopTurn machining step programming
- Multi-channel programming with programSYNC (SinuTrain complete package only)
- Fully-fledged graphical CNC simulation
- TCP/IP Ethernet networking with machines
- Print function for DIN/ISO and ShopMill/ShopTurn machining step programs
- Integrated CAD reader for importing DXF files

<sup>1)</sup> For other technologies, consultation with the relevant machine manufacturer is recommended to ensure that the software can be optimally adapted to the CNC of the machine.

# SINUMERIK Manufacturing Excellence

## Components for basic and further CNC training

### SinuTrain for SINUMERIK Operate

#### Integration

SinuTrain for SINUMERIK Operate 2.6 SP1 can be used for:

- SINUMERIK 828D BASIC T
- SINUMERIK 828D software version 4.3 and higher<sup>1)</sup>
- SINUMERIK 840D sl from CNC software release 2.6 SP1

#### Requirements

Hardware:

- PC with 1.5 GHz processor (single core)
- RAM: 1 GB
- Hard disk: 2 GB of free memory space
- DVD drive for installation from DVD
- Graphic card: Minimum resolution 640 × 480 pixels
- USB port
- Mouse, keyboard
- Training keyboard (optional)

Software:

- Operating system Windows XP SP3 32-bit Professional/Home Edition (operating system Windows 7 32/64-bit available soon)
- Adobe Acrobat Reader

#### More information

The first steps in working with SINUMERIK Operate can be learned quickly and easily through a web-based training program.

You can download a free trial version of SinuTrain for SINUMERIK Operate from the Internet.

More information is available on the Internet at:

Software version 2.6 SP1 of the SinuTrain training software is required for SINUMERIK 828D BASIC, software version 4.3. To order this, enter "0-0" in the positions of the blue boxes, e.g.:

6FC5870-0YC2**0-0**YA0

If you want a different software version of the SinuTrain training software, please contact your local Siemens sales office or Regional Company.

<sup>1)</sup> In this case, software version 4.3 refers to the SINUMERIK 828D and not to SinuTrain.

### Overview

eLearning/training booklets offer you interactive learning concepts, which can be used in professional training from the basics right through to specialist training.

The interactive learning concept covers:

- Training booklets including examples in 6 different languages
- Interesting, graphically advanced training software on CD and the Internet.

The training software consists of high-quality, interactive multimedia programs, which guide the user from the basics of turning and milling through to operating and programming a SINUMERIK, and are also available as a self-study program. The Digital Prize has been awarded to this software.

### Training booklets

The training booklets are designed to offer the simplest introduction to programming/operating. They are primarily addressed to beginners, those who will use ShopMill/ShopTurn in the future or those starting out in its programming/operation. The booklets are also used for basic and further training.

### Self-study CDs

Training is now supported by the latest multimedia learning software. This software, which enables users to teach themselves the most important relationships and operation methods for ShopMill and ShopTurn, is called computer-based training (CBT). The instruction-based introduction saves you a great deal of time and, without expensive training, brings you interactively much closer to your goals than experimenting without any guidance on the control would do. These CDs should be used in conjunction with SinuTrain. They are increasingly used in schools and chambers of trade/chambers of industry and commerce for basic training. To this end, there is a test module to test the material covered, with a certificate awarded if the test is passed. The new SITRAIN tutorials offer you instructive software based on a virtual machine, providing a quick and easy introduction to CNC technology.

# SINUMERIK Manufacturing Excellence

## Training equipment

### SINUMERIK 840D sl training case

#### Overview

The SINUMERIK 840D sl training case is used for practicing the commissioning and servicing of the SINUMERIK 840D sl under realistic conditions. It can also be used in presentations.

The SINUMERIK 840D sl OP training case is required for operation (see right-hand side of page).

#### Design

- Case with rollers
- SINUMERIK 840D sl (NCU 720.2)
- SINAMICS drive for 2 axes
- 2 × 1FK7022-5AK71 motors with DRIVE-CLiQ interface
- 1 incremental and 1 absolute measuring system

The SINUMERIK 840D sl training case is supplied with the PLC program ready for demonstration. The SINUMERIK 840D sl OP training case is used as an operator control unit.

### SINUMERIK 840D sl OP training case

#### Overview

The SINUMERIK 840D sl OP training case and the SINUMERIK 840D sl training case are used together as an operating unit in order to practice the commissioning and servicing of the SINUMERIK 840D sl under realistic conditions. Both training cases can also be used in presentations.

#### Design

- Hard-top case
- SINUMERIK OP 010C operator panel with SINUMERIK PCU 50.3
- SINUMERIK MCP 483C IE machine control panel

The SINUMERIK 840D sl OP training case can only be used in conjunction with the SINUMERIK 840D sl training case.

| <b>SINUMERIK 840D sl OP training case</b> | <b>6ZB2410-0BB00</b> |

Overview

The SINUMERIK 840D sl training rack is used by trainees to practice operating, programming, commissioning and service tasks under realistic conditions.

Design

- Simulation panel including SIMATIC ET 200S input, output and IM modules
- SINUMERIK OP 012 operator panel front with SINUMERIK PCU 50.3
- SINUMERIK MCP 483 IE machine control panel
- SINUMERIK 840D sl (NCU 720.2)
- SINAMICS S120
  - Smart Line Module 5 kW
  - 1-axis module 3 A
  - 2-axis module 2 x 5 A
- 1 x 1FK7044-7AF71 synchronous motor with incremental encoder
- 1 x 1FK7060-5AF71 synchronous motor with absolute encoder
- 1 x 1LA7070-4AB00 standard asynchronous motor with HTL encoder
- Wiring prepared for Safety Integrated functionality.

The SINUMERIK 840D sl training rack is fully equipped and carries the CE mark; the adaptation programs are installed.

Customer-specific adaptations can be made.

# SINUMERIK Manufacturing Excellence Training

## Overview

*Faster and more applicable know-how:  
Hands-on training from the manufacturer*

**SITRAIN** – Training for Industry – provides you with comprehensive support in solving your tasks.

Training by the market leader in the industry enables you to make independent decisions with confidence. Especially where the optimum and efficient use of products and plants are concerned. You can eliminate deficiencies in existing plants, and exclude expensive faulty planning right from the beginning.

First-class know-how directly pays for itself: In shorter startup times, high-quality end products, faster troubleshooting and reduced downtimes. In other words, increased profits and lower costs.

### Achieve more with SITRAIN

- Shorter times for startup, maintenance and servicing
- Optimized production operations
- Reliable configuration and startup
- Minimization of plant downtimes
- Flexible plant adaptation to market requirements
- Compliance with quality standards in production
- Increased employee satisfaction and motivation
- Shorter familiarization times following changes in technology and staff

### SITRAIN highlights

#### Top trainers

Our trainers are skilled teachers with direct practical experience. Course developers have close contact with product development, and directly pass on their knowledge to the trainers.

#### Practical experience

The practical experience of our trainers enables them to teach theory effectively. But since theory can be pretty drab, we attach great importance to practical exercises which can comprise up to half of the course time. You can therefore immediately implement your new knowledge in practice. We train you on state-of-the-art methodically/didactically designed training equipment. This training approach will give you all the confidence you need.

#### Wide variety

With a total of about 300 local attendance courses, we train the complete range of Siemens Industry products as well as interaction of the products in systems.

## Overview (continued)

### Tailor-made training

We are only a short distance away. You can find us at more than 50 locations in Germany, and in 62 countries worldwide. You wish to have individual training instead of one of our 300 courses? Our solution: We will provide a program tailored exactly to your personal requirements. Training can be carried out in our Training Centers or at your company.

### The right mixture: Blended learning

"Blended learning" is a combination of various training media and sequences. For example, a local attendance course in a Training Center can be optimally supplemented by a teach-yourself program as preparation or follow-up. Additional effect: Reduced traveling costs and periods of absence.

**Comprehensive teaching support for educational institutions**

Cooperates  
with Education

Automation

**SIEMENS**

**Siemens Automation Cooperates with Education (SCE)**

offers a global system for sustained support of technical skills. SCE supports educational institutions in their teaching assignment in the industrial automation sector and offers added value in the form of partnerships, technical expertise, and know-how. As the technological leader, our comprehensive range of services can support you in the transfer of industrial knowledge.

**Our services at a glance**

- Training curriculums for your lessons
- Trainer packages for hands-on learning
- Courses convey up-to-date, specialist knowledge
- Support for your projects/textbooks
- Complete didactic solutions from our partners
- Personal contact for individual support

**Training curriculums for your lessons**

Use our profound industrial know-how for practice-oriented and individual design of your course. We offer you more than 90 didactically prepared training documents on the topics of automation and drives technology free of charge. These materials are perfectly matched to your curricula and syllabuses, and optimally suited for use with our trainer packages. This takes into account all aspects of a modern industrial solution: installation, configuration, programming, and commissioning. All documents, including projects, can be individually matched to your specific requirements.

