## CD-ROM for Catalog NC 62 · 2012

In the CD-ROM that accompanies Catalog NC 62 · 2012, you will find:

- Information about planning/configuring based on the technical documentation; additional technical documentation can be found under:  
[www.siemens.com/automation/support](http://www.siemens.com/automation/support)
- Dimensional drawings of our motors in PDF/ DXF format or via CAD CREATOR  
[www.siemens.com/cadcreator](http://www.siemens.com/cadcreator)
- Glossary for the explanation of terms and functions
- Catalog NC 62 · 2012 in electronic form (PDF format)

### Hardware and software requirements:

- Intel Pentium 1 GHz or higher
- Minimum 512 MB of RAM
- Screen resolution 1024 × 768 pixels
- CD-Rom drive, at least 16x
- Windows XP/Vista/7
- Acrobat Reader 7.0 or higher
- Microsoft Internet Explorer V6.0 (SP2) or higher

### Start

Insert the CD-ROM into the CD-ROM drive.

The program starts automatically.

If the AutoRun function is not activated in your system, start file start.hta from the CD-ROM using the Windows Explorer.

### Note

Installation is not necessary to view the information on this CD-ROM. This does not apply, however, when using dimensional drawings in DXF format.

### Hotline

Please send any questions or suggestions to:

[docu.motioncontrol@siemens.com](mailto:docu.motioncontrol@siemens.com)

## Answers for industry.

Siemens Industry answers the challenges in the manufacturing and the process industry as well as in the building automation business. Our drive and automation solutions based on Totally Integrated Automation (TIA) and Totally Integrated Power (TIP) are employed in all kinds of industry. In the manufacturing and the process industry. In industrial as well as in functional buildings.

Siemens offers automation, drive, and low-voltage switching technology as well as industrial software from standard products up to entire industry solutions. The industry software enables our industry customers to optimize the entire value chain – from product design and development through manufacture and sales up to after-sales service. Our electrical and mechanical components offer integrated technologies for the entire drive train – from couplings to gear units, from motors to control and drive solutions for all engineering industries. Our technology platform TIP offers robust solutions for power distribution.

The high quality of our products sets industry-wide benchmarks. High environmental aims are part of our eco-management, and we implement these aims consistently. Right from product design, possible effects on the environment are examined. Hence many of our products and systems are RoHS compliant (Restriction of Hazardous Substances). As a matter of course, our production sites are certified according to DIN EN ISO 14001, but to us, environmental protection also means most efficient utilization of valuable resources. The best example are our energy-efficient drives with energy savings up to 60 %.

Check out the opportunities our automation and drive solutions provide. And discover how you can sustainably enhance your competitive edge with us.

# Setting standards in productivity and competitiveness.

**Totally Integrated Automation.**

### TIA is characterized by its unique continuity.

It provides maximum transparency at all levels with reduced interfacing requirements – covering the field level, production control level, up to the corporate management level. With TIA you also profit throughout the complete life cycle of your plant – starting with the initial planning steps through operation up to modernization, where we offer a high measure of investment security resulting from continuity in the further development of our products and from reducing the number of interfaces to a minimum.

### The unique continuity is already a defined characteristic at the development stage of our products and systems.

The result: maximum interoperability – covering the controller, HMI, drives, up to the process control system. This reduces the complexity of the automation solution in your plant. You will experience this, for example, in the engineering phase of the automation solution in the form of reduced time requirements and cost, or during operation using the continuous diagnostics facilities of Totally Integrated Automation for increasing the availability of your plant.

Thanks to Totally Integrated Automation, Siemens provides an integrated basis for the implementation of customized automation solutions – in all industries from inbound to outbound.

# Introduction

## SINUMERIK 840D sl Type 1B – Open, flexible, powerful

1

### Overview

The SINUMERIK 840D sl is an open, flexible and powerful CNC-system based on the design of SINAMICS S120 for up to 93 axes.

With characteristics that describe it as decentralized, scalable, open, network-capable and offering a broad range of functions, the SINUMERIK 840D sl is suitable for use in almost every machining technology and sets benchmarks for dynamic response, precision and network integratability.

The SINUMERIK 840D sl offers the user uniformity in its programming, operation and machining cycles. With its efficiency in programming, installation and commissioning, this system platform is characterized by its optimum design, innovative NC-functionality, communication and openness.

The SINUMERIK 840D sl is available in several performance variants and can thus be perfectly customized to the machine and the machining operation in the appropriate field of technology or sector.

The SINUMERIK 840D sl premium CNC is the ideal control for every machining technology – whether it is turning, milling, grinding or a combination of these for multi-tasking machines.

#### *Simply innovative*

Once again, the SINUMERIK 840D sl proves its innovative power with new, high-performance milling and turning functions, extremely short machining times coupled with excellent surface finish and perfect integration of turn-milling and mill-turning applications.

SINUMERIK 840D sl is the premium CNC system for multi-tasking machines. Several performance variants provide even greater flexibility and openness so that machines can be individually configured when required.

The modern SINUMERIK Operate user interface permits simple and efficient operation on multi-channel machines.

With the programSYNC option, it is possible to synchronize multi-channel machining operations easily and efficiently.

Through the use of simulation, an exemplary quality of visualization of multichannel machining operations is attainable with SINUMERIK 840D sl. Handling modules or tool changes, for example, can also be controlled, programmed and visualized in another channel. For even more flexible and cost-effective manufacturing.

#### *Versatile*

The system platform provides an extensive range of options for all machining technologies as well as innovative functions for all machine tool applications. SINUMERIK 840D sl can be deployed around the world in a variety of machining technologies, such as turning, drilling, milling, grinding, laser, nibbling, stamping, as well as in multi-tasking machines, i.e. for mill-turning and turn-milling applications.

The SINUMERIK 840D sl is the ideal control for tool and mold making, high-speed-cutting applications, woodworking and glass processing, composite machining in the aviation and aerospace industries, for manufacturing in the Power Generation and medical technology sectors, for handling applications, in transfer lines, on rotary indexing machines and for mass production and shopfloor manufacturing.

Overview (continued)

# Introduction

## SINUMERIK 840D sl Type 1B – Open, flexible, powerful

1

### Design

SINUMERIK 840D sl can be configured to suit your individual requirements. The consistently modular CNC-concept makes it possible to implement innovative machines which are tailored to individual needs. The hardware and software can be scaled independently of one another. The system can be configured flexibly for each machine and every manufacturing environment, even when the operating conditions are tough.

#### *Distributed and flexible structure*

One important feature of the SINUMERIK 840D sl is its distributed and simplified system structure – fully integrated into the design and communications structure of the SINAMICS S120 drive system. SINUMERIK 840D sl combines CNC, HMI, PLC, closed-loop control and communication tasks on one SINUMERIK NC-Unit (NCU). For increased operating performance (HMI), the SINUMERIK PCU 50.5 industrial PC can be used. The number of NC-axes can be increased to 93 with NCU-Link.

The rugged CNC system platform offers great scope for positioning components in the machine thanks to the distributed components for operation, drive and I/O. The components can be positioned at a distance of up to 100 m (328 ft) from each other. It is therefore possible, for example, to simultaneously connect up to four distributed OPs to one NCU/PCU. Thanks to the provision of an intelligent suppression mechanism, it is also possible to use more than four operator panels. Even the powerful multiprocessor NCU modules can be set up separately at a distance of up to 100 m from the SINAMICS S120 drive system.

SINUMERIK 840D sl BASIC –  
Entry into the premium class with up to 6 axes.

SINUMERIK 840D sl Type 1B –  
The new, higher-performance ratings class.

# Introduction

## SINUMERIK MDynamics – Milling expertise in a package

1

### Overview

SINUMERIK MDynamics offers technology packages that consist of CNC hardware, intelligent CNC functions and CAD/CAM solutions for 3-axis and 5-axis milling machines.

Whether the emphasis is focused on precise machining, perfect surface finishes or high process reliability – milling during high-speed cutting places high demands on the process chain.

With this in mind, Siemens has bundled its entire milling expertise in the SINUMERIK MDynamics technology packages for 3-axis and 5-axis milling – including the innovative Advanced Surface motion control for perfect surfaces. This ensures that the best technological know-how is available to every sector that demands high precision, quality and speed. And this all coupled with simplicity of operation and a continuous CAD/CAM/CNC process chain.

### SINUMERIK MDynamics scope of functions for SINUMERIK 840D sl

#### 3-axis/3-axis and 2-axis machining

#### 5-axis machining

#### Functions included in the package

- |                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

# SINUMERIK Operate – Cost-effective production on multi-tasking machines

1

## Overview

The SINUMERIK 840D sl supports multi-tasking machines for workpiece manufacturing in a single operation. It offers the full scope of functions for machining components on a machining center – even for switchover between different technologies. The SINUMERIK Operate user interface provides integrated turning functions for milling applications, milling functions for turning applications and also supports B-axis kinematics and multitools to achieve even greater cost efficiency in production.

### Simple operation of multi-tasking machines

The SINUMERIK Operate user interface provides integrated turning functions for milling applications and integrated milling functions for turning applications, augmented with innovative measuring cycles in the Animated Element design.

The usability and look and feel of the interface is absolutely identical – even during changeover between different technologies. The tool management system makes it easy to handle all turning tools, milling tools and multitools in a uniform interface. Functions such as the alignment and setting of turning and milling tools as well as turning and milling cycles including contour programming have been added to the programming tools in programGUIDE. A function for simulating multi-tasking programs is also immediately available, offering even greater machining efficiency.

### Efficient tool management

For the efficient management of tool data including all detailed information, SINUMERIK Operate features an expanded tool management system for milling, drilling and turning tools. Tool and magazine data are displayed with all details in a single screen. Furthermore, the user has access to all tool parameters including those which relate to combined technologies. All tool types including turning tools are clearly displayed as icons.

Even complex tools such as multitools which make tool changes superfluous and boost manufacturing productivity are supported by SINUMERIK so that they can be used in multi-tasking machines.

Aligning the turning-milling tool and swiveling the coordinate system for turning or milling.

# Introduction

## SINUMERIK Ctrl-Energy – Improved energy efficiency

1

### Overview

As technology leader in the field of CNC engineering, Siemens can offer functions which are not only technologically advanced, but which are also designed to boost the energy efficiency of the machine. The SINUMERIK Ctrl-Energy portfolio includes an extensive range of energy-efficient systems, solutions and services.

#### Ctrl-E Analysis

Using the Ctrl-E Analysis function, SINUMERIK CNCs acquire not only the energy consumption of the drive system, but also the energy consumption of the entire machine. This makes it possible for the machine user to analyze the energy consumption per workpiece and to subsequently devise an optimized machining strategy. With the Ctrl+E shortcut, the machine operator can visualize energy consumption at the touch of a button.

#### Dynamic energy management

SINAMICS S120 drive systems are designed to allow dynamic energy management in the DC link and are capable of highly efficient regenerative feedback. This means that energy produced during braking is not converted to heat by braking resistors, but stored first in the DC link so that it can be recovered to the grid. Moreover, drive axes can be optionally utilized as kinetic energy stores with the result that all energy stays within the drive system with virtually no losses.

#### Ctrl-E Profiles

Ctrl-E Profiles gives the machine manufacturer a configuring platform for controlling the energy-saving modes of the machine. This means that specific energy consumers can be shut down when the machine is idle. With the Ctrl+E shortcut, the operator can quickly and easily influence the energy-saving modes.

#### Flux reduction and reactive power compensation

SINAMICS S120 drive systems allow automatic flux reduction during partial-load operation of asynchronous spindles, thereby resulting in a reduction of unnecessary heat losses. Intelligent Active Line infeed/regenerative feedback modules can be used to fully compensate the machine's reactive power, so making it unnecessary to install costly, high-loss reactive power compensation equipment.

Visualization of energy consumption

With integrated reactive power compensation

- 2/56 Diagnostic functions and maintenance

The main functions of the SINUMERIK 840D sl are listed in the function overview.

You can use this list to gain quick and selective access to individual functions.

The designation E in the name of the SINUMERIK 840DE sl control indicates that it is the export version, i.e. the control can be exported with the functions specified in the table.

The information in the overview of functions of SINUMERIK controls is based on the following software versions:

| Control system    | Software version |
|-------------------|------------------|
| SINUMERIK 840D sl | 4.4 SP2          |

## SINUMERIK 840D sl Type 1B

2

### Overview

SINUMERIK 840D sl offers modularity, openness, flexibility and uniform structures for operation, programming, and visualization. It provides a system platform with trend-setting functions for almost all technologies.

Integrated into the SINAMICS S120 drive system and complemented by the SIMATIC S7-300 automation system, the SINUMERIK 840D sl forms a complete digital system that is ideally suited for the mid to upper performance range.

SINUMERIK 840D sl is characterized by:

- A high degree of flexibility
- Excellent dynamic response and precision
- Optimum integration into networks

### Benefits

- Outstanding performance and flexibility for multi-axis systems of average to high complexity thanks to scalable hardware and software
- Universal openness of the user interface, the PLC and the NC kernel to allow integration of your specialist know-how
- Integrated safety functions for man and machine: SINUMERIK Safety Integrated
- Comprehensive range of products for integrating machine tools into communication, engineering and production processes: SINUMERIK Integrate

### Application

The SINUMERIK 840D sl can be deployed around the world for the following technologies:

- Turning
- Drilling
- Milling
- Grinding
- Laser
- Nibbling
- Punching
- Tool and mold making
- High-speed cutting applications
- Woodworking and glass processing
- Handling
- Transfer lines
- Rotary indexing machines
- Mass production
- Jobshop production

The SINUMERIK 840DE sl is available as an export version for use in countries where approval is required.

### Design

SINUMERIK 840D sl combines CNC, HMI, PLC, closed-loop control and communication tasks on one SINUMERIK NCU (NCU 710.3 PN, NCU 720.3 PN, NCU 730.3 PN).

For operation, programming and visualization, the corresponding HMI software is already integrated into the CNC software for the NCU and therefore executes on the high-performance NCU multi-processor module. For enhanced operating performance, the SINUMERIK PCU 50.5 industrial PC can be used.

Up to 4 distributed OPs can be operated on one NCU/PCU. The operator panel can be installed as a Thin Client at a distance of up to 100 m (328 ft).

The high-performance NCU multi-processor module can be installed to the left of the Line Module of the SINAMICS S120 drive system. If necessary, the NCU can be installed separately at a distance of up to 100 m (328 ft). MOTION-CONNECT DRIVE-CLiQ cables from Siemens are used for the connections.

SINUMERIK 840D sl offers integrated PROFINET functionality and supports PROFINET CBA and PROFINET IO.

### Matched modular system

The SINUMERIK 840D sl CNC is modular in design, offering outstanding flexibility and openness for any machine application. Entirely in line with the motto "Mix and Match", the components can be perfectly matched to each other – tailored precisely to the requirements of the machine builder and the subsequent operating environment of the machine.

### Function

#### Performance and flexibility

The scalability of the hardware and software – both in the CNC and the operating area – provides exceptional conditions for using SINUMERIK 840D sl in many sectors. The possibilities range from simple positioning tasks up to complex multi-axis systems. We offer different types of NCU for your machining tasks.

A total of 8 axes is provided by SINUMERIK 840D sl with NCU 710.3 PN, while the number of axes can be increased to a maximum of 31 in combination with the NCU 720.3 PN/NCU 730.3 PN. A total of 3 x 31 axes is possible with the CBE30-2 Link Module.

Siemens has bundled its entire milling expertise into the SINUMERIK MDynamics technology packages which allow users to attain outstanding milling results in terms of perfect surface quality, precision, quality and speed:

- Powerful CNC hardware and intelligent CNC functions
- Simple operation
- Unique CAD/CAM/CNC process chain
- Technological expertise in all sectors

Use of an NCU 720.3 PN or NCU 730.3 PN is recommended where excellent dynamic response and accuracy are required for mold making applications or in the High-Speed-Cutting (HSC) sector.

#### PROFINET functionality

PROFINET is the leading Industrial Ethernet Standard. PROFINET is based on tried and tested IT standards and fully supports TCP/IP – for company-wide data transfer across all levels. It also offers integrated diagnostics and fail-safe communication to ensure maximum plant availability, modular machine concepts for outstanding flexibility as well as very fast transfer rates and wireless LAN applications for significantly enhanced performance.

PROFINET IO is a communication concept for the implementation of modular, distributed applications. PROFINET IO is based on Industrial Ethernet and allows distributed field and I/O equipment to be connected to the NCU. 128 PROFINET IO devices can be operated as IO controllers.

The integrated PROFINET CBA (Component Based Automation) functionality for machine-to-machine communication allows users to technologically modularize machines and systems on a process-specific basis and benefit accordingly: Systems are easier to standardize and easier to reuse or extend. Response to customer demands is faster and more flexible and startup is simplified and speeded up by pretesting at component level.

### Function (continued)

#### System-wide openness

Thanks to openness across the HMI, CNC and PLC, users can apply their specific expertise such that they achieve exactly the individual control solution desired. SINUMERIK 840D sl offers to the supplier openness right down to the NCK level. This open architecture and the high computing performance of SINUMERIK 840D sl mean that CNC functions can be adapted to many different innovative machine kinematics flexibly, rapidly and cost-effectively. Additional technology-specific functions can be subsequently loaded as compile cycles.

#### Integrated safety functions

Integrated safety functions SINUMERIK Safety Integrated are available with SINUMERIK 840D sl. The safety functions comply with the requirements of Category 3 as well as Performance Level PL d according to DIN EN ISO 13849-1 and Safety Integrity Level SIL 2 according to DIN EN 61508. As a result, highly effective protection for personnel and machinery can be implemented simply, cost-effectively and practically.

### Integration

The following components can be connected to SINUMERIK 840D sl:

- SINUMERIK operator panel front with TCU, PCU 50.5, machine control panel, machine Push Button Panel
- SIMATIC CE panel, SIMATIC Thin Client Panels
- SINUMERIK handheld units
- Distributed PLC I/O via PROFIBUS DP or PROFINET IO
- SINUMERIK I/O module PP 72/48D PN
- SINUMERIK Analog Drive Interface for 4 axes ADI 4
- SINAMICS S120/SINAMICS S120 Combi drive system
- SIMOTICS feed and main spindle motors
- Probe systems  
(The use of high-precision probes such as those from Renishaw's Rengage range is recommended.)

### Overview

#### NCU 710.3 PN

The NCU 710.3 PN represents the first configuration level of the SINUMERIK 840D sl. Up to 8 axes are available in up to 4 machining channels which can be executed in up to 4 mode groups. Up to 8 axes/spindles are supported per channel. Interpolation is possible for a maximum of 8 axes with the CNC software for NCU (multi-axis interpolation option).

The basic version of the CNC user memory is 3 MB, and can be optionally expanded up to 9 MB.

#### NCU 720.3 PN

The NCU 720.3 PN represents the medium configuration level of the SINUMERIK 840D sl. Up to 31 axes are available in up to 10 machining channels which can be executed in up to 10 mode groups. Up to 20 axes/spindles are supported per channel. Interpolation is possible for a maximum of 20 axes with the CNC software for NCU (multi-axis interpolation option).

The basic version of the CNC user memory is 3 MB, and can be optionally expanded up to 15 MB.

#### NCU 730.3 PN

The NCU 730.3 PN is the flagship of the SINUMERIK 840D sl, representing the highest configuration level within the SINUMERIK 840D sl Type 1B.

Up to 31 axes are available in up to 10 machining channels which can be executed in up to 10 mode groups. Up to 20 axes/spindles are supported per channel. Interpolation is possible for a maximum of 20 axes with the CNC software for NCU (multi-axis interpolation option).

The basic version of the CNC user memory is 3 MB, and can be optionally expanded up to 15 MB.

# SINUMERIK CNC

## SINUMERIK 840D sl Type 1B

### Numeric Control Extensions NX10.3/NX15.3

#### Overview

The NX10.3/NX15.3 Numeric Control Extensions are used with SINUMERIK 840D sl for applications with large numbers of axes. NX10.3/NX15.3 allows the drive-end computing performance for the SINAMICS drives within the SINUMERIK 840D sl to be increased.

The modules have the same design as the SINAMICS S120 components. With a width of only 25 mm (1 in), the modules are also ideal for installation in compact machines.

#### Function

The drive control is expanded modularly in steps of 3 or 6 additional servo axes by means of Numeric Control Extensions. Each NX10.3/NX15.3 component can control up to 3 additional servo axes and each NX15.3 component can control up to 6 additional servo axes.

The SINUMERIK 840D sl control handles coordinate transformation, motion control and PLC control for up to 31 axes, whereby the drive control for up to 6 servo axes is already integrated into the SINUMERIK 840D sl.

Data management for the NX10.3/NX15.3 components is located exclusively on the SINUMERIK 840D sl, making it much easier to replace components.

#### Integration

The following can be operated in an axis grouping with SINUMERIK 840D sl:

- Up to 2 NX10.3/NX15.3 components on the NCU 710.3 PN
- Up to 5 NX10.3/NX15.3 components on the NCU 720.3 PN/NCU 730.3 PN

The NX10.3/NX15.3 components are connected to the SINUMERIK 840D sl via DRIVE-CLiQ cables. This ensures that drive control remains high performant and clock synchronized. The communications interfaces on the SINUMERIK 840D sl remain available for other connections.

#### Technical specifications

## SINUMERIK 840D sl Type 1B

### SINUMERIK COM01.3 module

#### Overview

With the SINUMERIK COM01.3 module an RS232C serial interface is available for the NCU 710.3 PN/NCU 720.3 PN/NCU 730.3 PN. The COM interface has been designed in accordance with the ANSI/EIA/TIA-232-F-1997 standard.

#### Function

The NCU 710.3 PN/NCU 720.3 PN/NCU 730.3 PN can be connected to a master computer, a PC/PG or a modem via the COM interface. A DNC link via the COM interface is also possible in addition to data input and output.

#### Integration

The SINUMERIK COM01.3 module can be used for the SINUMERIK 840D sl:

- NCU 710.3 PN/NCU 720.3 PN/NCU 730.3 PN with CNC software version 4.4 SP1 or higher

The COM01.3 module is inserted in the option slot of the NCUs.

## SINUMERIK 840D sl Type 1B

### CBE30-2 communication module

2

#### Overview

The CBE30-2 communication module for NCU-Link can be used to set up NCU link communication between a number of NCU 710.3 PN/ NCU 720.3 PN/NCU 730.3 PN (Control Units) on the basis of the generally approved standard configuration.

#### Benefits

- Using the CBE30-2 communication module, it is possible to implement machines with more than 31 axes via NCU-Link
- Direct linking in the interpolation cycle means that NCUs can exchange data quickly
- Subordination of a physical axis to several different NCUs
- Cross-NCU interpolation
- An increase in the number of usable axes for an NCU grouping
- An increase in the number of channels for an NCU grouping

#### Design

- 100 Mbit/s full-duplex/autocrossing
- Integrated 4-port switch with four RJ45 sockets based on PROFINET
- Hardwiring for NCU-Link via port 1 (in) and port 2 (out)

#### Function

To support isochronous Ethernet communication for linking up to three NCUs (NCU-Link).

#### Technical specifications

## SINUMERIK I/O

### SINUMERIK Analog Drive Interface for 4 axes ADI 4

#### Overview

The SINUMERIK ADI 4 Analog Drive Interface module for 4 axes can be used to operate up to 4 drives with analog setpoint interface.

#### Benefits

- Connection via PROFIBUS DP
- Motion control functionality (isochronous)

#### Design

- 4 inputs for incremental encoders (TTL signals) or optionally 4 inputs for absolute encoders (SSI interface)
- 4 analog outputs  $\pm 10$  V for the setpoint
- 4 relay contacts for drive enable of axes 1 to 4
- 10 digital outputs (4 general, 6 drive-specific)
- 10 digital drive-specific inputs
- Onboard status display via 4 diagnostics LEDs

To supply the module and digital outputs with power, an external voltage source (+24 V DC) is needed.

#### Integration

The ADI 4 Analog Drive Interface can be used for the SINUMERIK 840D sl control

Several ADI 4 Drive Interfaces can be connected to the SINUMERIK 840D sl, permitting analog control of all its axes. Mixed operation of digital drives and ADI 4 modules is possible, the axes can interpolate with one another.

##### Encoder connection:

- TTL incremental encoder with differential transfer
  - Track A and inverted signal A
  - Track B and inverted signal B
  - Zero signal and inverted zero signal
  - Output frequency max. 1.5 MHz
  - Phase shift of Track A to Track B:  $90^\circ \pm 30^\circ$
  - Power consumption max. 300 mA
- Absolute encoder with SSI signal
  - True and inverted output signal
  - Shift clock as true and inverted signal
  - Transmission frequency max. 750 kBaud
  - Power consumption max. 300 mA
  - Only multi-turn encoders are approved for this purpose
- Linear encoder with distance-coded zero marks/reference marks
  - LS 476 C
  - LS 186 C with external pulse-shaper electronics EXE
- Encoder with sin/cos signals can be connected via external pulse-shaper electronics EXE.

#### Integration (continued)

Connection overview for ADI 4

More information about cables can be found under MOTION-CONNECT connection systems.

## SINUMERIK I/O

### SINUMERIK PP 72/48D PN I/O module

#### Overview

The PP 72/48D PN I/O module is available in a digital variant with 72 inputs and 48 outputs and in a digital/analog variant PP 72/48D 2/2A PN with an additional 2 analog inputs and 2 analog outputs.

The I/O modules are connected to the CNC via a PROFINET-based I/O interface. The digital inputs and outputs are connected by means of three 50-pin ribbon cables. Terminal strip converters can be used or the direct connection of distribution boards, for example, is possible.

#### Benefits

- Simple connection via a PROFINET-based I/O interface
- Mounting plate for simple module installation in the control cabinet
- Automatic module detection by the CNC, no complex configuring required
- Simple connection of terminal strip converters to plug connectors
- Integrated 24 V DC power supply with electrical isolation between the inputs and outputs and PROFINET

#### Integration

The PP 72/48D PN and PP 72/48D 2/2A PN I/O modules can be used for the SINUMERIK 840D sl CNC.

## SIMATIC I/O

### SIMATIC ET 200 distributed I/O

#### Overview

2

#### **SIMATIC ET 200 – offers the right solution for every application**

SIMATIC ET 200 offers a broad range of distributed I/O systems – for solutions in the control cabinet or without a control cabinet directly at the machine and for applications in hazardous areas. Thanks to their modular design, ET 200 systems are easy to scale and expand in small steps. Ready integrated add-on modules reduce costs while at the same time offering extremely diverse application potential. A huge range of different combinations can be selected: Digital and analog inputs/outputs, intelligent modules with CPU functionality, safety systems, motor starters, pneumatic systems, frequency converters and a variety of technology modules (e.g. for counting and positioning tasks).

The communication via PROFIBUS and PROFINET, the uniform engineering, the user-friendly diagnostic tools and the optimum interfacing with SIMATIC controllers and HMI equipment are all proof of the unique consistency of the Totally Integrated Automation.

#### **PROFIBUS**

PROFIBUS is the international standard (IEC 61158/61784) for the field level. It is the only fieldbus to allow communication both in manufacturing applications and in process-oriented applications.

PROFIBUS is used to connect field devices such as distributed I/O devices or drives, to automation systems such as SIMATIC S7, SIMOTION, SINUMERIK or PCs.

PROFIBUS is standardized in accordance with IEC 61158 and is a powerful, open and rugged fieldbus system with short response times. PROFIBUS is available in different forms for various applications.

#### **PROFIBUS DP (distributed I/O)**

PROFIBUS DP is used for connecting distributed field devices, e.g. SIMATIC ET 200 or drives with extremely fast response times. PROFIBUS DP is used when sensors/actuators are distributed at the machine or in the plant (e.g. field level).

#### **PROFINET**

PROFINET is the open, cross-vendor Industrial Ethernet standard (IEC 61158/61784) for automation.

Based on Industrial Ethernet, PROFINET enables direct communication between field devices (IO devices) and controllers (IO controllers), up to and including the solution of isochronous drive controls for motion control applications.

As PROFINET is based on Standard Ethernet according to IEEE 802.3, any devices from the field level to the management level can be connected.

In this way, PROFINET enables system-wide communication, supports plant-wide engineering and applies IT standards, such as Webserver or FTP, right down to field level. Tried and tested fieldbus systems, such as PROFIBUS or AS-Interface, can be easily integrated without any modification to the existing devices.

## Supplementary components

### SITOP power supply Stabilized power supply units

#### Overview

##### Stabilized power supply units

The 24 V power supply from the SITOP range are optimized for industrial use and operate on the switched-mode principle. Due to the precisely regulated output voltage, the devices are even suitable for the connection of sensitive sensors. Different versions are available depending on the output current and field of application. In some cases, functional expansion is possible with add-on modules. For example, for back-up in the event of long supply system outages, DC UPS modules 6 A, 15 A and 40 A are available with external back-up by rechargeable batteries and maintenance-free SITOP UPS500 with capacitor technology. 48 V power supplies have been added to the SITOP product range.

The SITOP PSU400M power supply unit with 600 V DC input is suitable for use on frequency converters as an efficient DC/DC converter.

It converts the DC link voltage to a stabilized 24 V DC thus allowing, for example, specific emergency retraction movements to be performed in the event of a mains failure. This is possible because the control system and the drive electronics continue to receive a power supply for as long as there is sufficient energy stored in the DC link.

The wide DC input range (200 V to 900 V DC) and the high efficiency level of up to 96 % ensure efficient use of the DC link energy. The compact, rail-mounted device is versatile in its application thanks to its high overload capability with 50 % extra power for 5 s/min, its comprehensive range of functions and its rugged construction. The selectable ON delay which ensures that the converter's DC link is not loaded immediately during starting is one of the features that makes it ideal for operation on SINAMICS frequency converters.

#### Benefits

- High level of efficiency  
The efficiency of up to 96 % keeps the current consumption low and the control cabinet cool.
- Easy installation  
The low weight and mounting accessories support fast and therefore low-cost installation.
- Low space requirements  
The high power ratio means that the devices only require minimal space in the control cabinet and in the machines.
- Accurate output voltage  
The output voltage of 24 V DC remains accurate even under conditions of extreme voltage variation. The loads are protected from overvoltage spikes which lengthens the lifetime and reduces downtimes.
- Low residual ripple  
The low residual ripple of < 0.4 % supports voltage-sensitive loads.
- Integrated short-circuit protection  
No additional protection of the cables in the 24 V DC circuit is required.
- Safety isolation  
The UA output is electrically isolated from the input (output voltage SELV acc. to EN 60950). Dangerous voltages cannot arise due to electrical isolation at the output.
- Meets the requirements of national and international standards, e.g.:
- CE marking in accordance with 89/336 EEC und 73/23 EEC
- UL/cUL (CSA) approval
- FM approval (Factory Mutual)
- Marine approval
- No release of silicon

# SINUMERIK CNC

## SINUMERIK Safety Integrated

2

### Overview

SINUMERIK Safety Integrated provides integrated safety functions that support the implementation of highly effective personnel and machine protection. The safety functions comply with the requirements of Category 3 as well as Performance Level PL d according to DIN EN ISO 13849-1 and Safety Integrity Level SIL 2 according to DIN EN 61508. Consequently, important functional safety requirements can be implemented easily and economically. The range of functions includes, for example:

- Functions for safety monitoring of velocity and standstill
- Functions for establishing safe boundaries in work spaces and protected spaces, and for range recognition
- Direct connection of all safety-related signals and their internal logical linkage

### Benefits

- High level of safety:  
Complete implementation of the safety functions in Category 3/SIL 2/PL d
- High level of flexibility:  
Supports the implementation of practically sound safety and operating concepts
- Extremely cost-effective:  
Reduced hardware and installation costs
- Enhanced availability:  
Absence of interference-susceptible electromechanical switching elements

### Function

The safety functions are available in all modes and can communicate with the process using safety-related input/output signals.