Particular highlight: the new SIMATIC PCS 7 curriculums and trainer packages. Using plant simulation, you can pass on basic, practice-oriented PCS 7 knowledge at universities within about 60 hours (= 1 semester).

[www.siemens.com/sce/documents](http://www.siemens.com/sce/documents)

**Trainer packages for hands-on learning**

Our SCE trainer packages offer a specific combination of original industrial components which are perfectly matched to your requirements and can be conveniently used in your course. These price reduced bundles available exclusively to schools include innovative and flexible hardware and software packages. SCE can currently offer more than 80 SCE trainer packages including related equipment. These cover both the factory and process automation sectors. You can use them to impart the complete course contents on industrial automation at a very low cost.

Trainer packages are available for:

- Introduction to automation technology with LOGO! compact controller and SIMATIC S7-1200
- PLC engineering with SIMATIC S7 hardware and STEP 7 software
- Operator control and monitoring with SIMATIC HMI
- Industrial networking over bus systems with SIMATIC NET
- Sensor systems with VISION, RFID, and SIWAREX
- Process automation with SIMATIC PCS 7
- Networked drive and motion technologies with SINAMICS and SIMOTION
- CNC programming with SinuTrain

**Important ordering notes:**

Only the following institutions are authorized to obtain trainer packages: vocational schools, Colleges and Universities, in-house vocational training departments, non commercial research institutions and non commercial training departments.

To purchase a trainer package, you require a specific end-use certificate, which you can obtain from your regional sales office.

# SINUMERIK Manufacturing Excellence

## Siemens Automation Cooperates with Education

Know-how based on practical experience

### Comprehensive teaching support for educational institutions (continued)

#### *Courses convey up-to-date specialist knowledge*

Profit from our excellent know-how as the leader in industrial technologies. We offer you specific courses for automation and drive technology worldwide. These support you in the practice-oriented transferring of product and system know-how, are in conformance with curriculums, and derived from the training fields. Compact technical courses especially for use at universities are also available.

Our range of courses comprises a wide variety of training modules based on the principle of Totally Integrated Automation (TIA). The focus is on the same subject areas as with the SCE trainer packages.

Every PLC and drive course is oriented on state-of-the-art technology. Your graduates can thus be prepared optimally for their future professional life.

In some countries we are offering classes based on our training documents. Please inquire with your SCE contact partner.

[www.siemens.com/sce/contact](http://www.siemens.com/sce/contact)

#### *Support for your projects/textbooks*

Automation and drive technology is characterized by continuous and rapid developments. Service and Support therefore play an important role.

We can provide you with consulting for selected projects and support from your personal SCE contact as well as our web based and regional Customer Support.

As a particular service, SCE supports technical authors with our know-how as well as with intensive technical consulting. Siemens library of special textbooks covering the industrial automation sector provides an additional resource for you and your students. These can be found at the SCE web site.

[www.siemens.com/sce/contact](http://www.siemens.com/sce/contact)  
[www.siemens.com/sce/books](http://www.siemens.com/sce/books)

#### *Complete didactic solutions for your lessons*

Our partners for learning systems offer a wide range of training systems and solutions for use in your courses or laboratory.

These models have been designed based on our trainer packages and thus save you the time and cost of self-construction of individual components. The Partner systems provide you with simple and effective help in the fulfillment of your teaching assignment.

[www.siemens.com/sce/partner](http://www.siemens.com/sce/partner)

#### *Contact for individual support*

You can find your personal SCE contact on our Internet site. Your local SCE Promoter will answer all your questions concerning the complete SCE offering, and provide you with timely and competent information about innovations. When you encounter challenges, you can profit from our global team of excellence.

If a direct SCE contact is not listed for your country, please contact your local Siemens office.

[www.siemens.com/sce/contact](http://www.siemens.com/sce/contact)

#### *SCE Support Finder for your Internet request*

### Overview

A high-quality programmable controller or drive system can only be used to maximum effect if the user is aware of the performance of the CNC machine tool control and the machine tool drives as a result of intensive training and good technical documentation.

This is becoming more important due to the shorter innovation cycles of modern automation products and the convergence of electronics and mechanical engineering.

Comprehensive documentation is available for the SINUMERIK CNC systems and the SINAMICS S120 drive system, ranging from the Operating Manual, Programming Manual or Configuration Manual up to the Commissioning Manual.

Information is available in the following formats:

- Paper version, printed copy
- PDF file available for download on the Internet at:

[www.siemens.com/automation/support](http://www.siemens.com/automation/support)

More information is available on the Internet at:

[www.siemens.com/motioncontrol/docu](http://www.siemens.com/motioncontrol/docu)

### Customizing information

Whether for turning, milling, grinding or nibbling – machine manufacturers and machine operators can assemble their individual operating instructions on the Internet, for specific topics, such as programming and commissioning.

Machine manufacturers and end customers are not only able to assemble their own customized technical documents for a specific product or system, they can also generate complete libraries with individually configured contents. The content that matches your topic can be found from the full range of I IA&DT documentation stored under Service & Support using the operator interface and assembled using Drag & Drop into application-based libraries, generated and even combined with your own documentation. The self-generated collections can be saved in the commonly used RTF, PDF or XML formats.

More information is available on the Internet at:

[www.siemens.com/mdm](http://www.siemens.com/mdm)

#### Overview

#### CAD CREATOR – Dimension drawing and 2D/3D CAD generator

Thanks to the user-friendly operator interface of the CAD CREATOR, it is easy to configure controls, drives and motors. With the support of the CAD CREATOR, product-specific dimension drawings and 2D/3D CAD models can be created quickly. The CAD CREATOR assists the machine manufacturer's designers, offer drafting engineers and project engineers.

#### Benefits

- Provision of dimension drawings as 2D/3D-CAD models in mm and inches
- Display of 2D/3D CAD models and dimension drawings on integrated viewers
- With the online version, 3D models and dimension drawings can also be displayed in the form of a direct downloadable PDF
- Support for all general geometry interfaces STEP, IGES, Parasolid, SAT, VDA, and for special interfaces such as Ideas, NX, Solid Edge, Pro/Engineer, Autocad, Inventor, Mechanical Desktop, Catia and Solidworks
- Multi-language operator interface in English, French, German, Italian and Spanish, and direct Help (German, English)
- Dimension drawings and 2D/3D CAD models for:
  - Motors
    - 1FT6/1FT7/1FK7 synchronous motors
    - 1FE1 built-in synchronous motors
    - 1FW3 torque motors
    - 1FW6 built-in torque motors
    - 1FT6/1FT7/1FK7 geared motors
    - 1PH8 synchronous/asynchronous motors
    - 1PH7/1PH4/1PL6/1PM4/1PM6 asynchronous motors
    - 2SP1 motor spindles
    - 1FN3, 1FN6 linear motors
  - SINAMICS S110, SINAMICS S120
    - Control Units
    - Power Modules (Blocksize/Chassis/Combi)
    - Line Modules (Blocksize/Chassis)
    - Line-side components
    - Motor Modules (Blocksize/Chassis)
    - DC link components
    - Additional system components
    - Load-side power components
    - Encoder system connection
    - MOTION-CONNECT connection systems
  - SINUMERIK
    - CNC systems
    - Operator components for CNC systems
  - SIMOTION
    - SIMOTION D
    - SIMOTION C

The CAD CREATOR offers a variety of options for configuring, but also for conducting product searches:

- According to order number
- According to technical description

After successful configuration of the product, the dimension drawings and models are displayed with the integrated viewer and made available for export.

# SINUMERIK Solution Partners

## Introduction

### Overview

The SINUMERIK Solution Partners supplement the open SINUMERIK control with their own solutions:

- Specific add-on functions, e.g. tool break monitoring
- Tailored services for the CNC machine tool, e.g. machine modernization
- Supplementary components, e.g. robots, tools or measuring instruments

The solutions of the SINUMERIK Solution Partners are certified and tested and therefore offer maximum reliability and compatibility in productive use with the SINUMERIK control in production.

SINUMERIK Solution Partners assume responsibility for their own solutions, products and services.

## Solution Partners for specific add-on functions

### ARTIS GmbH

#### CTM tool and process monitoring

#### Overview

#### CTM tool and process monitoring

The autonomous CTM system (Computer integrated Tool and Machine Monitoring) from ARTIS can be integrated into the CNC and is used to monitor tools, machines and processes.