They can be implemented for each individual axis and spindle:

#### **Safety Integrated (system-integrated, option)**

- Safe shutdown  
Ensures safe transition of the drive from motion to rest when a monitoring device or a sensor (e.g. a light barrier) is triggered.
- Safe braking ramp (SBR)  
Monitoring of the speed curve. The speed must be reduced after a stop request has been issued
- Safe operating stop (SBH)  
Monitors drives for standstill. The drives remain fully functional in position control
- Safe standstill (SH)  
Suppression of drive pulses, providing safe electronic interruption of the power supply
- Safely limited speed (SLS)  
Monitoring of configurable speed limits
- Safety-related output  $n < n_x$   
Safe speed recognition of a drive
- Safe software limit switch (SE)  
Variable travel limitations
- Safe software cams (SN)  
Range recognition
- Safety-related input/output signals (SGE/SGA)  
Interface with process
- Safe programmable logic (SPL)  
Direct connection of all safety-related signals and their internal logical linkage
- Safe brake management (SBM)  
- 2-channel braking signal (integrated in the Motor Module) (SBC)  
- Cyclic brake test (SBT)
- Safety-related communication via standard bus  
- Connection of distributed I/O for process and safety signals via PROFIBUS/PROFINET using the PROFIsafe protocol  
- Safety-related CPU – CPU communication via PROFIBUS or PROFINET
- Integrated acceptance test  
Partially automated acceptance test for all safety-relevant functions. Simple operation of the test process, automatic configuration of Trace functions and automatic generation of an acceptance record

#### **Safety Integrated (drive-based, basic version)**

- Safe Torque Off (STO)  
Suppression of drive pulses, providing safe electronic interruption of the power supply
- Safe Brake Control (SBC)  
Safe (two-channel) control of a holding brake (integrated in the Motor Module)
- Safe Stop 1 (SS1)  
Safe stopping of the drive followed by STO

### Integration

Preconditions:

- SINUMERIK 840D sl
- SINAMICS S120 booksize format
- The encoder systems used must meet the requirements of SINUMERIK Safety Integrated.
- The measuring circuit cables must comply with the SINAMICS S120 specification.
- Sensor/actuator integration with PROFIsafe I/Os
- Fail-safe modules
  - SIMATIC ET 200M
  - SIMATIC ET 200S
  - SIMATIC ET 200eco
  - SIMATIC ET 200pro
  - DP/AS-i F-Link
- SIMATIC S7 F Configuration Pack available as a download at: <http://support.automation.siemens.com/WW/view/de/15208817?Datakey=25536344>
- For the integrated acceptance test
  - SinuCom NC software tool (can run on PC/PG)

### Selection and ordering data

| Description                                                                                                                     | Order No.                 |
|---------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>SINUMERIK Safety Integrated for SINUMERIK 840D sl</b>                                                                        |                           |
| • SINUMERIK SI Basic (incl. 1 axis/spindle; up to 4 inputs and up to 4 outputs can be used for safe programmable logic)         | <b>6FC5800-0AM63-0YB0</b> |
| • SINUMERIK SI Comfort (including 1 axis/spindle; up to 64 inputs and up to 64 outputs can be used for safe programmable logic) | <b>6FC5800-0AM64-0YB0</b> |
| • SINUMERIK SI axis/spindle package (extra for each additional axis/spindle)                                                    | <b>6FC5800-0AC70-0YB0</b> |
| • SINUMERIK SI axis/spindle package (further additional 15 axes/spindles)                                                       | <b>6FC5800-0AC60-0YB0</b> |

Only one SI Basic and one SI Comfort option can be ordered for each SINUMERIK 840D sl NCU. If a machine with Safety Integrated requires up to 4 safe inputs and 4 safe outputs, the SI Basic option can be ordered. If 5 or more safe inputs/outputs are required, the SI Comfort option should be ordered.

#### Ordering example 1:

The machine has 2 axes and 1 spindle, which are to be monitored by Safety Integrated. 4 safe inputs and 3 safe outputs are required. The following options must be ordered:

| Quantity | Order item         | Note            |
|----------|--------------------|-----------------|
| 1        | 6FC5800-0AM63-0YB0 | SI Basic        |
| 2        | 6FC5800-0AC70-0YB0 | SI axis/spindle |

#### Ordering example 2:

The machine has 5 axes and one spindle, which are to be monitored by Safety Integrated. 9 safe inputs and 5 safe outputs are required. The following options must be ordered:

| Quantity | Order item         | Note            |
|----------|--------------------|-----------------|
| 1        | 6FC5800-0AM64-0YB0 | SI Comfort      |
| 5        | 6FC5800-0AC70-0YB0 | SI axis/spindle |

### More information

The Safety Integrated functions of the SINUMERIK are generally certified by independent institutes. An up-to-date list of certified components is available on request from your local Siemens office. If you have any questions relating to certifications that have not been completed, please ask your Siemens contact.

#### Encoder systems

If you require information about the use of suitable encoder systems with SINUMERIK Safety Integrated, please contact your local Siemens office.

# SINUMERIK CNC

## Tools

### SIMATIC STEP 7 for SINUMERIK

#### Overview

The SIMATIC STEP 7 software for service functions can be used to read status and service displays of the CPU via the PLC program without the need for an additional programming device, and to integrate new modules.

The software is designed for service functions. The conditions of the SINUMERIK supply contract apply.

Existing service packs for SIMATIC STEP 7 are released separately for STEP 7 on SINUMERIK PCU.

#### Integration

SIMATIC STEP 7 V5.5 SP1 can be used on the SINUMERIK PCU 50.5.

Preconditions:

- Mouse and PC keyboard
- SINUMERIK PCU 50.5 with PCU-Basesoftware, version 1.2 or higher

### SinuCom

#### Overview

The SinuCom program package consists of:

- SinuCom NC
  - SinuCom NCTrace
  - SinuCom NC SI
- SinuCom FFS
- SinuCom CFS
- SinuCom ARC
- Commissioning software for SINAMICS S120/ SIMODRIVE 611 digital

The SinuCom program package supports simple and effective commissioning of control systems. The programs provide comprehensive support to commissioning and service personnel of machine manufacturers for the following:

- Commissioning of the machine including utilization of the trace functionality, for the Safety Integrated acceptance test
- Creation of CF Card images
- Administration of data for series start-up
- Transmission of CNC user data
- Know-how protection – guard technological knowledge against unauthorized access

#### Function

##### SinuCom NC

The SinuCom NC program facilitates commissioning of control systems by providing:

- Dialog-based parameterization of machine data
- Administration of data for series start-up
- Integrated online help for functions, machine data and alarms
- Functional description in German and English as PDF (part of the online Help)

##### SinuCom Trace

The SinuCom NC Trace function permits the dynamic recording of CNC, PLC and HMI variables and of drive signals that are available via the CNC. These variables can be displayed, printed out or stored in a file, similar to using an oscilloscope or logic analyzer. The SinuCom NC Trace function helps with:

- Fault detection and fault correction
- Machine performance analysis, benchmarking and tuning
- Process performance analysis, benchmarking and tuning

<sup>1)</sup> Example of specific software version, e.g., 5.5: 6FC5252-5....-5...

### Function (continued)

#### Preconditions:

- HMI-Advanced, version 6.3.15 or higher (variables of the CNC, PLC, HMI and drive)
- HMI-Advanced, software version 7.1 or higher
- Mouse

#### SinuCom NC SI

The SinuCom NC SI function supports the machine manufacturer in automating the Safety Integrated acceptance test, and optimizes the process:

- Verification of machines according to the EC Machinery Directive
- Testing of safety functions (partly automated) during the machine acceptance
- Logging of measured data and test results incl. trace functions records
- Testing of single/special-purpose machines, machine components (as a partial test) and series machines as a series commissioning process
- Faster commissioning because, in the new acceptance mode, power-on alarms during the acceptance test are acknowledged by RESET
- Simple operator control using prompted sequences
- Automatic configuration of the trace functions
- Unambiguous quality verification for equipment manufacturers and final customers, and for dealings with government agencies

#### Preconditions:

- HMI-Advanced, software version 6.3.15 or higher
- HMI-Advanced, software version 7.1 or higher
- Mouse

#### SinuCom CFS

The SinuCom CFS program can be used to generate an image in Ext3 format for the CF card of the NCU of the SINUMERIK 840D sl. It contains:

- Preparing the image for programming the CF card
- Integrated help

#### Preconditions:

- SINUMERIK 840D sl

When copying the software, make sure that you comply with the I DT software marketing guidelines.

#### SinuCom ARC

The SinuCom ARC program simplifies the processing of series startup data:

- Reading, deleting, inserting and changing of data for series startup
- Integrated help

#### Commissioning software for SINAMICS S120/SIMODRIVE 611 digital

The commissioning software for PC/PG permits optimized commissioning of drives with SINAMICS S120/SIMODRIVE 611 digital if no HMI-Advanced operating software is available.

### Integration

# SINUMERIK Operate

The user interface for efficient machine operation

## Overview

DIN & SINUMERIK  
High-level language &  
programGUIDE

Developed to  
provide maximum flexibility  
and very short  
machining times

ShopMill/ShopTurn  
Machining step  
programming

Developed to  
speed up  
programming

programSYNC

Developed to  
boost the productivity  
of multi-channel  
machines

The SINUMERIK Operate user and programming interface is clearly structured to promote intuitive use and combines all the functions needed to operate and program a CNC machine. It provides a consistent look and feel and offers you the same usability for every technology – even when switching between different technologies, such as multi-tasking machines.

# SINUMERIK Operate

## The user interface for efficient machine operation

### Overview (continued)

#### *Programming has never been so easy*

The SINUMERIK Operate user interface offers many new, high-performance functions. This means that machining step and high-level language programming can be combined under a single system user interface, allowing for very fast, rational and intuitive NC programming and work preparation.

#### *Fast and flexible*

G code programming functions with cycle support have been combined in programGUIDE. ProgramGUIDE ensures maximum flexibility and short machining times and is ideal for applications with medium to large batch sizes. SINUMERIK also supports ISO code programming. The ShopMill and ShopTurn machining step programming systems are tailored to the production of single parts and small batch sizes, in other words, they are ideal for shop floor manufacturing.

#### *Support for manufacturing technologies*

Cost-effective production methods and innovative CNC solutions are required to produce complex workpieces. The SINUMERIK 840D sl CNC supports multi-technology machines for machining workpieces in a single clamping process and offers innovative functions for this purpose – even where the operation requires switchover between different technologies such as mill-turning and turn-milling. The innovative SINUMERIK Operate user interface provides integrated turning functions for milling applications and integrated milling functions for turning applications, augmented with innovative measuring cycles in the Animated Element design. The usability and look and feel of the interface are always identical with every application.

### Selection and ordering data

| Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Order No.                                                                                                          |

# SINUMERIK Operate

## Operation and programming

### CAD Reader

#### Overview

The CAD Reader program converts DXF files into contours or hole drilling templates.

#### Function

- Import of DXF files
- Suppression of image layers
- Automatic contouring
- Any workpiece zero per extracted contour/drilling pattern

SINUMERIK 840D sl with SINUMERIK Operate:

- Generation of contours (straight lines, circles) for SINUMERIK Operate

SINUMERIK 840D sl with SW 1.x:

- Conversion into contours or drilling patterns for ShopMill, ShopTurn, HMI-Advanced or HMI-Embedded
- Display of extracted contours/drilling patterns in the geometric processor/cycle support

#### Integration

The CAD Reader program can be used for:

- SINUMERIK 840D sl

Preconditions:

- Windows 95/98/Me/NT 4.0/2000/XP/7 operating system
- Mouse

### Overview

TRANSLINE HMI sl is the machine user interface for operator control and monitoring tasks in mass production, for example in transfer lines, processing centers, and assembly lines. TRANSLINE HMI standardizes the operation of machines with diverse tasks and technologies by means of operating screen forms and a parameterizable navigation menu.

The technology-specific operating screen forms are combined into function groups, e.g.:

- Machine functions  
Workpiece counting, cycle times, workpiece overview
- Help texts
- Overviews
- Tool changing functions
- Manual operator functions

Prepared diagnostics functions support rapid localization in the event of a machine fault.

### Function

Diverse target hardware is supported to ensure the best possible price/performance ratio for different applications.

The standard application is easy to adapt or expand and is therefore ideally suited for implementing customized versions for project-specific use.

#### HMI PRO sl

With the configuration software that is executable on PGs/PCs, the screen forms for HMI PRO sl RT can be parameterized, configured, and loaded into the target hardware.

Two diagnostics functions are available for the process error diagnostics integrated into HMI PRO sl RT. Process error diagnostics are used in combination with S7-PDIAG and S7-GRAPH.

Users can freely configure their own operator screen forms using the simple, integrated graphic editor.

#### HMI Lite

HMI Lite contains a sample project that can be expanded with machine-specific or project-specific screen forms by using WinCC flexible. A diagnostics function is available for the optional ProAgent process error diagnostics. It can be used in combination with S7-PDIAG and S7-GRAPH.

HMI Lite can be expanded with interactive screen forms that access SINUMERIK data provided that the SINUMERIK Single License is available for each operator panel.

### Integration

HMI PRO sl RT can run on SINUMERIK 840D sl NCU and SINUMERIK PCU 50.5. HMI Lite is available for the Windows CE-based SIMATIC Panels MP277 (10"), OP/TP 277 (6") and OP/TP 177B.

SINUMERIK OP 019

SINUMERIK  
PCU 50.5

SINUMERIK TCU

#### SINUMERIK operator panel fronts with PCU/TCU

The SINUMERIK operator panel fronts (OP) and touch operator panels (TP) can be combined with SINUMERIK PCUs (industrial PCs) or SINUMERIK Thin Client Units (TCU) and contain numerous innovations to improve ease of operation.

The USB interface on the panel front provides hot Plug&Play functionality for a standard PC keyboard, mouse and/or USB FlashDrive. The SINUMERIK operator panel fronts are available with displays in a variety of sizes, and with membrane or mechanical keyboards.

With these elements, the SINUMERIK operator panel fronts can be tailored to suit individual user requirements.

#### SINUMERIK PCU

Innovative operator panels can be created with the SINUMERIK PCU and the SINUMERIK operator panel fronts. The SINUMERIK PCU is mounted on the rear of the SINUMERIK operator panel front, or can be positioned at distances up to 100 m (328 ft) from the operator panel in the cabinet.

The powerful SINUMERIK PCU features numerous innovations. The communication interfaces via Ethernet and PROFIBUS DP are already on board.

The complementary proven operator control components, such as handheld units, machine control panels, Push Button Panels, electronic handwheels, keyboards, and card readers can be used with the SINUMERIK PCUs/TCUs.

#### SINUMERIK TCU

The SINUMERIK Thin Client Unit (TCU) allows operator panel fronts and SINUMERIK PCUs/NCUs to be installed separately. For this reason, the user interface is copied to one or several operator panel fronts, each with a SINUMERIK TCU.

#### Operator panels

An operator panel comprises a SINUMERIK PCU (large-scale integrated industrial PC) and a SINUMERIK operator panel front, which is available with various performance levels and display sizes.

The displays comply with the quality standards relating to the pixel error class defined by ISO standard 13406-2, class 2.

#### Benefits

- Intelligent, rugged operator panels that have an impressively slimline, compact design
- Individual design of your user interface, using your expertise by means of openness in human-machine communication
- Distributed design with physical separation of PCU and operator panel front

#### Application

The operator panels are predominantly used for visualization and for the operation of machine tools. They are particularly suitable for milling, turning, grinding and special-purpose machines.

For further information about applications, refer to [SINUMERIK CNC → Functions → Operation](#).

Handheld unit type B-MPI

The SINUMERIK handheld units are available with a variety of performance options. Ergonomic handheld units are available which can be used as mobile machine control panels or as an additional main operator panel.

#### Benefits

- Ergonomic machine control thanks to carefully designed housing
- Setup and operation of simple machines with the mini handheld unit, especially as part of JobShop or similar applications
- Setup, operation, teaching and programming of user programs with the multifunctional handheld terminals

#### Machine control panels

Machine control panels, Push Button Panels and handwheels are available for the user-friendly operation of the machine functions of SINUMERIK and PLC-controlled machines.

#### Benefits

- Ergonomic machine control thanks to well-conceived design
- Machine-specific adaptations by means of variable labeling and additional integration of control devices

#### Keyboards

The keyboards enable easy user input of programs and texts.

#### Benefits

- Ergonomic keyboard
- CNC-specific supplements

#### Storage devices

Storage devices are used for archiving user data.

#### Housing systems

Housing systems can be manufactured to precise dimensions and ready to install for numerous combinations of SINUMERIK operator components.

#### Benefits

Optimized configuration options for SINUMERIK CNCs with:

- Operator panel
- Full CNC keyboard
- Machine control panel
- Machine Push Button Panel

# SINUMERIK Operate

## Operator panels

### SINUMERIK OP 08T

#### Overview

The extremely compact SINUMERIK OP 08T operator panel front supports the distributed installation of the operator panel front and control. The SINUMERIK OP 08T operator panel front contains a membrane keyboard with 65 keys (layout as SINUMERIK KB 310C full CNC keyboard), as well as 2 × (8 + 2) horizontal and 2 × 8 vertical softkeys.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- Design of compact operator panels through shallow installation depth/reduced size and low power dissipation.
- Vibration-free mounting of the SINUMERIK PCU in the control cabinet
- Efficient operation of larger machines using up to 4 additional, distributed operator panels simultaneously

#### Design

The SINUMERIK OP 08T operator panel front is connected to the PCU/NCU via Ethernet as a Thin Client in its own subnet (via DHCP server to PCU/NCU).

Ports:

- 2 × USB 1.1
- Ethernet 10/100 Mbit/s

#### Function

- Signal transmission between operator panel front and PCU/NCU via Industrial Ethernet
- Easy installation
- Mixed operation with one operator panel front directly on the PCU is possible. Operator inputs on a SINUMERIK OP 08T have equal priority with operator inputs on an operator panel front connected directly to the PCU. The operator panel in passive mode shows a darkened screen.
- The distance to the operator panel fronts is determined by the maximum distance between two network nodes/access points (100 m/328 ft).

#### Integration

The SINUMERIK OP 08T operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

The 2 × 8 vertical softkeys can be used as direct keys with SINUMERIK 840D sl.

### Overview

The SINUMERIK OP 010 operator panel front with 10.4" TFT color display with a resolution of 640 × 480 pixels (VGA) features a 62-key membrane keypad with 8 + 4 horizontal and 8 vertical softkeys that has been optimized for programming part programs.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

### Benefits

- Low-cost operator control and monitoring thanks to 10.4" display with optimized keyboard

### Integration

The SINUMERIK OP 010 operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

# SINUMERIK Operate

## Operator panels

### SINUMERIK OP 010S

#### Overview

The slimline SINUMERIK OP 010S operator panel front with 10.4" TFT color display with a resolution of 640 × 480 pixels (VGA) features 8 + 4 horizontal and 8 vertical mechanical softkeys.

The SINUMERIK full CNC keyboard is suitable as the input keyboard.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- Space-saving operator control and monitoring
- Ergonomic and reliable operation thanks to the SINUMERIK KB 310C full CNC keyboard

#### Integration

The SINUMERIK OP 010S operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

#### Overview

The SINUMERIK OP 010C operator panel front with 10.4" TFT color display and a resolution of 640 × 480 pixels (VGA) features a 65-key mechanical keypad with 8 + 4 horizontal and 8 vertical softkeys.

The 6 hotkeys are designed with replaceable key covers for machine-specific adaptation. The key covers can be freely inscribed using laser.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- Easy, reliable operator control and monitoring thanks to the integral keyboard with mechanical keys
- Fast selection of the main functions using the 6 integral hotkeys

#### Integration

The SINUMERIK OP 010C operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

# SINUMERIK Operate

## Operator panels

### SINUMERIK OP 012

#### Overview

The SINUMERIK OP 012 operator panel front with 12.1" TFT color display and a resolution of 800 × 600 pixels (SVGA) features a 59-key membrane keypad as well as 2 × (8 + 2) horizontal and 2 × 8 vertical softkeys. The integral mouse provides an additional method of machine control. The 2 × 8 vertical softkeys can be used as direct keys in the PLC.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- User-friendly operator control and monitoring thanks to 12.1" display
- Easy operation thanks to integral keyboard and mouse

#### Integration

The SINUMERIK OP 012 operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

If no SINUMERIK Machine Push Button Panel or machine control panel with connection of the direct keys is available, the optional SINUMERIK direct key module provides an additional connection of the 2 × 8 vertical softkeys as direct keys to PROFIBUS DP.

#### Technical specifications

### Overview

The SINUMERIK OP 015 operator panel front with 15" TFT color display and a resolution of 1024 × 768 pixels (XGA) features 8 + 4 horizontal and 8 vertical membrane softkeys.

The SINUMERIK KB 483C full CNC keyboard is suitable as the input keyboard.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

### Benefits

- Very user-friendly operator control and monitoring thanks to brilliant 15" display
- Ergonomic and reliable operation thanks to the optional SINUMERIK KB 483C full CNC keyboard

### Integration

The SINUMERIK OP 015 operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

# SINUMERIK Operate

## Operator panels

### SINUMERIK OP 015A

#### Overview

The SINUMERIK OP 015A operator panel front with 15" TFT color display with a resolution of 1024 × 768 pixels (XGA) features a 62-key membrane keyboard with 2 × (8 + 2) horizontal and 2 × 8 vertical softkeys and an integral mouse. The 2 × 8 vertical softkeys can be used as direct keys in the PLC.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- Very user-friendly operator control and monitoring thanks to 15" display
- Easy operation thanks to integral keyboard and mouse

#### Integration

The SINUMERIK OP 015A operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

If no SINUMERIK Machine Push Button Panel or machine control panel with connection of the direct keys is available, the optional SINUMERIK direct key module provides an additional connection of the 2 × 8 vertical softkeys as direct keys to PROFIBUS DP.

### Overview

The SINUMERIK OP 015AT operator panel front with 15" TFT color display and 1024 x 768 pixels (XGA) enables the distributed installation of the operator panel front and the controller. The SINUMERIK OP 015AT operator panel front contains a membrane keyboard with 62 keys as well as 2 x (8+2) horizontal and 2 x 8 vertical softkeys and an integral mouse.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

### Benefits

- Design of flat operator panels through shallow installation depth and low power dissipation
- Vibration-free mounting of the SINUMERIK PCU in the control cabinet
- Efficient operation of larger machines using up to 4 additional, distributed operator panels simultaneously

### Design

The SINUMERIK OP 015AT operator panel front is connected to the PCU/NCU via Ethernet as a Thin Client in its own subnet (via DHCP server to PCU/NCU).

Ports:

- 3 x USB 1.1 (2 x rear, 1 x front)
- Ethernet 10/100 Mbit/s

### Function

- Signal transmission between operator panel front and PCU/NCU via Industrial Ethernet
- Easy installation
- Mixed operation with one operator panel front directly on the PCU is possible. Operator inputs on a SINUMERIK OP 015AT have equal priority with operator inputs on an operator panel front connected directly to the PCU. The operator panel in passive mode shows a darkened screen.
- The distance to the operator panel fronts is determined by the maximum distance between two network nodes/access points (100 m/328 ft).

### Integration

The SINUMERIK OP 015AT operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

The 2 x 8 vertical softkeys can be used as direct keys with SINUMERIK 840D sl.

# SINUMERIK Operate

## Operator panels

### SINUMERIK OP 019

#### Overview

The SINUMERIK OP 019 operator panel front with 19" TFT color display and 1280 × 1024 pixels has a continuous glass front and capacitive keys with 2 × (8 + 2) horizontal and 2 × 8 vertical softkeys. The 2 × 8 vertical softkeys can be used as direct keys in the PLC.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- Clear operator control and monitoring thanks to the 19" display
- High-quality design and high degree of ruggedness
- Innovative capacitive sensor technology for user-friendly operation

#### Integration

The SINUMERIK operator panel front OP 019 can be used for:

- SINUMERIK 840D sl with PCU 50.5

For the USB 2.0 port at the front, there is a USB extension available for installation in control desks.

If no SINUMERIK Machine Push Button Panel or machine control panel with connection of the direct keys is available, or if the direct key commands cannot be transferred over the Thin Client, the optional SINUMERIK direct key module provides an additional connection of the 2 × 8 vertical softkeys as direct keys to the PROFIBUS DP.

### Overview

The SINUMERIK TP 015A operator panel front with 15" TFT color display and a resolution of 1024 × 768 pixels (XGA) and touch screen features a 62-key membrane keyboard as well as 2 × (8 + 2) horizontal and 2 × 8 vertical softkeys and an integral mouse. The 2 × 8 vertical softkeys can be used as direct keys in the PLC.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

### Benefits

- Very user-friendly operator control and monitoring thanks to 15" display
- Easy operation thanks to touch screen, integral keyboard and mouse

### Integration

The SINUMERIK TP 015A operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

If no SINUMERIK Machine Push Button Panel or machine control panel with connection of the direct keys is available, or if the direct key commands cannot be transferred over the Thin Client, the optional SINUMERIK direct key module provides an additional connection of the 2 × 8 vertical softkeys as direct keys to the PROFIBUS DP.

# SINUMERIK Operate

## Operator panels

### SINUMERIK TP 015AT

#### Overview

The SINUMERIK TP 015AT operator panel front with 15" TFT color display, 1024 × 768 pixels (XGA) and touch screen supports the distributed installation of the operator panel front and control. The SINUMERIK TP 015AT operator panel front contains a membrane keyboard with 62 keys as well as 2 × (8 + 2) horizontal and 2 × 8 vertical softkeys and an integral mouse.

The operator panel front is mounted from the rear using special clamping elements included in the scope of supply.

#### Benefits

- Flat operator panel through shallow installation depth
- Low power dissipation
- Easy installation
- Vibration-free mounting in the control cabinet
- Efficient operation of larger machines using up to 4 additional, distributed operator panels simultaneously

#### Design

The SINUMERIK TP 015AT operator panel front is connected to the PCU/NCU via Ethernet as a Thin Client in its own subnet (via DHCP server to PCU/NCU).

Ports:

- 3 × USB 1.1 (2 × rear, 1 × front)
- Ethernet 10/100 Mbit/s

#### Function

- Signal transmission between operator panel front and PCU/NCU via Industrial Ethernet
- Mixed operation with one operator panel front directly on the PCU is possible. Operator inputs on a SINUMERIK TP 015AT have equal priority with operator inputs on an operator panel front connected directly to the PCU. The operator panel in passive mode shows a darkened screen.
- The distance to the operator panel fronts is determined by the maximum distance between two network nodes/access points (100 m/328 ft).

#### Integration

The SINUMERIK TP 015AT operator panel front can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

The 2 × 8 vertical softkeys can be used as direct keys with SINUMERIK 840D sl.

#### Overview

The SINUMERIK direct key module makes it possible to perform machine operations with the two rows of keys (on the left and the right of the screen) from the SINUMERIK OP 012/OP 015A/OP 019/TP 015A operator panel fronts.

#### Design

The SINUMERIK direct key module is fitted alongside the SINUMERIK PCU 50 on the SINUMERIK operator panel fronts OP 012/OP 015A/OP 019/TP 015A. Cables and assembly material for installing the SINUMERIK PCU 50 with SINUMERIK OP 012 are included in the scope of delivery.

There is an extra installation kit for combining SINUMERIK PCU 50 with SINUMERIK OP 015A/OP 019 and TP 015A which must be additionally ordered when required.

#### Integration

The SINUMERIK direct key module is suitable for connection to:

- SINUMERIK PCU 50.5 with the SINUMERIK operator panel fronts OP 012/OP 015A/OP 019/TP 015A

The SINUMERIK direct key module is connected to PROFIBUS DP of the SINUMERIK operator panel front using a ribbon cable and PROFIBUS connectors.

# SINUMERIK Operate

## Panel Control Unit for operator panels

### SINUMERIK PCU 50.5

#### Overview

The powerful SINUMERIK PCU 50.5 Panel Control Unit provides maximum HMI performance and openness. It features all the onboard interfaces required to support communication via Ethernet and PROFIBUS (device-dependent), leaving the integrated slots free for other tasks.

The SINUMERIK PCU 50.5 is equipped with the Windows XP ProEmbSys operating system and with the Ghost data backup software for backing up and restoring data.

The operating software can be ordered separately.

The SINUMERIK Service Pack Recovery Media WIN XP ProEmbSys is available for the PCU with Windows XP ProEmbSys for reinstalling Windows software components and for restoring the delivery status.

#### Benefits

- Powerful and energy-efficient thanks to Intel Dual Core processor technology
- Reliable in operation through the use of error-correcting code RAM and solid-state drive as mass storage, as well as monitoring of temperature, SSD and fan
- Maximum processor performance up to 55 °C (131 °F) ambient temperature
- High shock and vibration resistance in all mounting positions
- Extremely compact design for space-saving installation thanks to compact housing design (6 liter volume)
- Service-friendly thanks to support of a USB boot device, for booting USB memory sticks, USB floppy drives or USB hard disks

#### Design

- Intel Dual Core processor technology
  - SINUMERIK PCU 50.5-C: Intel Celeron P4505 Dual Core/1.86 GHz/ 1 GB ECC RAM/2 MB Smart Cache
  - SINUMERIK PCU 50.5-P: Intel Core i5-520E Dual Core/2.4 GHz/ 2 GB ECC RAM/3 MB Smart Cache
- Replaceable 40 GB solid-state drive
- 12 GB for applications (SINUMERIK Operate, HMI-Advanced, MCIS software) and data (part programs, documentation, miscellaneous data)
- 15 GB for local backups and software to be installed
- Max. memory configuration 8 GB incl. graphics memory on 2 memory module slots (a maximum of 4 GB is usable with Windows XP.)
- Integral 2D/3D graphics; dynamic graphics memory (up to 256 MB); the graphics memory is taken from the main memory
- Windows XP ProEmbSys operating system
- Data backup/restore using the Ghost data backup software

#### Ports:

- 2 × Ethernet 10/100/1000 Mbit/s (RJ45)
- 4 × USB 2.0
- 1 × PROFIBUS/MPI interface (SINUMERIK PCU 50.5-C only)
- 1 × COM1 (RS232C)

#### Expansion slots:

- SINUMERIK PCU 50.5-C
  - 2 × PCI (1 × 185 mm/7.28 in)
- SINUMERIK PCU 50.5-P
  - 1 × PCI-Express ×16 (1 × 185 mm/7.28 in)
  - 1 × PCI (1 × 185 mm/7.28 in)

#### Integration

The SINUMERIK PCU 50.5 can be used for:

- SINUMERIK 840D sl (software version 7.6 or higher of HMI-Advanced operating software and SINUMERIK Operate software version 2.6 SP1)

# SINUMERIK Operate

## TCU for operator panels

### SINUMERIK TCU

#### Overview

The SINUMERIK Thin Client Unit TCU for distributed installation allows operator panel fronts and the SINUMERIK PCUs/NCUs to be installed separately. This is made possible by copying the user interface to one or several operator panel fronts, each with a SINUMERIK TCU.

#### Benefits

- Design of flat operator panels through the shallow installation depth and low power dissipation.
- Low-vibration installation of the PCU in the control cabinet
- Efficient operation of larger machines using up to 5 uniform operator panels simultaneously (of which 4 are Thin Clients)
- Effective operation of interlinked machines: more than 4 Thin Client operator panels can be connected thanks to TCU suppression mechanism

#### Design

The SINUMERIK TCUs are coupled via Industrial Ethernet as Thin Clients in a dedicated subnet via DHCP server on the PCU/NCU.

- Graphic: Resolution 640 × 480 to 1024 × 768, 16-bit color depth

Ports:

- 2 × USB 1.1 for connection of mouse and keyboard
- Industrial Ethernet 10/100 Mbit/s

#### Function

- Signal transmission between SINUMERIK PCU/SINUMERIK NCU and operator panel front via Industrial Ethernet
- Easy installation and service-friendly layout thanks to the component structure
- Functionality of the SINUMERIK PCU as in centralized configuration, e.g. number of PCI slots. The same operating screen is shown synchronously on all operator panel fronts and can be operated from all panel fronts. Operator inputs on a Thin Client have equal priority with operator inputs on an operator panel directly connected to the SINUMERIK PCU. The operator panel in passive mode shows a darkened screen.