#### Benefits

- Fast integration resulting from minimized hardware and fieldbus technology
- Simple, fast installation of software
- No additional wiring in the solution without a sensor
- 4 independent monitoring channels on one CTM card
- Autonomous mode of operation, thus minimum load on the control
- System and sensors from a single source

Operator control of CTM as well as visualization can be integrated into the user interface of the CNC. Operation is clear, informative and easy to master following a short period of training.

Tool monitoring prevents the production of faulty parts or the occurrence of other damage resulting from worn, broken or missing tools. Bearing damage on motor spindles, tool unbalance and collisions are detected by the machine monitoring functions. The functions for process monitoring are responsible for observation of quality criteria, for example, the tolerances of tap-drill sizes and thread depths.

### ARTIS GmbH

#### Genior Modular tool and process monitoring

#### Overview

#### Genior Modular tool and process monitoring with no settings required for the SINUMERIK 840D sl control

Genior Modular is the ideal product for monitoring and controlling cutting processes in machine tools. The system is predominantly deployed for applications which demand automatic adaptation of monitoring functions to the process as well as operation without intervention by the operator.

Genior Modular increases productivity and reduces the operating costs of machine tools.

#### Benefits

- Protects metal-cutting processes
- Easy to use
- Requires no training
- Machine operator does not need to make adjustments
- Cycle times are shortened by optional adaptive control
- Simple to install and commission thanks to modular design
- Few adjustments required in the NC program
- Optimum utilization of tool life
- Automatic adaptation to cutting processes
- Can be expanded and scaled
- Future-oriented architecture with standard bus technologies
- Monitors tool breakage and missing tools
- Monitors tool wear
- Tool and machine protection
- Suitable for use in series production
- Visualization of signals on Siemens operator panels

### Balance Systems S.r.l. – Measuring and monitoring system for grinding machines

#### Overview

*Versatile building block system for measuring and monitoring grinding machines – VM25 for the SINUMERIK 840D sl control*

The VM25 system contains the hardware and software components required to ensure productivity, economy and quality of the grinding process – using either manual or automatic operations.

#### Software package – VM25-HMI

The user interface VM25-HMI can be easily integrated by the user into his application program, or activated as independent task that can be used immediately.

Thanks to a complete programming interface, based on an Active X library, the program can interact with the devices and the operator for managing the following functions:

- Balancing the grinding wheel at 1 or 2 planes, made possible by high precision balancing heads without torque effect (patented), to achieve the maximum surface quality of the ground workpiece
- Using acoustic, hydrophone and power sensors:
  - Determining the grinding wheel contact to optimize the machining and finishing cycles
  - Recording of the normal cutting characteristic patterns to monitor and signal process irregularities
- Comparative in-process measurement of the workpiece, with immediate correction feedback signal to the CNC/PLC for the diameter, the lengths and the current positions, as well as for roundness deviations (patented), to avoid missing parts and to secure consistent production quality
- FFT analysis to monitor machine vibration levels and diagnose faulty components
- Data collection referred to measurements, internal and external events – with subsequent transfer of this data to other suitable media for process analysis
- Network connection to a remote PC, in the master or slave mode, via teleservice

#### Benefits

- **Complete**  
Full, customized adaptation of the user interface using graphics libraries for data display, configuration and operation.
- **Flexible**  
Creation of different application levels through to complex, user-specific structures with the help of supplied templates.
- **Integrable**  
A Windows application enables monitoring of the control and process to be integrated into the HMI environment of the SINUMERIK 840D sl without the need for additional display devices.
- **Intelligent**  
Effective process control through comprehensive acquisition of process data.
- **Available**  
Open for additional expansions.

### Comara KG Intelligent feedrate control

#### Overview

#### Intelligent feedrate control

The intelligent software solution iCut tracks the stock removal process and intervenes automatically when required.

iCut measures the spindle output up to 500 times per second and adjusts the feedrate automatically to the current cutting conditions. Variations in allowance or cutter contact angle, different depths of cut, increased hardness or tool wear – the feedrate is as fast as possible, but as slow as necessary. The ideal feedrate in any situation. With a unique response time.

iCut always calculates on the basis of the programmed feedrate, which corresponds to 100 %. From the load values measured on the tool, iCut computes the ideal feedrate for the prevailing cutting conditions and increases or reduces the feedrate fully automatically (e.g. 70 % or 120 %).

#### Benefits

- Production time savings combined with high process stability

# SINUMERIK Solution Partners

## Solution Partners for specific add-on functions

**Dittel Messtechnik GmbH**  
Balancing and process monitoring system

**HOFMANN GmbH & Co. KG**  
Measuring and balancing technology

### Overview

#### Fully automatic balancing and process monitoring system 6000

The fully automatic balancing and process monitoring system 6000 can be completely remote-controlled from the control, and process signals can be displayed on the machine screen. All data of the balancing procedure and the structure-borne noise signals (AE) are therefore available online for the machine operator.

### Benefits

- User-friendly balancing system with non-contact transmission of signals and power makes it wear-free and maintenance-free
- 2 out-of-balance, 2 speed and 4 AE signal limits can be programmed
- Balancing heads are available with built-in AE sensor and neutral position of the balancing weights (spindle mounting, attachment and ring balancing systems), large balancing capacity within very small space, speeds up to 15000 rpm
- Tools for machine diagnostics (compliance, resonance)
- Connection facility for 4 structure-borne noise sensors, stationary or rotary
- AE sensor technology positioned directly at place of occurrence, resulting in high signal quality
- State-of-the-art evaluation of structure-borne noise for by-passing air grinding, monitoring of grinding process and dressing, 31 different settings can be permanently saved
- Envelope curve monitoring for dressing and grinding processes
- Representation of AE level over axis position
- Storage of measured AE signals on control PC or external PC
- Connection via RS232C interface or Ethernet

### Overview

#### Ring balancing system EMB 7000

The EMB 7000 ring balancing system is based on a simple concept. The vibrations generated on rotating systems due to imbalance are actively eliminated during rotation in fractions of seconds. Two unbalanced disks are permanently mounted on the machine spindle via thin ring bearings. A fast, intelligent controller senses the imbalance in the spindle, calculates and controls the two disks in the optimum position for compensating the imbalance. The two disks are electromagnetically adjusted by the stators into the calculated position extremely quickly.

### Benefits

- Works at spindle speeds up to 51000 rpm
- Positioning of the compensation rings in tenths of a second, even during the non-stationary acceleration phase
- Spindle monitoring systems
- 2-level balancing technology

# SINUMERIK Solution Partners

## Solution Partners for specific add-on functions

**Kai Müller GmbH**  
Teleservice with video

**MARPOSS S.p.A.**  
Laser tool monitoring

### Overview

#### Teleservice with video

VIDEO VISION is a video conferencing system that can be used worldwide and has been developed specifically for machine servicing. It enables the service engineers to operate the control as though they were on site. Through the simultaneous audio and video connection, the engineer is able to examine the machine and to provide the user with expert support in order to carry out repairs by means of remote instructions.

VIDEO VISION NM permits flexible use. This video conferencing system contains all the VIDEO VISION functions, but can also be installed on devices such as notebooks, and permits connection via ISDN, an analog line, GSM, or the Internet.

In the case of larger machines and production systems, the audio-video-radio link is recommended, which can transmit sound and video images wirelessly over distances of up to 70 m (230 ft). The supplied ear-phones and an integrated directional microphone even permit use in a very loud production environment.

VIDEO VISION EVI is appropriate for pure video monitoring of the machine. You can monitor your complete machine environment from the control using up to 7 pan-and-tilt zoom cameras.

#### Requirements for VIDEO VISION:

- Telecommunications link (ISDN connection recommended)

### Overview

#### Software for Marposs spindle measurements, monitoring of contact tools and laser tool monitoring on machine tools

Measuring cycles for part and tool measuring cycles with Marposs Mida measuring heads and Mida lasers. Easy programming thanks to the special user interface. All the necessary measurements can be performed on the part and on the tool for rapid setup of the machine, high-speed monitoring of the part before and after the machining cycle as well as continuous monitoring of the safe range of stress.