#### Function (continued)

- Operation is possible on the active operator panel. An enabling function permits a passive operator panel to request operation.
- The combined operation of operator panel fronts on a SINUMERIK TCU or with an integral TCU and an operator panel front directly connected to the SINUMERIK PCU is possible.
- The distance to the operator panel fronts is determined by the maximum distance between two network nodes/access points (100 m/328 ft).

#### Integration

The SINUMERIK TCU can be used for:

- SINUMERIK 840D sl:  
OP 010, OP 010C, OP 010S, OP 012,  
OP 015, OP 015A, TP 015A operator panel fronts on  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

### Overview

The mobile SINUMERIK HT 2 handheld terminal is suitable for manually operating machine tools.

### Benefits

- Mobility for operator control and monitoring
- Two enabling buttons for right-handed or left-handed operators
- Easy hot swapping during operation (hot plug and play), without triggering the emergency stop in combination with the PN Plus connection box and without an additional, manual actuating element/key switch
- Rugged, light, and ergonomically designed
- Intuitive axis feed thanks to rugged, magnetic handwheel
- All keys can be freely configured and inscribed by the user (default key assignment preconfigured on shipped units)
- Slide-in labels for inscribing (accessory)
- Flexible mounting with different types of holders: Magnetic clamps or hooks (accessories)
- Easily replaceable signal cables, without special tools (accessories)

### Application

The SINUMERIK HT 2 is designed to allow manual operation of machine tools in any situation where the operator needs to be mobile, e.g. when setting up. It has been specifically developed with easy handling, ruggedness, and fitness for purpose in mind. The SINUMERIK HT 2 fits seamlessly into the operator component landscape of the SINUMERIK system.

### Design

The SINUMERIK HT 2 is connected via the PN Basic/PN Plus connection box when it is installed somewhere in the plant outside the control cabinet or via the PN Basic connection module when it is installed inside the control cabinet.

#### Control elements:

- 20 keys, all can be freely assigned and inscribed by the user
- Emergency stop button, 2-channel, three-step
- 2 enabling buttons (for right-handed and left-handed operators), 3-step, 2-channel
- Override rotary switch
- Magnetic handwheel
- Key switch (3 positions, 2 keys)

#### Key type:

- Membrane keys

#### Interfaces:

- Connecting cable to PN Basic/PN Plus connection box, PN Basic connection module

#### Display:

- 4-line display (128 × 64 pixels)

### Function

The easily accessible control elements, ergonomic design and light weight make this unit easy to use, even over long work shifts. Protection class IP65, rubber grips and magnetic hand-wheel make it suitable for use even when production conditions are rough. The key assignments match those on the previous B-MPI handheld unit model. This makes it easy to switch from one version to the next. The keys can be freely assigned and inscribed as required.

Hot swapping is available with the PN Plus connection box.

### Integration

The SINUMERIK HT 2 handheld terminal can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

[More information about cables can be found under MOTION-CONNECT connection systems.](#)

### Overview

The mobile SINUMERIK HT 8 handheld terminal combines the functions of an operator panel and a machine control panel in a single device, permitting complete operator control and monitoring of machines. It can be used as a supplementary main operator panel or as a secondary control panel.

The supplied touch pen with a holding loop permits easy operation of the touch screen, even when operators are wearing gloves. The safety system is designed to allow personnel to work in the machine's hazard zone.

### Benefits

- Mobility for operator control and monitoring
- Rugged, compact and ergonomically designed
- Operation via touch screen, membrane keys and touch pen
- Pixel-graphics 7.5" TFT color display
- Emergency stop button and 2 enabling buttons for left-handed and right-handed operators
- Easy hot swapping during operation (hot plug and play), without triggering the emergency stop in combination with the PN Plus connection box and without an additional, manual actuating element/key switch
- Connecting cable can be easily replaced without special tools

### Design

The emergency stop button and the 2 enabling buttons (3-step) each have two channels.

Possible connections for SINUMERIK HT 8:

- In the control cabinet via the Basic PN connection module
- At any preferred mounting location in the plant via the Basic or PN Plus connection box

### Function

The SINUMERIK HT 8 operates according to the Thin Client principle. The operator software is already installed on a SINUMERIK NCU/PCU. An Ethernet link is used to transfer screen contents from the NCU/PCU to the HT 8 and key information from the HT 8 to the NCU/PCU. The HT 8 display shows the same operator interface that is displayed on the standard operator panels of the SINUMERIK control system.

Hot swapping is available with the PN Plus connection box.

The operator interface can be customized if required (see SINUMERIK Integrate).

# SINUMERIK Operate

## Handheld units

### SINUMERIK HT 8

#### Integration

The SINUMERIK HT 8 handheld terminal can be used for:

- SINUMERIK 840D sl:  
NCU 7x0.3 PN  
SINUMERIK PCU 50.5

Connection overview for SINUMERIK HT 8

More information about cables can be found under MOTION-CONNECT connection systems.

### Overview

The convenient, ergonomically designed mini handheld unit with rugged metal connector is suitable for setting up and operating standard machines in the jobshop area.

### Benefits

- Mobile positioning of axes
- Since coarse, medium and fine infeed can easily be graduated, the operator control concept offers fast, increment-precise positioning
- Rugged and compact

### Design

- Emergency stop implemented in 2 channels with 4-wire connection
- The 2-channel, 3-step enabling button has a 3-wire connection.
- Rapid traverse key and two +/- keys
- A handwheel to traverse the axes in jog mode
- Facility to connect rotary switches for the selection of up to 5 axes
- Customer-specific applications can be implemented via 3 user-assignable function keys. If necessary, the customer can use slide-in labels to mark the keys specifically. Connection by means of a connection kit.
- Optional angle socket for a 90° rotated cable outlet direction (non-assembled use only in conjunction with the connection kit).
- Secured by means of integrated magnetic clamps or optional holder

### Integration

- The mini handheld unit can be used for:
- SINUMERIK 840D sl

# SINUMERIK Operate

## Handheld units

### Electronic handwheel

#### Overview

Handwheels are used for manually traversing axes.

#### Benefits

- Positioning of axes
- Rugged and compact (housing variant)

#### Design

- Handwheels for assembly by user. The front panel can be removed.
- Handwheels with housing and coiled cable, secured by means of the integrated magnetic clamps or the optional holder.

#### Function

- The handwheels are equipped with a magnetic latching mechanism that supports traversing with incremental accuracy.
- The handwheels generate either 5 V DC TTL or 24 V DC HTL signals. The version with 24 V DC and an HTL interface is available for connection to I/O modules.

# SINUMERIK Operate

## Handheld units

### Handwheel connection module PROFIBUS

#### Overview

The SINUMERIK handwheel connection module for PROFIBUS can be used to connect two handwheels or the handwheel of the handheld unit type B-MPI and the mini handheld unit.

On the SINUMERIK handwheel connection module for PROFIBUS, digital inputs, outputs, connections for the override rotary switch and the handwheels are all provided as well as a PROFIBUS DP interface for communication.

The SINUMERIK handwheel connection module for PROFIBUS is designed for control cabinet mounting.

#### Application

In addition to the handwheel connections of the handwheel connection module, further PLC inputs and outputs are required for connecting the handheld unit type B-MPI or the mini handheld unit. For this reason we recommend using external I/O modules such as SIMATIC for the required input signals.

#### Design

Interfaces for:

- PROFIBUS DP
- 6 inputs
- 6 inputs and 6 outputs, additional cable set required
- 16 direct keys of SINUMERIK OP 012/OP 015A/TP 015A/OP 019
- 2 handwheels

#### Integration

The SINUMERIK handwheel connection module for PROFIBUS can be used for:

- SINUMERIK 840D sl via PROFIBUS DP

#### Overview

The SINUMERIK MCP 310C PN machine control panel with mechanical keys is designed to permit user-friendly, well-structured operation of the machine functions. It is suitable for machine-level operation of milling, turning, grinding and special machines.

In addition to PROFINET functionality, SINUMERIK MCP 310C PN has also retained its complete Industrial Ethernet functionality. The network technology can be changed over using DIP switches.

All keys are designed with replaceable key covers for machine-specific adaptations. The key covers can be freely inscribed using laser. Transparent key covers can be used as an alternative.

The machine control panel is mounted from the rear using special clamps.

Included in the scope of delivery are the clamps, key caps (30 × ergo gray, 30 × clear, 9 × labeled) and a backing plate for the emergency stop.

#### Design

##### Control elements:

- Mode selectors and function keys
  - 49 keys with LEDs
  - Direction keys for milling machines with rapid traverse override (key covers for direction keys for turning machines are supplied in the accessories pack)
  - Default key assignment includes 16 freely assignable customer keys
- Feed control with feed/rapid traverse override (rotary switch with 23 positions)
- Key switch (4 positions and 3 different keys)

##### Key type:

- Mechanical keys

##### Interfaces:

- PROFINET/Industrial Ethernet
- 9 inputs/6 outputs for 9 control devices (additional cable set required for control devices)
- For 2 handwheels in conjunction with SINUMERIK 840D sl

##### Expansion facilities:

- 6 slots for control devices ( $d = 16 \text{ mm}/0.63 \text{ in}$ )
- 1 slot for emergency stop button or rotary override switch (up to  $d = 22 \text{ mm}/0.87 \text{ in}$ )

#### Integration

The SINUMERIK MCP 310C PN machine control panel can be used for:

- SINUMERIK 840D sl

#### Technical specifications

|                                                      |                                                                                                                                                                                                                                                                                                                         |

For Ethernet or PROFINET ordering data, see Industrial Ethernet Switches – SCALANCE.

<sup>1)</sup> 16G: Latching at position 16; T=24: 24 positions for 360°  
23G: Latching at position 23; T=32: 32 positions for 360°

<sup>2)</sup> For length code, see MOTION-CONNECT connection systems.

#### Overview

The SINUMERIK MCP 310 PN machine control panel with membrane keys is designed to permit user-friendly, well-structured operation of the machine functions. It is suitable for machine-level operation of milling, turning, grinding and special machines.

In addition to PROFINET, SINUMERIK MCP 310 PN has also retained its complete Industrial Ethernet functionality. The network technology can be changed over using DIP switches.

49 keys have user-inscribed slide-in strips for machine-specific adaptations. A DIN A4 sheet (for laser printers) for inscribing the slide-in labels is included in the scope of supply.

A connecting cable is included in the scope of supply for connecting the direct keys of the SINUMERIK operator panel fronts OP 012/OP 015A/OP 019/TP 015A.

The machine control panel is mounted from the rear using special clamps supplied with the panel.

#### Design

##### Control elements:

- Mode selectors and function keys
  - 49 keys with LEDs
  - Direction keys for milling machines with rapid traverse override
  - Default key assignment includes 16 freely assignable customer keys
- Feed control with feed/rapid traverse override (rotary switch with 23 positions)
- Key switch (4 positions and 3 different keys)

##### Key type:

- Membrane keys

##### Interfaces:

- PROFINET/Industrial Ethernet
- 9 inputs/6 outputs for 9 control devices (additional cable set required for control devices)
- For 16 direct keys of the OP 012/OP 015A/OP 019/TP 015A (connecting cable (850 mm/2.79 ft) included in scope of supply)
- For 2 handwheels

##### Expansion facilities:

- 6 slots for control devices ( $d = 16 \text{ mm}/0.63 \text{ in}$ )
- 1 slot for emergency stop button or rotary override switch (up to  $d = 22 \text{ mm}/0.87 \text{ in}$ )

#### Integration

The SINUMERIK MCP 310 PN machine control panel can be used for:

- SINUMERIK 840D sl

#### Technical specifications

|                                                         |                                                                                                                                                                                                                                                                                                                         |

For Ethernet or PROFINET ordering data, see Industrial Ethernet Switches – SCALANCE.

<sup>1)</sup> 16G: Latching at position 16; T=24: 24 positions for 360°  
23G: Latching at position 23; T=32: 32 positions for 360°

<sup>2)</sup> For length code, see MOTION-CONNECT connection systems.

#### Overview

The SINUMERIK MCP 483C PN machine control panel permits user-friendly operation of the machine functions. It is suitable for machine-level operation of milling, turning, grinding and special machines.

In addition to PROFINET, SINUMERIK MCP 483C PN has also retained its complete Industrial Ethernet functionality. The network technology can be changed over using DIP switches.

All keys are designed with replaceable key covers for machine-specific adaptations. The key covers can be freely inscribed using laser. Transparent key covers can be used as an alternative.

The machine control panel is mounted from the rear using special clamps supplied with the panel.

#### Design

##### Control elements:

- Mode selectors and function keys
  - 50 keys with LEDs
  - Direction keys for milling machines with rapid traverse override (key covers for direction keys for turning machines are supplied in the accessories pack)
- Spindle control with override spindle (rotary switch with 16 positions)
- Feed control with feed/rapid traverse override (rotary switch with 23 positions)
- Key switch (4 positions and 3 different keys)
- Emergency stop button (2 × (1 NO + 1 NC))

##### Key type:

- Mechanical keys

##### Interfaces:

- PROFINET/Industrial Ethernet
- 9 inputs/6 outputs for 9 control devices (additional cable set required for control devices)
- For 2 handwheels in conjunction with SINUMERIK 840D sl

##### Expansion facility:

- 2 slots for control devices ( $d = 16 \text{ mm}/0.63 \text{ in}$ )

#### Integration

The SINUMERIK MCP 483C PN machine control panel can be used for:

- SINUMERIK 840D sl

For Ethernet or PROFINET ordering data, see Industrial Ethernet Switches – SCALANCE.

<sup>1)</sup> 16G: Latching at position 16; T=24: 24 positions for 360°  
23G: Latching at position 23; T=32: 32 positions for 360°

#### Overview

The SINUMERIK MCP 483 PN machine control panel with membrane keys is designed to permit user-friendly, well-structured operation of the machine functions. It is suitable for machine-level operation of milling and turning machines, and particularly grinding machines.

In addition to PROFINET, SINUMERIK MCP 483 PN has also retained its complete Industrial Ethernet functionality. The network technology can be changed over using DIP switches.

46 keys and both control device slots are equipped with user-inscribed slide-in labels for adapting to specific machines. A DIN A4 sheet (for laser printers) for inscribing the slide-in labels is included in the scope of supply.

A connecting cable is included in the scope of supply for connecting the direct keys of the SINUMERIK operator panel fronts OP 012/OP 015A/OP 019/TP 015A.

The machine control panel is mounted from the rear using special clamps supplied with the panel.

#### Design

##### Control elements:

- Mode selectors and function keys
  - 50 keys with LEDs
  - Direction keys for milling machines with rapid traverse override
  - Default key assignment includes 17 freely assignable customer keys
- Spindle control with override spindle (rotary switch with 16 positions)
- Feed control with feed/rapid traverse override (rotary switch with 23 positions)
- Key switch (4 positions and 3 different keys)
- Emergency stop button (2 × (1 NO + 1 NC))

##### Key type:

- Membrane keys

##### Interfaces:

- PROFINET/Industrial Ethernet
- 9 inputs/6 outputs for 9 control devices (additional cable set required for control devices)
- For 16 direct keys of the OP 012/OP 015A/OP 019/TP 015A (connecting cable (850 mm/2.79 ft) included in scope of supply)
- For 2 handwheels

##### Expansion facility:

- 2 slots for control devices ( $d = 16 \text{ mm}/0.63 \text{ in}$ )

#### Integration

The SINUMERIK MCP 483 PN machine control panel can be used for:

- SINUMERIK 840D sl

#### Technical specifications

|                                                         |                                                                                                                                                                                                                                                                                                                          |

For Ethernet or PROFINET ordering data, see Industrial Ethernet Switches – SCALANCE.

<sup>1)</sup> 16G: Latching at position 16; T=24: 24 positions for 360°  
23G: Latching at position 23; T=32: 32 positions for 360°

<sup>2)</sup> For length code, see MOTION-CONNECT connection systems.