Tool measurements with Mida laser:

- Tool status and breakage
- Measuring the length and diameter of the tool
- Checking and updating the length and diameter of the tool
- Checking the condition of the cutting profile of the tool
- Measuring and updating the cutting radius and determining the deflection range
- Compensating the thermal deviation of the machine axes

Part measurements with Mida spindle measuring heads:

- Protected positioning of the measuring head
- Measuring of drilled holes, pins, pockets and shoulders
- Single surface measurement
- Measuring the internal and external cross-arm

# SINUMERIK Solution Partners

## Solution Partners for specific add-on functions

**MCU GmbH & Co. KG**  
Tool and process monitoring

**Montronix GmbH**  
Tool and process monitoring

### Overview

#### Tool and process monitoring

The Toolinspect module communicates with the SINUMERIK CNC with software version V04.02.x and higher over PROFIBUS DP or also via analog signals. Visualization on the operator panel of the control is implemented with the module via a TCP/IP or RS232C interface.

### Benefits

- No need to set parameters and limits
- Easy operation using 3 function keys
- MDE data acquisition
- Adaptive control
- Diagnostics tool for process optimization
- 19 languages available online

The Toolinspect module monitors tools on cutting machines. The data required for this task is transferred preferably via a PROFIBUS DP interface from a CNC to the Toolinspect module.

The monitoring strategy is selected autonomously by the integrated software, depending on the tool or machining mode. The necessary parameters are determined and entered once only and machine-specifically, in consultation with the machine manufacturer. Thereafter, no changes or adaptation of parameters and limits are necessary.

### Overview

#### Tool and process monitoring

Montronix monitoring systems and the support of the Montronix employees will ensure that you have your machining process under control. Montronix is your competent partner worldwide for all machining tasks.

Montronix systems provide you with the following advantages:

- Tool monitoring and protection
- Shorter machine downtimes
- Avoidance of faults and reduction in rejects
- Improvement in quality
- Optimization of machining process

The visualization software (M-View) enables the machine operator to evaluate the machining process rapidly and precisely. The graphic display indicates process deviations, broken tools, increasing wear, and collisions which can be statistically recorded and evaluated.

The IPM (Integrated Process Monitor) operator control and visualization software combines operation and simultaneous visualization. Communication is implemented via an RS232C or RS485 interface.

It is possible to switch from the machining process to process visualization at any time. A fast, reliable working method is ensured by the clear and simple operation.

## Solution Partners for specific add-on functions

### OMATIVE Systems Real-time feedrate optimization

#### Overview

#### ADAPTIVE CONTROL & MONITORING (ACM) for real-time feedrate optimization

The OMATIVE ACM system is fully integrated into SINUMERIK NCK version 6.5 or higher and into the SINUMERIK HMI environment's user interface purely as a software solution.

ACM can be used for every cutting operation in feedrate-control, monitoring and event-recording modes.

In **feedrate-control** mode, ACM measures the current spindle load and continuously calculates the optimum feedrate for each individual tool and material. The feedrate is set to the highest possible value automatically and in real time. This reduces cycle times and also prevents tool breakage and damage to the tool and spindle, particularly during critical roughing operations and in rough-finishing applications. If the tool becomes overloaded, ACM stabilizes to an acceptable value automatically. This value is defined via algorithms in the internal expert system and, if necessary, the feed is suspended. In this way, tool breakage can also be detected.

In **monitoring** mode, the spindle load is monitored without adaptation of the feedrate. If the spindle becomes underloaded or overloaded, an alarm is triggered and, if necessary, the machine is stopped. Missing tools or tool breakages are also detected.

In **event-recording** mode, the machine's event data are saved or transferred via the PC network using the OMATIVE Pro software and can be analyzed as machine and production reports. Event recording is performed automatically in feedrate-control and monitoring modes.

### Renishaw Plc. Non-contact tool monitoring

#### Overview

#### Non-contact tool monitoring

Renishaw has developed software that can be used in conjunction with the systems for non-contact tool control NC1, NC3 and NC4.

The program routines contain the following functions:

- Static length measurement, e.g. drill, tap
- Length determination with spindle rotating, e.g. end mill, milling heads
- High-speed tool-breakage monitoring
- Automatic tool measuring
- Monitoring of the cutting edge geometry and profile monitoring for breakage of a single edge
- Temperature compensation

Renishaw systems for tool monitoring are available as carrier systems or module systems which cover a wide range of different applications. All systems use the MicroHole technology that provides protection to IP68 even during the measuring procedure. The NC4 system also offers an integrated PassiveSeal, which maintains full protection even if the compressed air supply is interrupted. Active drip suppression prevents false response caused by drops of coolant.

# SINUMERIK Solution Partners

## Solution Partners for specific add-on functions

PROMETEC GmbH  
PROMOS 2

PROMETEC GmbH  
PROSIN PLUS

### Overview

#### PROMOS 2 modular tool and process monitoring system with PROVIS software

The modular process monitoring system provides fast collision detection and reliable tool monitoring for all machining processes:

- Detection of tool breakage
- Detection of idle passes
- Detection of tool contact
- Detection of tool wear

This functionality can be achieved in particular for machining centers, rotary indexing machines and transfer lines without the need for special sensors if the control system is equipped with digital drives, e.g., SIMODRIVE 611 digital.

Furthermore, additional functions are available for the visualization and, therefore, diagnosis and optimization of the machining operations. For the user, this means:

- Avoidance of most tool breakage incidents by prompt, automatic tool replacement
- Tool or workpiece damage is minimized, consequential damage prevented
- Increase in productivity without increased use of personnel
- Increase in quality through process optimization

In addition to machine and tool protection, PROMOS 2 also helps to reduce machining times and improve part quality. Operator inputs are made centrally using the operator panel of the control.

The modular PROMOS 2 system is available with different performance data (e.g., available monitoring functions, number of monitorable tools, crash data recorder) to permit optimum matching to the machining task with regard to cost and function. PROMOS 2 can be operated with all PROMETEC sensors (force, expansion, distance, active power, torque, vibration, structure-borne noise, sound emission, fluid noise).

[www.prometec.com](http://www.prometec.com)

### Overview

#### PROSIN PLUS tool monitoring as integrated software solution for the SINUMERIK 840D sl control

The low-cost PROSIN PLUS software permits direct access to the current values of the digital drives of the machine tool. If a tool breaks, the current of the associated drive changes; this value is increased in the case of a blunt tool. With PROSIN PLUS, additional sensors and even complete monitoring units can be omitted.

Features:

- Break detection for drills, from approx. 2 mm (0.08 in) (depending on rated spindle power)
- Operator control using SINUMERIK operator panels
- No additional hardware required
- Only one operator side and extremely easy to operate
- Very easy to retrofit
- Up to 120 different cuts of a CNC program can be monitored with 3 thresholds for missing tool, tool in contact with workpiece, tool wear, and tool overload
- Monitoring of the working value of the currents of the main and feed drives and therefore the cutting work of the tool for qualified in-process detection of tool breakage and tool wear
- Workpiece-related saving of monitoring settings in the machine control

PROSIN PLUS can protect the machine, tool holder, and tool from overload and therefore reduce secondary damage resulting from tool breakage, tool wear, incorrect CNC parameter entries, incorrect clamping of the workpieces, etc.

PROSIN PLUS is therefore just as suitable for mass production of metal parts, e.g. in the automotive subsupplier industry, to achieve enhanced quality and cost reductions at the same time, as for production of small batches, because only one workpiece is needed for training the tools.

A particular highlight of PROSIN PLUS is the reliable detection of wear on rough-machining tools. This assumes mass production in which the batch size is significantly larger than the number of working tools.

PROSIN PLUS is patented according to EP 1 276 027 and its derivations.

# SINUMERIK Solution Partners

## Solution Partners for specific add-on functions

**PROMETEC GmbH**  
ACfeed

### Overview

*Adaptive control for intelligent automatic feed optimization as integrated software solution for the SINUMERIK 840D sl control*

From the load values measured on the tool, ACfeed computes the ideal feedrate for the prevailing cutting conditions and increases or reduces the feedrate fully automatically (e.g. 70 % or 140 %). The spindle load is always set to an optimum 100 %. This not only saves time and significantly increases the number of pieces machined between tool resharpening, but also protects tools against overloading.

ACfeed is used primarily for milling operations, but has proven increasingly successful as a tool for other types of machining, e.g. as a cutting force control for turning operations. An integrated monitoring system completes the ACfeed function package.

Optimized for automotive production: Enormous time savings and increased process stability thanks to feed optimization. The total cycle time is reduced on average by 5 %.

Optimized for aircraft production: Increased reliability of machining because tools are not overloaded and due to individually adjustable limiting of machining forces (even without feedrate increase) with same degree of precision.