### Overview

Like the SINUMERIK MPP 483 IEH, the SINUMERIK Machine Push Button Panel MPP 310 IEH (Machine Push Button Panel, width 310 mm (12.2 in), for Industrial Ethernet with port for Hand-held terminal) offers 8 large, long-stroke keys for easy machine operation, as well as a membrane keyboard for powerful setup functions. The SINUMERIK MPP 310 IEH is ideally suited as a supplement to the SINUMERIK OP 08T operator panel front.

The SINUMERIK MPP 310 IEH is suitable for use with many different types of machine for any application which requires excellent ergonomics and flexibility of operation.

A DIN A4 sheet for laser printers for inscribing the slide-in labels plus a set of colored key caps are included in the scope of supply.

The SINUMERIK Machine Push Button Panel is mounted from the rear using special clamps supplied with the panel.

### Design

- Spindle override
- Feed override
- 8 customer keys (long-stroke keys, Schlegel) with LED, slide-in labels
- Blank cover for retrofit of Electronic Key System EKS (Euchner)
- 25 function keys with LED (membrane keys), slide-in labels
- With port for SINUMERIK HT 2/HT 8 handheld terminals
- Emergency stop override key
- Emergency stop button
- 4 extension keys (3SB3 keys) with LED, slide-in labels

### Integration

The SINUMERIK MPP 310 IEH Machine Push Button Panel can be used for:

- SINUMERIK 840D sl

## Machine control panels

### SINUMERIK MPP 483 IE

#### Overview

The SINUMERIK MPP 483 IE (Machine Push Button Panel, width 483 mm (19.02 in) for Industrial Ethernet) is available as an expansion to SINUMERIK and PLC-controlled machines. Its modular design and ergonomically arranged control elements facilitate and simplify operation.

The SINUMERIK MPP 483 IE provides large, long-stroke keys for easy machine operation as well as a membrane keyboard for powerful set-up functions.

Tuned to the requirements of the powertrain sector, the SINUMERIK MPP 483 IE is suitable for use with many different types of machine wherever ergonomics and operating flexibility are priorities. A DIN A4 sheet for laser printers for inscribing the slide-in labels plus a set of colored key caps are included in the scope of supply.

The SINUMERIK Machine Push Button Panel is mounted from the rear using special clamps supplied with the panel.

#### Design

The basic version of the SINUMERIK MPP 483 IE Machine Push Button Panel offers, for example:

- Emergency stop button (4-wire), latching, tamper-proof
- 8 assembled illuminated pushbuttons for control elements ( $d = 22.5 \text{ mm}/0.89 \text{ in}$ )
- 2 blanking plugs for easy retrofitting
- 25 function keys with inscribed standard slide-in labels (membrane keys)
- Key switches with 2 positions for bridging the emergency stop circuit and for authorization of mode selection
- Direct key connection for SINUMERIK OP 012/OP 015A/TP 015A/OP 019, incl. ribbon cable
- Feed override

Interfaces for 2 handwheels when connected via Industrial Ethernet (function depends on CNC software)

- Communication via Industrial Ethernet

#### Expansion facilities:

- 2 spare slots ( $d = 22.5 \text{ mm}/0.89 \text{ in}$ )
- Spindle override
- Individual adaptation of colors and labels on membrane and long-stroke keys. As a general rule, all keys can be freely assigned and inscribed.
- SINUMERIK MPP 483 IEH with connection for a SINUMERIK HT 2/HT 8 handheld terminal

#### Special versions:

- SINUMERIK MPP 483 IE-S../MPP 483 IEH-S...: Special versions with virtually unlimited configuration options combining various control elements and options are available, for example, with the EKS identification system (Euchner Key System).
- SINUMERIK MPP 483 IE-L/MPP 483 IEH-L: This special Large version is characterized by a higher masking frame (244 mm/9.61 in) that offers additional mounting space as an integrated expansion panel.

#### Integration

The SINUMERIK MPP 483 IE Machine Push Button Panel can be used with:

- SINUMERIK 840D sl

# SINUMERIK Operate

## Machine control panels

### SINUMERIK expansion panel

#### Overview

The SINUMERIK expansion panel is used to install up to 12 additional control elements, e.g. pushbuttons, indicator lights, and key switches as an expansion to a Machine Push Button Panel or a machine control panel or to expand the free inputs/outputs of a machine control panel.

The expansion panel has rounded edges in conformance with the new design of the SINUMERIK operator panels. Clamp-mounting facilitates installation.

#### Design

The expansion panel is 19" wide, and can accommodate up to twelve 22 mm (0.87 in) control elements of any type.

The 12 slots are pre-punched and can be easily broken out as required. Panels with customized complements can be provided on request.

Inscriptions are made on 2 slide-in labeling strips which are inserted from the rear.

For add-on control elements, see also the special variants of MPP 483/MPP 483 IE.

### SIRIUS 3SB3

### Laser inscriptions

#### Overview

#### Innovative technology, simple installation

SIRIUS 3SB3 is our modular, tried-and-tested complete range of pushbuttons and indicator lights. Whether round or square, plastic or metal – we can supply the ideal solution for any application. You benefit because SIRIUS 3SB3 products are quick and easy to install – and are dependable in operation.

#### Benefits

- Emergency stop with reliable direct connection to AS-Interface
- SIRIUS 3SB3 command devices in plastic and metal for the world market
- Rugged metal control devices: Degree of protection IP67/NEMA 4
- Cost-effective and uniquely identifiable with integral super-bright LED
- Multiple connection possibilities: screw-type, solder pin or spring-loaded terminals

#### More information

You can find further information in the Catalog IC 10 or Siemens Industry Mall.

[www.siemens.com/industrymall](http://www.siemens.com/industrymall)

#### Overview

High-quality, individual inscription of the mechanical keys on SINUMERIK machine control panels with special symbols as required by the customer is easy using lasers.

Laser inscription is possible on all materials in principle and can therefore be used for permanent and reliable identification, also for special keys in the case of SINUMERIK machine control panels.

The quality of inscription produced by laser is significantly higher than that attained conventional inscription techniques.

#### Benefits

- Maximum precision
- Long service life
- Professional key design enhances the ergonomics and appearance of the machine tool

#### More information

For professional advice and solutions regarding laser-inscribed, mechanical key caps/key symbols for the SINUMERIK machine control panels, please contact the specialist support personnel of these companies:

# SINUMERIK Operate

## Keyboards

### KBPC CG US standard PC keyboard

#### Overview

Programs and texts can be edited easily with the compact, ergonomically designed KBPC CG US standard PC keyboard.

The standard PC keyboard is not suitable for industrial use (EMC) and should not be used as a permanent installation. It may be used only for servicing and commissioning.

#### Integration

The KBPC CG US standard PC keyboard can be used for:

- SINUMERIK 840D sl with SINUMERIK PCU 50.5

The standard PC keyboard cannot be used in conjunction with the full CNC keyboard.

### Keyboard tray

#### Overview

The extremely stable 19" keyboard tray in anthracite makes work easier when using a standard external keyboard with an operator panel.

Special screws permit easy attachment of the keyboard tray, and equally easy removal after work is finished.

If required, a version with an additional removable tray for a mouse is also available.

#### Overview

The SINUMERIK KB 310C full CNC keyboard permits user-friendly input of programs and text.

The keyboard is mounted from the rear using special clamps supplied with the panel.

#### Design

##### Control elements:

- Standard/US QWERTY layout
- 75 mechanical keys
- Alpha block with special characters
- Numeric block with special characters
- Cursor key group
- CNC function keys with hot keys for fast selection of the control area

##### Interface:

- USB 1.1

#### Integration

The SINUMERIK KB 310C full CNC keyboard is used for:

- SINUMERIK 840D sl

# SINUMERIK Operate

## Keyboards

### SINUMERIK KB 483C

#### Overview

The SINUMERIK KB 483C full CNC keyboard permits user-friendly input of programs and text.

The keyboard is mounted from the rear using special clamps supplied with the panel.

#### Design

##### Control elements:

- Standard/US QWERTY layout
- 78 mechanical keys
- Alpha block with special characters
- Numeric block with special characters
- Cursor key group
- CNC function keys with hot keys for fast selection of the control area

##### Interface:

- USB 1.1

#### Integration

The SINUMERIK KB 483C full CNC keyboard is used for:

- SINUMERIK 840D sl

#### Technical specifications

#### Overview

The full CNC membrane keyboards supplied by DEMME AG in Siemens design permit user-friendly input of programs and text.

The full CNC keyboards are mounted from the rear using special clamps supplied with the keyboard.

#### Design

##### Control elements:

- Standard/US QWERTY layout
- Membrane keyboard with 78 keys (QWERTY 483)
- Membrane keyboard with 75 keys (QWERTY 310)
- Alpha block with special characters
- Numeric block with special characters
- Cursor key group
- CNC function keys with hot keys for fast selection of the control area

##### Interface:

- USB 1.1

#### Integration

Membrane keyboards can be used for:

- SINUMERIK 840D sl

#### Technical specifications

# SINUMERIK Operate

## Storage devices

### SINUMERIK card reader USB 2.0

#### Overview

The SINUMERIK card reader for CF/SD/MMC memory media is suitable for archiving user data and can be installed in front panels. The connection is made via a USB interface.

#### Function

The SINUMERIK card reader is suitable for CF, SD and MMC cards and is designed for the archiving and exchange of user data (SD cards with up to max. 2 GB capacity).

Since the reader can be installed in front panels, data can be exchanged without opening the control cabinet door.

The card reader can be booted. Cards can be inserted and removed during operation.

#### Integration

The SINUMERIK card reader for CF/SD/MMC memory media can be connected to:

- SINUMERIK PCU 50.5
- SINUMERIK TCU (CompactFlash card only)

### Overview

The CompactFlash card is used to store user data or the CNC software.

### Integration

The CompactFlash card is suitable for:

- SINUMERIK 840D sl: Supplementary memory for user data in the SINUMERIK PCU 50.5

### Technical specifications

# SINUMERIK Operate

## Storage devices

### Industrial USB hub 4

#### Overview

The Industrial USB hub 4 is essentially used as a USB hub for the connection of I/O devices to SINUMERIK PCU 50.5.

USB peripherals can be connected to the operator component and operated via the Industrial USB hub 4 without opening the cabinet door.

The Industrial USB hub 4 differs from commercially available USB hubs mainly in its suitability for use in rugged industrial environments (IP65).

#### Application

Use of the Industrial USB hub 4 means that up to 4 I/O devices, such as USB flash drive, USB floppy disk drive, USB card reader, etc. can be connected simultaneously to the operator component, thereby increasing the availability of the system to be operated. The cabinet door no longer has to be opened in order to connect the I/O devices. Continuous operation of the operator component is therefore possible.

In addition, the Industrial USB hub 4 has the following features:

- Inspection window for each interface
- Vibration-proof latching of connected USB cables and USB flash drives
- One LED per interface for checking the data traffic
- Sufficient interior space for easy insertion and removal
- Facility for attachment to a standard mounting rail

#### Integration

The Industrial USB hub 4 is suitable for connection to SINUMERIK PCU 50.5.

### Overview

The SIMATIC IPC USB FlashDrive is the ideal mobile storage medium. Thanks to the rugged and ultra-compact construction in a metal enclosure, fast data transfer (USB 2.0) and the high memory capacity of 8 GB, the USB FlashDrive offers optimum values for use in industrial applications. It can be used to replace floppy disks or CD-ROMs as data storage and it is supplied with boot capability.

### Benefits

- 2 USB FlashDrives can be plugged into the SIMATIC PC/SINUMERIK PCU 50 one above the other
- Suitable for use in industrial environments thanks to the metal enclosure
- Faultless operation (system test) with SIMATIC PC/PG (hardware and software)/SINUMERIK PCU 50
- Automation License Manager V2.0 can be installed.

### Application

The SIMATIC IPC USB FlashDrive is the fastest and simplest method for saving data (e.g. recipes, configuration data, user data) and transporting them easily from one place to another. It can also be used as boot medium, e.g. for SIMATIC PC BIOS Manager, SIMATIC PC Image Creator, or SINUMERIK PCU 50.

Typical users are development and servicing engineers as well as application and technical consultants.

### Function

- Formatted for boot capability incl. preinstalled operating system (FreeDOS) for use as a boot medium, e.g. for SIMATIC PC Image Creator
- High performance for faster data transfer – USB 2.0 high-speed
- High memory capacity of 8 GB
- Simple installation – plug and play, no drivers necessary
- High degree of data security thanks to write protection switch
- Status LED for data transfer and operating state
- SIMATIC BIOS Manager, a software tool for SIMATIC PCs for testing and duplication of BIOS setup settings (CMOS data) included in the scope of supply
- No external power supply necessary

### Integration

The SIMATIC IPC USB FlashDrive is suitable for:

- SIMATIC PC/PG
- SINUMERIK PCU 50.3/SINUMERIK PCU 50.5

Recommended operating systems:

- Windows XP

## Industrial switches

### Industrial Ethernet Switches – SCALANCE

#### Overview

SCALANCE X is the product group of industrial switches from SIMATIC NET for Industrial Ethernet. Switches are active network components that specifically distribute data to the relevant addressees.

#### Application

##### SCALANCE XB005 (IP20 degree of protection)

- The unmanaged Industrial Ethernet Switch SCALANCE XB005 is optimized for configuring Industrial Ethernet networks with 10/100 Mbit/s in line and star topologies
- Enclosure for space-saving installation in control cabinets or boxes on a standard mounting rail

##### SCALANCE X005/X108 (IP30 degree of protection)

- For configuring Industrial Ethernet networks in line and star topologies
- The 5/8 RJ45 sockets are industry-compatible and feature additional retaining collars for connection to the IE FC RJ45 Plug 180

##### SCALANCE X208/X208PRO (IP30/IP65 degree of protection)

- For configuring Industrial Ethernet networks in line, star or ring topologies (8 electrical ports):
  - SCALANCE X208 for installation in the control cabinet
  - SCALANCE X208PRO, specially for use outside the control cabinet
- The 8 RJ45 sockets of the SCALANCE X208 are industry-compatible and feature additional retaining collars for connection to the IE FC RJ45 Plug 180
- The 8 PROFINET-compatible M12 sockets of the SCALANCE X208PRO are designed with IP65 degree of protection for connection to the IE M12 Plug PRO or the pre-assembled IE M12 connecting cable
- The SCALANCE X208PRO can be installed on a DIN rail/ S7-300 rail or as a compact flat or upright model directly on the installation or machine
- Status information can be read in any mounting position thanks to the inclined row of LEDs
- Power can also be supplied to the SCALANCE X208PRO from outside the control cabinet from the PS791-1PRO power supply module (for 230 V AC)

#### Selection and ordering data

# SINUMERIK Operate

## Housing systems

### Rittal command panel systems

#### Overview

Rittal command panel systems are manufactured with exact dimensions for any combination of SINUMERIK operator components and are ready for installation. Operator components can be optimally installed in these individually dimensioned panels. Select from a wide range of different housing systems, e.g.:

#### **Rittal VIP 6000 – Multi-talented in shape and function**

The increased surface size resulting from cooling fins and screw channels is the most reliable and cheapest type of heat dissipation.

- Individual mounting depths from 155 mm to 438 mm (6.10 in to 17.24 in)
- 3 frame versions (wide, narrow or combined), depending on application and design requirements
- Optimum heat dissipation with 3 types of housing
- Versatile housing connectors
- Continuous edge profile, 3 versions in 5 colors
- Keyboard housing, mounting depths: 27 mm/44 mm/105 mm (1.06 in/1.73 in/4.13 in), tray for keyboards
- Continuous screw channels for flexible internal design
- Rear panel screwed or hinged

#### **Rittal Optipanel – The slimline alternative design**

- Individual mounting depths: 50 mm/100 mm (3.94 in)/150 mm
- Standard housing matched to SINUMERIK operator panels 19" x 7 HU, mounting depth 100 mm (3.94 in), available ex stock
- Continuous edge profile
- Keyboard housing, mounting depths: 50 mm/100 mm (1.97 in/3.94 in), tray for keyboards, tilting angle continuously adjustable from 80° to 155°
- Continuous T slot for flexible internal design
- Rear panel screwed or hinged

#### Overview (continued)

#### **Rittal Comfort Panel – Functional and reliable**

The "third dimension" command panel in the HMI sector. With a new design and additional functions, the Rittal Comfort Panel is ideally matched to SINUMERIK operator components.