Intelligent feedrate control for compensating tool loading with:

- Variations in allowance on cast or forged parts
- Variations in material hardness and structure
- Contours with varying cutting depths or uneven surfaces
- Materials, e.g. stainless steel, tool steel, that are difficult to cut
- Wide variations in surface properties, e.g. hard casting skin, flame-cut edges
- Varying cutting widths

**PROMETEC GmbH**  
MCI (Machine Condition Indicator)

### Overview

*MCI – Machine Condition Indicator with MCIview software: Machine status monitoring through evaluation of a single vibration sensor*

Using a sensor mounted on the spindle housing, MCI acquires the vibration signals from a machine tool fully automatically and continuously in all the different machine states of the production process, e.g., cutting, tool changes, spindle run-up, acceleration and braking of axes.

MCI also tests the spindle and slide during no-load operation at predefined intervals.

The MCI hardware acquires and stores the sensor data and processes them using an integrated digital signal processor. The signals are conditioned by a variety of analytical processes, e.g. Fast Fourier Transformation, RMS,  $\hat{F}$ , and can also be monitored on the basis of predefined threshold values.

The objective is to generate, store and monitor trends. Characteristics measured for each cycle, cut or tool are stored; these include, for example, maximum values, performance values, average values, standard deviations. If these characteristic values exceed a defined threshold, a warning or alarm is displayed. This system allows early detection of typical symptoms of wear on the machine and critical changes in the cutting process.

Furthermore, MCI triggers a crash limit at extreme vibration acceleration levels to shut down the machine immediately.

Separating the measurements into "machining" and "non-machining" means that causes of problems can be identified quickly: For example, if extremely high values are measured during the machining process, but the values measured are perfectly normal during tool changes, axis traversal and when the same spindle is running under no load, it is clear that the tool cutting conditions need to be optimized as the spindle and axes are obviously not the cause of the problem.

The MCI data which can be viewed online on the control can be displayed and stored at any time via an interface installed on the housing of the machine or control cabinet.

The trends can then be analyzed for non-conformances in offline mode and compared with the data of other machines of the same type. Data can be archived centrally and accessed via the company's intranet.

Condition monitoring requires only one vibration sensor in the machine if this is optimally positioned – further sensors can be fitted for supplementary functions such as tool imbalance or tool seat detection (TSD).

## Solution Partners for specific add-on functions

SEQUOIA IT S.r.l.  
Vibration monitoring and collision detection

### Overview

### SeTAC, the triaxial system for vibration monitoring and collision detection

Identification of abnormal collisions and vibrations through digital real-time alarms (response time less than 1 ms), directly integrated into the machine.

#### Main characteristics of SeTAC:

- Built-in self-diagnostics able to ensure full measurement reliability
- Triaxial analysis with a measurement range of  $\pm 18$  g per axis
- High precision of both high and low frequency analysis
- Ability to permanently store up to 12000 vibration events, indicating the time and amplitude of phenomena
- Configurable for all types of industrial application

### Overview (continued)

#### Main applications of SeTAC:

- Reduces and avoids damage to the machine tool by triggering an alarm in the case of a machine standstill as soon as an abnormal collision or vibration occurs (digital alarm triggered in less than 1 ms from the start of the event)
- Black box function. The course of the collisions and vibrations on the monitored machine is reconstructed
- Detection of the degree of unbalance through digital alarms with several thresholds
- Monitoring of specific mechanical components or specific behaviors, e.g. chattering
- The instrument can be integrated with the machine control chain through change in behavior depending on the vibration data

# SINUMERIK Solution Partners

## Solution Partners with adapted services

**LQ Mechatronik-Systeme GmbH**  
Complete mechatronic installation systems

### Overview

**Complete mechatronic installation systems**  
*Versatile and profitable.*

Complete installation systems pay for themselves. And not just the electrical system, but also the mechanical, hydraulic and pneumatic systems. For this reason, we have developed solutions that make it easy for you to switch to greater efficiency in development and installation, step-by-step.

#### *Ready to install and functionally tested.*

MOTION-CONNECT cables, carrier, media hoses, sheet metal parts and add-on parts, strain-relief systems – all these components will be assembled by us into a complete energy management system, perfectly tuned to the application and motion of the machine, and tested for 100 % functionality. We operate our own development laboratory for the purpose of promoting standardization and modularization with a simultaneous increase in quality.

#### *Modern logistics system for more reliable installation.*

Flexible manufacturing processes ensure fast single-item and batch production with a high degree of quality. With our modern materials logistics systems, we can respond to customer requests quickly. Thanks to our own fleet, we can meet delivery deadlines to an accuracy of one hour.

#### *Available worldwide.*

We deliver power carrier systems that are ready to install and develop special installation and transport frames for them, for national and international shipping. In accordance with your requirements, we can deliver the carriers to any location in the world in a condition that is fully ready for final assembly.

#### Products and services:

- Preassembled and ready to install energy management systems with MOTION-CONNECT connection systems
- Installation modules and cable sets
- Fluid and pneumatic modules
- Completely preassembled machine installations, e.g. equipment plates
- Development, design, including construction of prototypes
- Documentation (2 and 3-dimensional)
- Logistics: State-of-the-art materials logistics is supplemented by machine-specific transport trolleys
- Update service: Planning and implementation of the inbound and outbound control logistics in response to parts list changes
- Service: Spare parts supply, repairs, refurbishments, commissioning and maintenance contracts

### Benefits

- Certified SINUMERIK Solution Partner with outstanding experience in offering integrated, perfectly tailored solutions
- Use of original products, e.g. MOTION-CONNECT cables
- Reduce the number of suppliers and orders
- Reduce stockholding costs for cables, carriers, hoses, plates, etc. down to zero
- Reduce throughput times in production
- React to changes in the flow of orders with flexibility
- Minimize machine standstill times with complete systems
- 100 % tested energy management systems
- 2 year warranty on the complete power carrier system
- Delivery on special transport frames – economical and environmentally friendly

### More information

### Overview

#### Professional automation solutions with the rcs1 robot control

- Retrofitting of proven, reliable hardware (robots and machines) with the latest control technology
- New robots with the user-friendly, extremely flexible rcs1 control
- Sensory automation solutions for complex, innovative applications

#### Hardware concept

As an open, universal PC-based robot control, the rcs1 control is based on the latest, proven Siemens standards.

#### Sensor motor technology

The rcs1 is designed to allow the versatile integration of sensor technology. Apart from extensions for optical sensors, e.g. for real-time seam tracing, in particular stable processes for a hard contact force control robolab sensing system (rss1) are available as an extension, which simplify numerous robotic applications, or even make them possible for the first time.

### Overview (continued)

#### Controllable axes

In its standard configuration, the rcs1 is designed as a 6-axis control, but it can be expanded considerably, e.g. up to a 16-axis control with coordinated control of additional axes and belt synchronization.

#### Kinematics

The rcs1 control is not limited to classic manipulator kinematics: Kinematics can be custom defined, e.g. for Cartesian robots, gantry robots, swivel/rotating tables.

#### Programming

Various user interfaces are available as options for programming the robot system:

- Hand-held unit (HHU) with touch screen
- Graphic user interface
- 3D simulation and programming system
- Programming interface in C/C++

#### Programming languages

- Manual programming with a 6D force sensor
- SRCL program interpreter
- C/C++ program library

**EMUGE-FRANKEN GmbH & Co. KG**  
Precision tools

### Overview

#### *Precision tools that save time and money*

EMUGE-FRANKEN is a group of companies that offers state-of-the-art thread cutting, testing, clamping and milling technology – and has done so for over 90 years.

Our products:

- Taps
- Thread gauges
- Thread cutters
- Tapping chucks
- Twist drills
- HSS milling cutters
- VHM milling cutters
- Threading dies
- Workpiece clamping

The broadly based customer sectors include, alongside the automotive industry, also the power plant and aeronautical industry, as well as mechanical and plant engineering. 50 % of the products are exported throughout the world.

Over 1000 employees in Lauf and Rückersdorf, Germany, as well as 300 employees worldwide are responsible for the extensive range of products and services offered. All activities are targeted at optimizing manufacturing processes, to show the customer solutions that will save time and money.

With a range of tools that comprises more than 110000 items, EMUGE-FRANKEN covers a broad spectrum in order to satisfy the growing requirements of the market. Apart from the ex-stock standard product range, special tools are developed in cooperation with customers which are tuned to the respective process and to the machine requirements.

### Overview (continued)

This team of experts provides the following services for the products offered by EMUGE-FRANKEN:

- Worldwide hotline advice and support for the solution of technical problems
- Cooperation for planning overall concepts and suggestions for optimizing the production procedure at the customer's site
- Trials are implemented free-of-charge with customer-specific materials in a purpose-built test area for optimum tool selection and recommendation
- Development and construction of customer-specific special tools
- Deployment of service technicians
- Provision of product-related training and seminars worldwide

### More information

EMUGE-FRANKEN is represented in 43 countries. You can find your local contact through our service centers in Lauf and Rückersdorf in Germany, or on the Internet.

compensating of machine tools**

### Overview

The LaserTRACER in a large gantry milling machine

Using the ETALON system, the geometric variations of a machine can be measured quickly and very accurately. The traversing paths of the machine are automatically traced in space by the LaserTRACER and evaluated using a patented process. Extremely high accuracy is achieved as a result of distance measurements in space using a high-resolution interferometer. The procedure is also used to calibrate highly accurate coordinate measuring devices.

The LaserTRACER-MT can be used as an alternative.

### Overview (continued)

The automatically generated compensation data can be directly transferred to a SINUMERIK CNC. Using the SINUMERIK Volumetric Compensation System (VCS) option, systematic deviations are compensated throughout the working area. This usually multiplies the spatial accuracy of the machine.

Comparison of kinematic single errors (according to ISO 230) of an uncompensated and a compensated machine (ETALON compensation data and VCS application)

### Benefits

- Extensive, highly-accurate analysis of the geometry of the machine in the shortest possible time
- Significant increase in accuracy of the machine due to total error compensation in combination with the SINUMERIK option Volumetric Compensation System (VCS)
- Recalibration of the machine provides maximum accuracy even after a long operating time, collision, or lowering of the foundations
- Calibration of linear and rotary axes
- High-speed machine testing in accordance with ISO 230, diagonal measuring according to ISO 230-6, and circularity test without manual alignment

### Application

Machine tools and measuring devices in various sizes and types and all accuracy classes.

### More information

For detailed information, contact the system supplier directly:

# SINUMERIK Solution Partners

## Solution Partners with supplementary add-on components

### KUKA Roboter GmbH Industrial robots

#### Overview

#### *KUKA – leading global supplier of industrial robots*

KUKA Roboter GmbH with headquarters in Augsburg, Germany, is part of KUKA Aktiengesellschaft and one of the leading global suppliers of industrial robots. Their core area of expertise is the development, production and marketing of industrial robots, controls and software.

The company is the market leader in Germany and Europe, and is in third place worldwide. KUKA Roboter GmbH is represented by its 25 subsidiaries in the most important markets in Europe, America and Asia.

The mxAutomation interface, a product of KUKA Roboter GmbH, enables KUKA robots to interface easily with SINUMERIK 840D sl. Operation of the robot, including parts management, is implemented on a SINUMERIK operating panel front. The operator therefore has a "Single point of operation".

#### Benefits

- Fast integration of robot automation in production
- Easy operation and programming with SINUMERIK
- Dedicated channel for handling
- Programming in the NC program or teaching of the robot with SINUMERIK
- SINUMERIK 840D sl as a central operating station: Single point of operation
- Easy retooling
- Integration of alarm system and diagnostics

#### Application

Possible application areas in machine tool automation:

- Loading and unloading of machines
- Chaining several machines
- Handling workpiece pallets
- Tool change
- Cleaning workpieces
- Blowing off assemblies
- Sorting
- Quality control and measuring
- Labeling
- Deburring

Industries and target groups:

- Electrical engineering
- Plastics industry
- Clean-room sector
- Photovoltaics

## Approvals

### Overview

*Many products in this catalog are in compliance with UL/CSA requirements and are labeled with the appropriate certification markings.*

All certifications, certificates, declarations of conformance, test certificates, e.g. CE, UL, Safety Integrated have been performed with the associated system components as they are described in the Catalogs and Configuration Manuals.

The certificates are only valid if the products are used with the described system components, are installed according to the Installation Guidelines and are used for their intended purpose.

For cases that deviate from these conditions, the company or person marketing these products is responsible in having the certificates appropriately re-issued.

**UL: Underwriters Laboratories**  
*Independent public testing institution in North America*

Approval marks:

- **UL** for end-products, tested by UL in accordance with UL standard
- **cUL** for end-products, tested by UL in accordance with CSA standard
- **cULus** for end-products, tested by UL in accordance with UL and CSA standards
- **UR** for mounting parts in end products, tested by UL in accordance with UL standard
- **cUR** for mounting parts in end products, tested by UL in accordance with CSA standard
- **cURus** for mounting parts in end-products, tested by UL in accordance with UL and CSA standards

Test standards:

- SINUMERIK: Standard UL 508
- SINAMICS: Standard UL 508C
- Motors: Standard UL 547

Product category/File No.:

- SINUMERIK: E164110
- SINAMICS: E192450
- Motors: E93429

**TUV: TUV Rheinland of North America Inc.**  
*Independent public testing institution in North America*  
*National recognized testing laboratory (NRTL)*

Approval mark:

- **cTUVus** tested by TUV in accordance with UL and CSA standards

**CSA: Canadian Standard Association**  
*Independent public testing institution in Canada*

Approval mark:

- **CSA** Tested by CSA in accordance with CSA standard

Test standard:

- Standard CAN/CSA-C22.2 No. 0-M91/No. 14-05/No. 142-M1987

## Partners at Industry Automation and Drive Technologies

## Overview

At Siemens Industry Automation and Drive Technologies, more than 85 000 people are resolutely pursuing the same goal: long-term improvement of your competitive ability. We are committed to this goal. Thanks to our commitment, we continue to set new standards in automation and drive technology. In all industries – worldwide.

At your service locally, around the globe for consulting, sales, training, service, support, spare parts ... on the entire Industry Automation and Drive Technologies range.

Your personal contact can be found in our Contacts Database at:

[www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)

You start by selecting a

- Country,
- City/Region,
- Service.

## Information and Ordering in the Internet and on DVD

### Siemens Industry Automation and Drive Technologies in the WWW

A detailed knowledge of the range of products and services available is essential when planning and configuring automation systems. It goes without saying that this information must always be fully up-to-date.

Siemens Industry Automation and Drive Technologies has therefore built up a comprehensive range of information in the World Wide Web, which offers quick and easy access to all data required.

Under the address

[www.siemens.com/industry](http://www.siemens.com/industry)

you will find everything you need to know about products, systems and services.

### Product Selection Using the Interactive Catalog CA 01 of Industry

Detailed information together with convenient interactive functions:

The interactive catalog CA 01 covers more than 80 000 products and thus provides a full summary of the Siemens Industry Automation and Drive Technologies product base.

Here you will find everything that you need to solve tasks in the fields of automation, switchgear, installation and drives. All information is linked into a user interface which is easy to work with and intuitive.

After selecting the product of your choice you can order at the press of a button, by fax or by online link.

Information on the interactive catalog CA 01 can be found in the Internet under

[www.siemens.com/automation/ca01](http://www.siemens.com/automation/ca01)

or on DVD.

### Easy Shopping with the Industry Mall

The Industry Mall is the virtual department store of Siemens AG in the Internet. Here you have access to a huge range of products presented in electronic catalogs in an informative and attractive way.

Data transfer via EDIFACT allows the whole procedure from selection through ordering to tracking of the order to be carried out online via the Internet.

Numerous functions are available to support you.

For example, powerful search functions make it easy to find the required products, which can be immediately checked for availability. Customer-specific discounts and preparation of quotes can be carried out online as well as order tracking and tracing.

Please visit the Industry Mall on the Internet under:

[www.siemens.com/industrymall](http://www.siemens.com/industrymall)

## Social Media

Connect with Siemens through social media: visit our social networking sites for a wealth of useful information, demos on products and services, the opportunity to provide feedback, to exchange information and ideas with customers and other Siemens employees, and much, much more. Stay in the know and follow us on the ever-expanding global network of social media.

Connect with Siemens Industry at our central access point:

[www.siemens.com/industry/socialmedia](http://www.siemens.com/industry/socialmedia)

Or via our product pages at:

[www.siemens.com/automation](http://www.siemens.com/automation)

or

[www.siemens.com/drives](http://www.siemens.com/drives)

To find out more about Siemens' current social media activities visit us at:

[www.siemens.com/socialmedia](http://www.siemens.com/socialmedia)

## Mobile Media

We are also constantly expanding our offering of cross-platform apps for smartphones and tablets. You will find the current Siemens apps at your app store.

# Appendix

## DT Configurator selection guide

### Overview

#### Product description

The DT Configurator has been developed to support selection of drive train products from the product range. It is available as a selection guide offline within the interactive Catalog CA 01 (DVD-ROM), and online in the Industry Mall. The DT Configurator makes it easier to find the appropriate drive solution. The preselection helps you narrow down the product spectrum and determine the right product group. Motors and drives can be selected according to the specific application.