- Individual mounting depths from 74 mm to 464 mm (2.91 in to 18.27 in)
- Standard housing matched to SINUMERIK operator panels 19" x 7 HU, mounting depths: 74 mm/113 mm/152 mm/191 mm/308 mm (2.91 in/4.45 in/5.98 in/7.52 in/12.13 in), available ex stock
- Keyboard housing, mounting depths: 35 mm/74 mm (1.38 in/2.91 in), tray for keyboards, tilting angle from 88° to 136°, with toothed wheel adjustable in 8° steps; can be swung up out of the way after use to save space.
- Rear panel screwed or hinged
- Design profile for color coordination with the machine or equipment ID
- All-round soft profile made of plastic reduces the risk of injury
- Flat front frame for optimum access to lateral drives
- Continuous mounting channels for individual dismounting of accessories, internally and externally

#### Accessories

##### **Support arm systems**

- **CP-S** compact, for small and flat panel housings
- **CP-L** open for simple cable inlet, closed for small to medium panel housings
- **CP-C** for medium to high loads
- **CP-XL** open for simple cable inlet, closed for high loads

##### **Stand systems**

- Stationary
- Mobile
- Adjustable height
- Console as stable base for supporting arm systems

#### More information

##### **Rittal Service**

Configure your Optipanel/Comfort Panel online now – quickly, easily and reliably at:

[www.rittal.de/konfigurator](http://www.rittal.de/konfigurator)

Sending of:

- Visual presentation of the selected Optipanel/Comfort Panel
- 3D data for integration in the machine and plant construction for virtual sample construction on the screen

For full details, please refer to the Rittal Manual. Contact your Rittal representative or order the manual directly from Rittal.

### Overview

#### Slim Line Commander

The ROSE SL 2000 and SL 3000 Slim Line Commanders are tailored housing systems for built-in control components with numerous configuration possibilities.

With various mounting depths, the basic versions of the aluminum section housing systems in various sizes provide ideal surface-mounting possibilities for CNC with:

- SINUMERIK OP 010/OP 010S/OP 010C/OP 012/OP 015/OP 015A/TP 015A
- SINUMERIK full CNC keyboards/machine control panels
- SINUMERIK Machine Push Button Panel

#### SL 2000

- Multifunctional built-in and add-on system with all-round fixing slots
- Individual front panel installation from front or back
- Mounting depths:  
80 mm/110 mm/185 mm (3.15 in/4.33 in/7.28 in)

### Overview (continued)

#### SL 3000

- Variable depth by combining sections
- Hollow chamber profile for hidden installation of drives and connectors
- Mounting depths: 60 mm/160 mm/200 mm (2.36 in/6.30 in/7.87 in)  
Mounting depths with combined profiles:  
120 mm/220 mm/260 mm/360 mm (4.72 in/8.66 in/10.24 in/14.17 in)

#### LIMANDA

LIMANDA is the ideal polyamide panel housing for installing small operator panels and control devices for mobile and fixed applications to the IP65 degree of protection.

- Dimensions of Limanda 1:  
317 mm × 287 mm × 75 mm (12.48 in × 11.30 in × 2.95 in)
- Dimensions of Limanda 2:  
270 mm × 248 mm × 64 mm (10.63 in × 9.76 in × 2.52 in)

Suitable for SIMATIC Panels:

- PP7/PP17
- OP7/OP15/OP17
- TP27-6/TP 170
- C7

## Security note

In the case of software for remote maintenance or connection to higher-level networks, suitable protection measures must be taken (including industrial security, e.g. network segmentation) to guarantee safe operation of the system.

You can find more information on Industrial Security on the Internet at:  
[www.siemens.com/industrialsecurity](http://www.siemens.com/industrialsecurity)

# SINUMERIK Integrate

## Introduction

### Overview

#### Simple, all-round process integration

Integration of the machine tool into a company's workflow is an essential precondition for achieving a lean, efficient manufacturing operation. SINUMERIK Integrate offers a broad range of products for integrating machine tools into communication, engineering and production processes associated with metal-cutting manufacturing.

#### Integration of man and machine

SINUMERIK Integrate bundles IT-related functions into a uniform process suite and fully integrates the machine tool into the company's workflow. This integration of manufacturing and IT processes means the production manager, the plant operator, the programmer in the job planning department, the maintenance technician as well as those mechanical engineers with responsibility for design and servicing are networked and incorporated into the overall system by means of defined processes.

#### Integration into engineering processes

SINUMERIK Integrate employs an innovative PLM process to help users boost the productivity of machine tools over their entire service life and to commission them more effectively. The openness of the SINUMERIK system offers potential for optimizing technology, programming and operation for specific machines and end users.

#### Integration into production processes

SINUMERIK Integrate integrates machine tools quickly, simply and efficiently into the complicated production and communication processes of a company. Even the process of integrating machines into an existing, complex company IT network is quick and simple. The result is higher productivity and availability combined with an overall reduction in production costs. A closed CAD/CAM/CNC chain minimizes the time and cost involved in creating and simulating programs and for conducting trial program runs.

Integration of the CNC into the company's workflow

### Overview (continued)

#### Software modules for open integration

##### Create-it!

Solutions for creating and configuring user-specific functions in the SINUMERIK Operate user and programming interface and for programming interfaces to the machine tool and to a company server are bundled in this module. It offers extensive function libraries, for example, which allow the use of PLC, NC and HMI functions throughout the network.

##### Lock-it!

Protection of technological know-how against unauthorized access, e.g. copy protection or the safekeeping of data containing in-house expertise.

##### Run-it!

Includes the entire runtime system for the execution of individual user interfaces, the execution of customized compile cycles on the NC kernel, the control of drives and the execution of the virtual NC kernel (VNCK).

#### Software modules for integration into the production process

##### Manage-it!

Organization and management of NC programs and tools. It includes solutions for every aspect of tool, data and program management to permit fast and general availability of manufacturing information. It also establishes an optimum link between design, production planning and production. The integrated interface in Teamcenter optimizes processes and represents them consistently.

##### Access-it!

Uniform communication interface for the SINUMERIK CNC which permits remote access for the purpose of machine tool diagnostics. It therefore reduces repair times and increases machine availability by supporting fast online access. Backups can be created and downloaded via interfaces to higher-level data backup programs.

##### Analyze-it!

Sophisticated functions for condition-based maintenance and analytical functions based on key performance indicators. Continuous evaluation of data in the production process helps to increase machine operating times and reduce outages and downtimes by the deployment of condition-oriented maintenance routines. It also supports the evaluation of key performance indicators relating to the wear and tear of mechatronic components.

SINUMERIK Integrate software modules

# SINUMERIK Integrate

## Create-it!

### Create MyHMI

#### Overview

The openness in the HMI enables customers to implement their own integrated operating and display functions or their own user interfaces. This means that users can tailor HMI functions and technological machine operating procedures to meet their own requirements.

The HMI application can be created either by programming in a high-level language or by means of a text editor.

A simple configuring process using a standard editor is available with SINUMERIK Integrate Run MyScreens.

#### Application

|                                                              | SINUMERIK Operate user interface                                                                                                                      | Requirements                                                        |

Use of the openness in the HMI is always subject to conclusion of an OEM contract.

#### Function

##### **SINUMERIK Integrate Create MyHMI /3GL**

The SINUMERIK Integrate Create MyHMI /3GL programming package allows users to develop high-level language applications in programming language Qt/C++ for the SINUMERIK Operate user interface. A Microsoft .NET-based interface is also provided so that users can create a customized user interface with individual look and feel.

- Integration of single or multiple operating screens as well as user-defined operating areas in SINUMERIK Operate with NCU and PCU.
- User interfaces for stand-alone execution
- Support for Microsoft .NET interfaces

To develop customized applications, the software release of the SINUMERIK Integrate Create MyHMI /3GL programming package which is compatible with the relevant SINUMERIK Operate version will be required for execution on the target hardware.

Example: SINUMERIK Operate software version 4.4 requires version 4.4 of the SINUMERIK Integrate Create MyHMI /3GL package.

##### **SINUMERIK HMI configuring package WinCC flexible 2008**

With the SINUMERIK HMI configuring package WinCC flexible 2008, any skilled worker with basic technical experience can create technology-related modules for programming, operation and visualization, without the need for high-level language expertise.

It is therefore possible to create user interfaces that are capable of execution on SIMATIC CE operator panels and which utilize the SINUMERIK communication interfaces.

The graphics-supported engineering tool SIMATIC WinCC flexible Advanced is used as the basis for configuration. You are therefore able to create stand-alone user interfaces for operating and visualizing plant and machine tools. The SINUMERIK HMI configuring package WinCC flexible 2008 is required additionally in order to create user interfaces for SIMATIC CE panels.

This package permits user interfaces to be integrated in SIMATIC CE panels on the SINUMERIK (SIMATIC HMI panels of the 170 and 270 series and the MP 370).

SIMATIC WinCC flexible 2008 Advanced is not included in the SINUMERIK HMI configuring package WinCC flexible 2008 and must be ordered separately if required.

#### Integration

##### **SINUMERIK Integrate Run MyHMI /3GL**

HMI Open Architecture applications created with the programming package SINUMERIK Integrate Create MyHMI /3GL can be executed on NCUs and PCUs with software option SINUMERIK Integrate Run MyHMI /3GL.

HMI Open Architecture applications which utilize the .NET interface can execute only on PCUs and require software option SINUMERIK Integrate Run MyHMI /3GL.

Software option SINUMERIK Integrate Run MyHMI /3GL is required for the installation and operation of other software which is integrated in SINUMERIK Operate or in parallel with it. This also applies in cases where the supplementary software does not utilize SINUMERIK communication interfaces.

##### **SINUMERIK Integrate Run MyScreens**

The software option SINUMERIK Integrate Run MyScreens permits the execution of text files with EasyScreen format. These configurations can execute on NCUs or PCUs.

# SINUMERIK Integrate

## Create-it!

### Create MyConfig

#### Overview

Create MyConfig is used by the machine manufacturer to create and run a project for automated commissioning/production of machines with SINUMERIK 840D sl control systems. Even upgrades of those CNC systems at the end customer can be configured and executed automatically.

Thanks to its modular concept, Create MyConfig allows different machines of a series to be commissioned and upgraded with one Installer package.

The individual operations on the machine can be performed faster and with greater ease and reliability.

#### Benefits

- Significant reduction of the required commissioning or upgrade time
- Avoidance of errors during commissioning or upgrade processes through structured preparation and automation of process steps
- Reproducibility of the automatic commissioning or upgrade process
- Simplification of the commissioning or upgrade process at the system
- Detailed knowledge of the control system is essential only to configure the InstallerUpdate package, but not to perform commissioning or upgrades at the machine

#### Design

Create MyConfig comprises the following components:

- Expert  
Configuring an Installer package, which contains a configurable sequence of production or upgrade steps and the associated data
- Diff  
Data comparison between folders, SINUMERIK archives, files and CNC data
- Topo  
Creating an image of the SINAMICS topology and a library of SINAMICS components

#### Function

Create MyConfig offers support for the installation and the upgrade and retrofit of, for example:

- HMI installations
- OEM applications
- NCK area (CNC software, archives)
- ShopMill/ShopTurn applications
- Standard cycles
- Measuring cycles
- Languages
- PLC (for CNC software, function blocks)
- OEM screen forms
- Machine data manipulations
- Drives
  - Manipulation of SINAMICS data in drive archives
  - Creation of a SINAMICS archive with predetermined topology
  - Assignment of drive data in different SINAMICS topologies

#### Integration

Requirements:

- SINUMERIK 840D sl with SINUMERIK Operate

Requirements for PC/PG:

- Windows XP/Windows 7 operating system
- Drive with 100 MB of free memory space
- Network/Ethernet connection

The following must also be installed on the PC/PG:

- Microsoft .NET Framework
- Microsoft Internet Explorer, version 6 or later
- Acrobat Reader, version 4 or later

#### Selection and ordering data

### Overview

#### Implement OEM-specific solutions in the CNC software with SINUMERIK Integrate Create MyCC

Create MyCC can be used to implement manufacturer-specific NCK functions (compile cycles). They are programmed in C or C++ on a SUN workstation with the Solaris operating system. The result is uploaded to the SINUMERIK as an executable file and permits the real-time area of the control to be adjusted and expanded.

Create MyCCI supports the development of loadable compile cycles based on customized interfaces without requiring special hardware as a development environment. For this special application, the customer uses software (GNU compiler and GNU linker) in an environment known as "Cygwin software shell" on a Windows PC. Use of this application is conditional upon installation of the corresponding interface as a loaded compile cycle on the control system.

The Create MyCC package is subject to the issue of an export license. It is also subject to the conclusion of an OEM contract.

# SINUMERIK Integrate

## Create-it!

### Create MyInterface

#### Overview

The Create MyInterface software is used to integrate SINUMERIK controls into a customer's production network. All essential machine data (such as status information, piece counts, alarms, messages, CNC programs, tool service life) can be exchanged via Create MyInterface between a central control system and the PLC.

#### Benefits

- Simple integration of the control system with customer/project applications through a defined Ethernet/TCP-IP-based interface
- Simple configuring of the data to be transferred on the PLC
- Create MyInterface as a tool that can be used to implement measures designed to boost productivity:
  - Machine capacity utilization improved by production control
  - Machine downtimes reduced by transmission of maintenance data, etc.
- Simple application through the use of standard hardware/software components from the PC world
  - Networking hardware/software (Ethernet cards, TCP-IP)
  - Familiarization
  - Commissioning, maintenance

#### Function

- Defined, opened communications interface for exchanging essential data of the SINUMERIK control
- Data transmission can be initiated by the host computer and/or by the SINUMERIK control
- The host application is created by the user in the Create MyInterface environment (interfaces, examples)
- The following data can be exchanged:
  - CNC programs, tool data
  - Machine status data
  - Messages
  - Production dialog data
  - Mode switchover, synchronization
  - Transport jobs
  - Configurable data from PLC or CNC

Even without its own user interface, Create MyInterface can run with additional languages (e.g., Korean, Russian, Simplified Chinese).

#### Integration

##### Requirements:

- SINUMERIK 840D sl with SINUMERIK PCU 50, max. 4 NCUs
- Computer-controlled loading and unloading of tools requires Manage MyTools.

Create MyInterface cannot run by itself in a given systems environment. An application to be created for a customer specifically (not included in Create MyInterface) must always be provided on the host computer side.

#### Selection and ordering data

### Overview

Lock MyCycles can be used to encrypt cycles and then store them as protected data in the control. Execution in the NC is possible without restrictions, but it is not possible to view the cycle. This protects the internal company know-how. The cycle can, however, be copied in encrypted form. It can, therefore, be used on other machines. However, it is also possible to permanently link the cycle to a specific CNC hardware.

### Lock MyPLC

All-round PLC machine program protection (SW version 4.6 and higher) is afforded with SIMATIC STEP 7 V5.5 and higher by encrypted block protection with the S7 Block Privacy program for the offline and online views. The KNOW-HOW-PROTECT function is still included in the application to guard technological knowledge against unauthorized access.

# SINUMERIK Integrate

Run-it!

Run MyCC

## Overview

The openness in the NCK area of the SINUMERIK 840D sl allows users to develop solutions for (almost) every technological problem and application!

This is possible with the integration of technological add-on functions in the CNC software for NCU in the form of compile cycles. This kind of compile cycle can either be programmed by the user based on Create MyCC and the appropriate development environment, or through development and testing in industrial conditions contracted to Siemens.

Loadable compile cycles that offer special interfaces for customized developments can be implemented with Run MyCCI.

## Application

A typical example for the use of compile cycles are special transformations for specific machine kinematics. With these transformations, workpieces can be programmed in Cartesian coordinates while the transformation calculates the required machine axis movements.

# SINUMERIK Integrate

## Run-it!

### Run MyHMI

#### Overview

#### Run MyHMI

Programmable HMI applications can be executed with Run MyHMI. The applications are programmed with either QT/C++, Visual Basic .NET or C#. The programming package offers complete flexibility and a very wide range of functions for generating customized operating screens. The user is given very broad scope for expanding the SINUMERIK user interface, from the simple operation of integrating individual user screens in SINUMERIK Operate to the more complex process of creating customized user interfaces.