The DT Configurator supplies the correct order number as well as the associated documentation.

| ambient temperature<br>Umgebungstemperatur                                 |                                                                                                  |
| altitude above sea level<br>Höhe über Meeresspiegel                        |                                                                                                  |
| standards and specifications<br>Normen und Vorschriften                    |                                                                                                  |

It can display operating instructions, factory test certificates, terminal box documentation, etc. and generates data sheets, dimension drawings and a start-up calculation for the relevant products. It can also be used to identify a suitable drive for the selected motor.

3D models in a wide variety of 3D formats are also available.

The comprehensive help system not only explains the program functions, but also provides access to detailed technical background knowledge.

## DT Configurator selection guide

### Overview (continued)

#### Product range

The DT Configurator encompasses the following:

- Product range for low-voltage motors
- MICROMASTER 4 inverters
- SINAMICS G110 standard inverters
- SINAMICS G120 standard inverters
- SINAMICS G110D distributed inverters
- SINAMICS G120D distributed inverters
- SINAMICS S110 servo drives

including:

- 2D/3D model generator for motors and drives
- Data sheet generator
- Start-up calculation
- Comprehensive product-specific documentation

#### System requirements

- PC with 1.5 GHz CPU or faster
- Operating system:
  - Windows XP
  - Windows NT 4.0 (SP6 and higher)
  - Windows Vista
  - Windows 7
- At least 1 GB RAM (2 GB recommended)
- Screen resolution 1024 × 768, graphics with more than 256 colors, small fonts
- DVD drive for offline version (CA 01)
- Windows-compatible sound card
- Windows-compatible mouse

#### Offline access in the interactive catalog CA 01

The interactive catalog CA 01 – the offline mall of Siemens Industry Automation & Drive Technologies – contains over 100000 products with approximately 5 million possible drive system product variants.

The CA 01 catalog can be installed as a light or full version from the DVD-ROM directly onto your hard disk or network. The DT Configurator can then be found in the main menu of the CA 01 under the "Selection guide" tab.

### Overview (continued)

#### Online access in the Siemens Mall

In addition, the DT Configurator can be used in the Internet without requiring any installation. The DT Configurator can be found in the Siemens Industry Mall at the following address:

[www.siemens.com/dt-configurator](http://www.siemens.com/dt-configurator)

#### Selection and ordering data

## Siemens Industry Online Support

### Knowledge Base on DVD

For locations without online connections to the Internet there are excerpts of the free part of the information sources available on DVD (Service & Support Knowledge Base). This DVD contains all the latest product information at the time of production (FAQs, Downloads, Tips and Tricks, Updates) as well as general information on Service & Support..

You can run the Knowledge Base DVD Edition without installation. The DVD also includes a full-text search and will be updated every 4 months.

Just the same as our online offer in the Internet, the Service & Support Knowledge Base on DVD comes complete in 5 languages (English, French, German, Italian, Spanish).

You can order the **Service & Support Knowledge Base DVD** from your Siemens contact.

### Automation Value Card

#### Small card – great support

The Automation Value Card is an integral component of the comprehensive service concept with which Siemens Automation and Drives will accompany you in each phase of your automation project.

It doesn't matter whether you want just specific services from our Technical Support or want to purchase something on our Online portal, you can always pay with your Automation Value Card. No invoicing, transparent and safe. With your personal card number and associated PIN you can view the state of your account and all transactions at any time.

Services on card. This is how it's done.

Card number and PIN are on the back of the Automation Value Card. When delivered, the PIN is covered by a scratch field, guaranteeing that the full credit is on the card.

By entering the card number and PIN you have full access to the Service & Support services being offered. The charge for the services procured is debited from the credits on your Automation Value Card.

All the services offered are marked in currency-neutral credits, so you can use the Automation Value Card worldwide.

Order your Automation and Value Card easily and comfortably like a product with your sales contact.

| Description                  | Order No.                 |
|------------------------------|---------------------------|
| <b>Automation Value Card</b> |                           |
| 200 Credits                  | <b>6ES7997-0BA00-0XA0</b> |
| 500 Credits                  | <b>6ES7997-0BB00-0XA0</b> |
| 1 000 Credits                | <b>6ES7997-0BC00-0XA0</b> |
| 10 000 Credits               | <b>6ES7997-0BG00-0XA0</b> |

Detailed information on the services offered is available on our Internet site at:

### Overview

#### Software types

Software requiring a license is categorized into types. The following software types have been defined:

- Engineering software
- Runtime software

#### Engineering software

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing. Data generated with engineering software and executable programs can be duplicated for your own use or for use by third parties free-of-charge.

#### Runtime software

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc. The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge. You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc. Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of delivery can be found in the readme file supplied with the relevant product(s).

#### License types

Siemens Industry Automation & Drive Technologies offers various types of software license:

- Floating license
- Single license
- Rental license
- Rental floating license
- Trial license
- Demo license
- Demo floating license

#### Floating license

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed. The concurrent user is the person using the program. Use begins when the software is started. A license is required for each concurrent user.

#### Single license

Unlike the floating license, a single license permits only one installation of the software per license. The type of use licensed is specified in the ordering data and in the Certificate of License (CoL). Types of use include for example per instance, per axis, per channel, etc. One single license is required for each type of use defined.

#### Rental license

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific period of time (the operating hours do not have to be consecutive). One license is required for each installation of the software.

#### Rental floating license

The rental floating license corresponds to the rental license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

#### Trial license

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes. It can be transferred to another license.

#### Demo license

The demo license support the "sporadic use" of engineering software in a non-productive context, for example, use for testing and evaluation purposes. It can be transferred to another license. After the installation of the license key, the software can be operated for a specific period of time, whereby usage can be interrupted as often as required. One license is required per installation of the software.

#### Demo floating license

The demo floating license corresponds to the demo license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

#### Certificate of license (CoL)

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

#### Downgrading

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

#### Delivery versions

Software is constantly being updated. The following delivery versions

- PowerPack
- Upgrade

can be used to access updates.

Existing bug fixes are supplied with the ServicePack version.

#### PowerPack

PowerPacks can be used to upgrade to more powerful software. The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed. A separate PowerPack must be purchased for each original license of the software to be replaced.

# Appendix

## Notes on software

### Software Licenses

#### Overview (continued)

##### *Upgrade*

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.

The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.

A separate upgrade must be purchased for each original license of the software to be upgraded.

##### *ServicePack*

ServicePacks are used to debug existing products.

ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

##### *License key*

Siemens Industry Automation & Drive Technologies supplies software products with and without license keys.

The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).

The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

##### *Software Update Service (SUS)*

As part of the SUS contract, all software updates for the respective product are made available to you free of charge for a period of one year from the invoice date. The contract will automatically be extended for one year if it is not canceled three months before it expires.

The possession of the current version of the respective software is a basic condition for entering into an SUS contract.

You can download explanations concerning license conditions from [www.siemens.com/automation/salesmaterial-as/catalog/en/terms\\_of\\_trade\\_en.pdf](http://www.siemens.com/automation/salesmaterial-as/catalog/en/terms_of_trade_en.pdf)

#### Overview

The "General License Conditions for Software Products for Automation and Drives" are applicable for supplies and deliveries of I DT software products.

#### *Legal notes during setup for new software products*

All software products feature a uniform reference to the license conditions. The license conditions are enclosed either with the documentation or in the software pack. When software is downloaded from the Internet, the license contract is displayed before the ordering procedure and must be accepted by the user before downloading can continue.

#### Note:

This software is protected by German and/or US copyright laws and the regulations of international agreements. Unauthorized reproduction or sale of this software or parts of it is a criminal offense. This will lead to criminal and civil prosecution, and may result in significant fines and/or claims for damages. Prior to installing and using the software, please read the applicable license conditions for this software. You will find these in the documentation or packaging.

If you have received this software on a CD-ROM that is marked "Trial version", or accompanying software that is licensed for your use, the software is only permitted to be used for test and validation purposes in accordance with the accompanying conditions for the trial license. To this end, it is necessary for programs, software libraries, etc. are installed on your computer. We therefore urgently recommend that installation is performed on a single-user computer or on a computer that is not used in the production process or for storing important data, since it cannot be completely excluded that existing files will be modified or overwritten. We accept no liability whatsoever for damage and/or data losses that result from this installation or the non-observance of this warning. Every other type of use of this software is only permitted if you are in possession of a valid license from Siemens is obtained.

If you are not in possession of a valid license that can be proven by presenting an appropriate Certificate of License/software product certificate, please abort installation immediately and contact a Siemens office without delay to avoid claims for damages.

#### Overview (continued)

#### *Software Update Services*

##### **Order**

To order the Software Update Service, an order number must be specified. The Software Update Service can be ordered when the software products are ordered or at a later date. Subsequent orders require that the ordering party is in possession at least of a single license.

##### Note:

It is recommended that the Software Update Service is ordered as early as possible. If a new software version of a software product is released for delivery by Siemens, only those customers will receive it automatically who are entered in the appropriate delivery list at Siemens at this time. Previous software versions, or the current software version are not supplied when the Software Update Service is ordered. The Software Update Service requires that the software product is up-to-date at the time of completion of the contract for the Software Update Service.

##### **Delivery**

When a Software Update Service is ordered, you will be sent the contractual conditions of this service and the price is due for payment. At the same time, you will be included in a delivery list for the software product to be updated. If Siemens releases a new software version for the corresponding software product for general sale (function version or product version), it will be delivered automatically to the goods recipient specified in the delivery address within the contract period.

#### More information

##### *Security note*

Bei Software zur Fernwartung oder Anbindung an übergeordnete Netze sind geeignete Schutzmaßnahmen (u. a. Industrial-Security, z. B. Netzwerksegmentierung) zu ergreifen, um einen sicheren Betrieb der Anlage zu gewährleisten. Additional information about Industrial Security can be found in the Internet under

[www.siemens.com/industrialsecurity](http://www.siemens.com/industrialsecurity)

**Your opinion is important to us!**

Our catalog should be an important and frequently used document.

For this reason we are continuously endeavoring to improve it.

A small request on our part to you:

Please take time to fill in the following form and fax it to us.

Or send us an e-mail.

Thank You!

**We invite you to grade our catalog on a point system from 1 (= good) to 6 (= poor):**

Do the contents of the catalog live up to your expectations? ☐

Do the technical details meet your expectations? ☐

Is the information easy to find? ☐

How would you assess the graphics and tables? ☐

Can the texts be readily understood? ☐

**Did you find any printing errors? – Improvement suggestions?**

# Appendix

Notes

### Explanation of the raw material/metal surcharges<sup>1)</sup>

#### Surcharge calculation

To compensate for variations in the price of the raw materials silver, copper, aluminum, lead, gold, dysprosium<sup>2)</sup> and/or neodym<sup>2)</sup>, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharges are calculated in accordance with the following criteria:

- Basic official price of the raw material  
Basic official price from the day prior to receipt of the order or prior to release order (daily price) for<sup>3)</sup>  
- Silver (sales price, processed)  
- Gold (sales price, processed)  
and for<sup>4)</sup>  
- Copper (lower DEL notation + 1 %)  
- Aluminum (aluminum in cables)  
- Lead (lead in cables)
- Metal factor of the products  
Certain products are displayed with a metal factor. The metal factor determines the official price (for those raw materials concerned) as of which the metal surcharges are applied and the calculation method used (weight or percentage method). An exact explanation is given below.

#### Structure of the metal factor

The metal factor consists of several digits; the first digit indicates whether the percentage method of calculation refers to the list price or a possible discounted price (customer net price) (L = list price / N = customer net price).

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

|           |                                                        |
|-----------|--------------------------------------------------------|
| 1st digit | List or customer net price using the percentage method |
| 2nd digit | for silver (AG)                                        |
| 3rd digit | for copper (CU)                                        |
| 4th digit | for aluminum (AL)                                      |
| 5th digit | for lead (PB)                                          |
| 6th digit | for gold (AU)                                          |
| 7th digit | for dysprosium (Dy) <sup>2)</sup>                      |
| 8th digit | for neodym (Nd) <sup>2)</sup>                          |

#### Weight method

The weight method uses the basic official price, the daily price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the daily price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. The raw material weight can be found in the respective product descriptions.

#### Percentage method

Use of the percentage method is indicated by the letters A-Z at the respective digit of the metal factor.

The surcharge is increased – dependent on the deviation of the daily price compared with the basic official price – using the percentage method in "steps" and consequently offers surcharges that remain constant within the framework of this "step range". A higher percentage rate is charged for each new step. The respective percentage level can be found in the table below.

#### Metal factor examples

## Metal surcharges

### Explanation of the raw material/metal surcharges for dysprosium and neodym (rare earths)

#### Surcharge calculation

To compensate for variations in the price of the raw materials silver<sup>1)</sup>, copper<sup>1)</sup>, aluminum<sup>1)</sup>, lead<sup>1)</sup>, gold<sup>1)</sup>, dysprosium and/or neodym, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. The surcharge for dysprosium and neodym is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharge is calculated in accordance with the following criteria:

- Basic official price of the raw material<sup>2)</sup>  
Three-month basic average price (see below) in the period before the quarter in which the order was received or the release order took place (= average official price) for  
- dysprosium (Dy metal, 99 % min. FOB China; USD/kg)  
- neodym (Nd metal, 99 % min. FOB China; USD/kg)
- Metal factor of the products  
Certain products are displayed with a metal factor. The metal factor indicates (for those raw materials concerned) the basic official price as of which the surcharges for dysprosium and neodym are calculated using the weight method. An exact explanation of the metal factor is given below.

#### Three-month average price

The prices of rare earths vary according to the foreign currency, and there is no freely accessible stock exchange listing. This makes it more difficult for all parties involved to monitor changes in price. In order to avoid continuous adjustment of the surcharges, but to still ensure fair, transparent pricing, an average price is calculated over a three-month period using the average monthly foreign exchange rate from USD to EUR (source: European Central Bank). Since not all facts are immediately available at the start of each month, a one-month buffer is allowed before the new average price applies.

Examples of calculation of the average official price:

| Period for calculation of the average price: | Period during which the order/release order is effected and the average price applies: |
|----------------------------------------------|----------------------------------------------------------------------------------------|
| Sep 2012 – Nov 2012                          | Q1 in 2013 (Jan – Mar)                                                                 |
| Dec 2012 – Feb 2013                          | Q2 in 2013 (Apr – Jun)                                                                 |
| Mar 2013 – May 2013                          | Q3 in 2013 (Jul – Sep)                                                                 |
| Jun 2013 – Aug 2013                          | Q4 in 2013 (Oct – Dec)                                                                 |

#### Structure of the metal factor

The metal factor consists of several digits; the first digit is not relevant to the calculation of dysprosium and neodym.

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

|           |                                                        |
|-----------|--------------------------------------------------------|
| 1st digit | List or customer net price using the percentage method |
| 2nd digit | for silver (AG) <sup>1)</sup>                          |
| 3rd digit | for copper (CU) <sup>1)</sup>                          |
| 4th digit | for aluminum (AL) <sup>1)</sup>                        |
| 5th digit | for lead (PB) <sup>1)</sup>                            |
| 6th digit | for gold (AU) <sup>1)</sup>                            |
| 7th digit | for dysprosium (Dy)                                    |
| 8th digit | for neodym (Nd)                                        |

#### Weight method

The weight method uses the basic official price, the average price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the average price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. Your Sales contact can inform you of the raw material weight.

#### Metal factor examples

|         |                                                       |
|---------|-------------------------------------------------------|
| -----71 |                                                       |
| ↑       | No basis necessary                                    |
| ↑       | No surcharge for silver                               |
| ↑       | No surcharge for copper                               |
| ↑       | No surcharge for aluminum                             |
| ↑       | No surcharge for lead                                 |
| ↑       | No surcharge for gold                                 |
| ↑       | Dysprosium acc. to weight, basic official price 300 € |
| ↑       | Neodym acc. to weight, basic official price 50 €      |

# Appendix

## Conditions of sale and delivery

### 1. General Provisions

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

#### 1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"<sup>1)</sup> and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office in Germany"<sup>1)</sup> and,
- for other supplies and services, the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>.

#### 1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"<sup>1)</sup> and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office outside of Germany"<sup>1)</sup> and
- for other supplies and/or services, the "General Conditions for Supplies of Siemens Industry for Customers with a Seat or Registered Office outside of Germany"<sup>1)</sup>.

### 2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

You will find a detailed explanation of the metal factor on the page headed "Metal surcharges".

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

### 3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

### 4. Export regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export of goods listed in this catalog may be subject to licensing requirements. We will indicate in the delivery details whether licenses are required under German, European and US export lists. Goods labeled with "AL" not equal to "N" are subject to European or German export authorization when being exported out of the EU. Goods labeled with "ECCN" not equal to "N" are subject to US re-export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Even without a label, or with label "AL:N" or "ECCN:N", authorization may be required i.a. due to the final disposition and intended use of goods.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.