#### Run MyHMI /3GL

Run MyHMI /3GL permits programmed HMI applications to be executed on the PCU 50.5 or the NCU and also allows

- the integration of individual screens
- the creation of user-defined operating areas

#### Run MyHMI /3GL (.NET)

Run MyHMI /3GL permits programmed HMI applications to be executed on the PCU 50.5 under the Windows operating system, and also allows the creation of

- user-defined operating areas with .NET Framework
- background functions with data communication

#### Run MyScreens

The Run MyScreens functionality allows users to design their own user interfaces in order to visualize either machine-manufacturer or end-user functional expansions or simply their own screen form layouts.

#### Run MyHMI /PRO

Run MyHMI /PRO allows users to run configurations on the PCU 50.5 or the NCU that have been created with the Configuration System HMI PRO CS. It includes the standardized operating screens within HMI PRO as well as the freely configurable user screens that have been created by variable layout.

#### Run MyHMI /SIMATIC OP

The software option SINUMERIK Integrate Run MyHMI /SIMATIC OP allows users to run their own HMI applications on SIMATIC CE panels on the SINUMERIK control. The SIMATIC WinCC flexible 2008 engineering software and the SINUMERIK HMI configuring package WinCC flexible 2008 are needed to create these applications.

When the SINUMERIK HMI configuring package WinCC flexible 2008 is added, the functions can be used in conjunction with:

- CNC variable dialog (symbolic presentation)
- CNC file management, e.g. selection of part program
- CNC functions, e.g. Create tool, CNC Start/Stop and other PI services
- Alarms and messages in plain text

SIMATIC CE Panels can be connected via PROFIBUS or Ethernet depending on which interface is provided on the panel.

One SINUMERIK Integrate Run MyHMI /SIMATIC OP software option is required per NCU in order to execute OEM applications on the SIMATIC CE Panels (OP 170B, OP 177B, OP 277, TP 170B, TP 177B, TP 277, Mobile Panel 170, Mobile Panel 177, Mobile Panel 277, MP 277, MP 370, MP 377).

4

Run MyVNCK integrates NC functions into the simulation process. The kernel uses the same source code as the NC kernel in the control system, allowing NC algorithms, language scope, commissioning, data management and communication to be handled in the same way for both Run MyVNCK and NCK. Run MyVNCK is capable of simulating control sequences with their full range of functions. NC programs including all their high-level language elements can therefore be checked for syntactic correctness and executability. The working area can be reliably assessed for risk of collision and the workpiece geometry and motion behavior can be evaluated. Program runtimes can also be calculated.

By deploying other components such as the CAD data for the real machine, the machine manufacturer or CAM system manufacturer can create a virtual machine that resembles the real machine as closely as possible.

Use of SINUMERIK Integrate Run MyVNCK is always subject to conclusion of an integration contract.

## Overview

### Network-wide tool management

Tool organization across the entire production area is one of the central tasks of CNC production. Requirements are:

- Smooth tool handling processes
- Cost control
- Cost savings

Integrated software solution for managing the tool cycle from tool setting to the tool stores and finally to setup on the machine.

Forward tool planning reduces machine downtimes caused by missing tools.

Optimization of cycle and nonproductive times with respect to tools.

This is where Manage MyTools makes the difference. It makes this potential for rationalization transparent and provides functions that help attain the potential savings revealed.

SINUMERIK Integrate Manage MyTools has the correct connection concepts and functions for a complete overview of the tools used and to permit a closed tool data cycle in the production area for:

- Single machines, flexible transfer lines, or complete machinery
- Highly automated SINUMERIK CNCs
- SIMATIC S7-based controls
- Integration of tool setting stations or cross-factory tool management systems.

## Benefits

- Clear overview of tool circulation makes it possible to cut tool costs.
- The modularity of the Manage MyTools modules permits optimized customer-oriented and demand-oriented application.
- Use scalable from a single machine up to a complete machine park.

## Function

All Manage MyTools functions are designed such that they can operate on a single machine or within networked, interconnected systems, e.g., they can display an overview of all actual tool data on a single machine or a central control system.

Scope of functions:

- Actual tool data
- Service life can be varied from 10 to 100 %
- Lock tool, tool details
- Import/export file interface
- Tool transfer

Thanks to the consistent design as a client-server solution and the use of communication mechanisms, it is possible to vary the distribution of the modules in the network and to access them from any position. This means up-to-date information can always be accessed wherever it is needed.

The Manage MyTools interfaces have been designed to run and operate both on a SINUMERIK platform (function keys) and on a PC platform (pull-down menus).

The following functions are available:

- Availability of actual tool data throughout the network
- Operator-prompted loading and unloading with TO data import from the tool setting station
- Planning of tool demand based on current magazine loading
- Statistical evaluations of tool use
- Interface client for connecting external tool management systems
- All available functions combined on a single server and network-wide operation of client-based interfaces
- Stand-alone non-network-compatible function package for tool planning and connection to tool setting stations

# SINUMERIK Integrate Manage-it!

## Manage MyTools

### Integration

#### Requirements:

- With SINUMERIK controls, it is assumed that the standard tool management option is installed. SINUMERIK controls without standard or machine-manufacturer-specific tool management can be configured as SIMATIC S7-based machines or must be connected specific to the project.
- In the case of controls from other vendors, the manageable tool data are reduced to a simplified tool data structure. A basic precondition is that the component must be Windows-based, the control must be accessible via Ethernet and the interface must be OPC-compatible
- If tools stored in tool cabinets are to be recorded and managed, a user interface for loading and unloading the tools (e.g., a Windows PC integrated in the network) must be assigned to the respective storage location

### Selection and ordering data

### Overview

The SINUMERIK Integrate NC program management module Manage MyPrograms allows NC programs to be organized and managed on a network-wide basis and reduces the costs of NC data organization.

As a result of the convenience of managing and archiving NC programs electronically, the latest program versions are always available to the machines throughout the entire production area. This is particularly relevant in production areas with a high degree of flexibility and variation and where NC data frequently change, for example in machining centers, special-purpose machines and flexible production lines.

### Overview (continued)

The NC program management module Manage MyPrograms consists of software modules which can be scaled to suit functional requirements.

SINUMERIK Integrate Manage MyPrograms is available as a software option with SINUMERIK Operate.

A license per node is available for PC systems and controls on which HMI-Advanced is installed. This license is required for each participating device (= node). In addition to the license per node, a data carrier for installing the software is also available.

### Benefits

- Costs of CNC data organization are reduced:
  - Convenient, central CNC program management which provides access to CNC programs and attachments, e.g. PDFs, images, etc.
  - Low organization overhead and simple handling eliminate the need for external data carriers for archiving CNC data
- Increase in machine operating times and reduction in setup times through fast, reliable supply of CNC programs
- Cost-effective and reliable electronic data archiving
- Automatic CNC data archiving of the SINUMERIK control
- Simple integration of many different types and generations of CNCs
- Direct connection of SINUMERIK PCU 50.5 with Windows via standard Industrial Ethernet network
- Easy CNC program import and export functions to/from Manage MyPrograms

### Overview

### Commissioning support and remote diagnostics with SINUMERIK Operate

SINUMERIK Integrate Access MyMachine /P2P supports the commissioning of machines with SINUMERIK Operate (software version 2.6 and higher) using a standard Windows PC. Its scope of functions includes the exchange of files between the service PC and the control as well as operation of the HMI user interface. The file exchange functionality permits access from the NCU to files stored on the CF card and to files in the NCK. Various user profiles are also supported.

The file exchange only requires the Access MyMachine /P2P software, which is installed on the PC.

If remote access, e.g. via modem, to the HMI user interface is required, the approved modem for this application is the TS Adapter IE (2 variants: analog or ISDN telecommunications networks).

### Benefits

Cost savings in service thanks to:

- Less frequent service calls for the machines
- More efficient deployment of on-site service personnel
- Better preparation of service calls

Machine availability is enhanced thanks to:

- Rapid online presence on site
- Rapid file transfer to and from the machine

### Function

- Remote control, monitoring and administration (Access MyMachine /P2P option required)
- File transfer to CF card and NC file system
- Connection is established following confirmation by the operator
- Status display on the operator panel
- Optional with teleservice software: Machine connections can be maintained centrally and access data administered via remote connections.

### Integration

The components can be connected via:

- Point-to-point connection in combination with TS Adapter IE (analog, ISDN modem)
- Ethernet in local networks (LAN and WLAN)
- Internet (VPN), taking account of local IT security regulations (IT Policy)

### Selection and ordering data

## Access-it!

### Access MyMachine /Ethernet

#### Overview

Access MyMachine /Ethernet enables worldwide, secure remote operation and monitoring of a machine tool automated with SINUMERIK.

The machine can be accessed remotely via Intranet (local network – LAN) or via the Internet (worldwide).

The following services are provided within Access MyMachine /Ethernet:

#### Remote desktop

This function allows remote operation and monitoring of the user interface of the control system. The user interface is not only accessible to the operator at the machine, but also to service personnel in cases where they are providing support from a remote location, for example.

#### File transfer

The File transfer function allows files to be copied into the archive system of the CNC. In addition, files can be transferred from the CNC's archive system to the remote desktop.

<sup>1)</sup> Including 6 hours of remote online time per machine and year.

## Overview

SINUMERIK Integrate Access MyTool ID is a software module for the SINUMERIK system which is designed to allow easy loading of tools with tool identification systems from the PLC. The tool data can be loaded from the tool cabinet or the code carrier to the control system, or vice versa.

## Benefits

- Free code parsing allows use of a broad variety of data carriers
- Various connection possibilities
- Use of low-cost read-only data media through addition of tool data via network
- Reduction of fault-prone manual inputs
- Transparent tool data because data are carried on the tool

## Function

- The following data carriers are supported depending on the type of connection and interface:
  - PROFIBUS/PLC: Balluff, Bilz, MOBY, barcode
  - RS232C interface of the SINUMERIK PCU: Balluff (BIS C-480 or BIS C-600), barcode
- Loading/unloading of tool data with/without searching for empty location
- Reading/writing tool and cutting edge data
- Creating/deleting tool in tool list
- Loading/unloading tool in tool cabinet
- Supplementing tool data on code carrier with saved tool data from the tool cabinet or list, e.g., when using read-only chips and barcode
- PLC interface for starting the write/read procedure, e.g. via OP 177B, key or limit switch, e.g. automatic execution of loading/unloading points with reading/writing on code carrier

## Integration

### Requirements:

- SINUMERIK 840D sl with SINUMERIK Operate

## Selection and ordering data

# SINUMERIK Integrate

## Analyze-it!

### Analyze MyCondition

#### Overview

Analyze MyCondition provides test cycles for equability, circularity and universal axis tests, and also offers functionality for continuous data acquisition during the production process. It also supports the reporting of parameters about wear and tear of mechatronic components. By employing a condition-oriented maintenance routine, you will keep your machines running longer as well as reduce downtimes and outages.

By means of standardized test procedures, Analyze MyCondition supports machine operators, maintenance technicians and service engineers with determining the machine condition and monitoring the wear on the machine over time. Through continuous evaluation of the condition of the machine tools, trends can be detected early and measures can be taken or planned on time. Individual machine components can also be monitored cyclically.

#### Benefits

- Designing and optimizing the maintenance measures for your machine
- Early spare parts disposition through status monitoring and analysis of machine components
- Provision of a planning service for your customers for preventative or condition-oriented maintenance measures

#### Integration

Requirement:

- SINUMERIK 840D sl with SINUMERIK Operate

SME120/SME125

##### Supplementary system components

DMC20  
DME20  
TM41  
TM120  
TM15

##### Power Modules

G\_NC01\_EN\_00523

### Overview (continued)

Control Units CU310-2 PN, CU320-2 PN, NCU 730.3 PN and Numeric Control Extension NX15.3 (from left)

#### Platform concept and Totally Integrated Automation

All SINAMICS versions are based on a platform concept. Joint hardware and software components, as well as standardized tools for design, configuration, and commissioning tasks ensure high-level integration across all components.

SINAMICS handles a wide variety of drive tasks with no system gaps. The different SINAMICS versions can be easily combined with each other.

SINAMICS is part of the Siemens "Totally Integrated Automation" concept. Integrated SINAMICS systems covering engineering, data management and communication at automation level, ensure low-effort solutions with the SINUMERIK, SIMOTION, and SIMATIC control systems.

#### All formats can be combined freely

The different formats of SINAMICS S120 can be combined freely thanks to their innovative drive architecture with DRIVE-CLiQ interfaces, e.g. Line Modules in chassis format can be freely combined with Motor Modules in booksize format for multi-axis applications with high total output.

SINAMICS S120 blocksize, booksize, and chassis formats

# SINAMICS S120 drive system

## Introduction

### Overview (continued)

#### Modular system toolbox for complex drive tasks

SINAMICS S120 solves demanding drive tasks for a wide range of industrial applications and is, therefore, designed as a modular system. Users can choose from many different harmonized components and functions to create a solution that best meets their requirements. The powerful SIZER for Siemens Drives engineering tool makes it easier to choose and determine the optimum drive configuration. This is possible due to the consistent subdivision of the drive in hardware and software function objects, which ensures that the power unit and Control Unit are isolated from each other.

The power units are selected in accordance with the requirements for energy consumption for the motion of the working machine and for exchange of energy with the power supply network. The Control Unit is selected in accordance with the number of drives to be controlled and the performance required. Communication between the Control Unit and power unit takes place very simply via the digital system interface DRIVE-CLiQ.

SINAMICS S120 is enhanced by a wide range of SIMOTICS motors. Whether synchronous or asynchronous, all motor types are supported by SINAMICS S120.

#### Particularly suitable for multi-axis applications

Coordinated drives that carry out a drive and motion task together are used in many mechanical and plant engineering applications. These require drives with a connected DC link, which allows cost-saving energy balancing between braking and driving axes.

SINAMICS S120 includes Line Modules (line infeed) and Motor Modules (inverters) for a wide performance range. Their format enables a contiguous installation for space-saving multi-axis drive configurations.

#### System architecture with a central Control Unit

Electronically coordinated single drives work together to perform the drive tasks. Higher-level computerized numerical controls such as SINUMERIK operate the drives to achieve the required coordinated movement. This requires cyclic data exchange between the CNC and all the drives. To solve this task, the SINAMICS S120 uses a central Control Unit that is designed as a higher-level drive controller for all connected axes.

Simple technological tasks can be carried out by the SINAMICS S120 Control Unit itself. For more complex numerical tasks, it is replaced by powerful modules from the SINUMERIK product range.

As well as motion control, coordinate transformation and logic functions, these products also integrate the SINAMICS drive control. The NCUs of SINUMERIK can be positioned in or alongside the SINAMICS S120 drive group and connected via DRIVE-CLiQ. In case of tasks that require a greater number of motion axes due to the machine kinematics, the system base units can be expanded with the additional Numeric Control Extensions NX10.3/NX15.3.

#### DRIVE-CLiQ – the digital interface between all components

All SINAMICS S120 drive system components, including the motors and encoders, are interconnected by a shared serial interface called DRIVE-CLiQ. The standardized cables and connectors reduce the variety of different parts and cut storage costs.

Sensor Modules (converter boards) for converting standard encoder signals to DRIVE-CLiQ are available for motors and encoders without a DRIVE-CLiQ interface or for retrofitting applications. DRIVE-CLiQ cables are designed to allow decentralized attachments up to 100 m (328 ft).

#### Swift and automatic: The electronic rating plate

All SINAMICS S120 components with a DRIVE-CLiQ interface have an electronic rating plate. This rating plate contains all the relevant data about that particular component. For motors, for example, these data include the parameters of the electric equivalent circuit diagram and characteristic values for the built-in motor encoder. The Control Unit records this component-specific data automatically via DRIVE-CLiQ so that it does not need to be entered during commissioning or when the equipment is replaced.

In addition to the technical specifications, the rating plate includes logistical data (manufacturer ID, order number, and globally unique ID). Since this data can be called up electronically on site or remotely, all the components used in a machine can always be individually identified, which helps simplify servicing.

The following overview features the SINAMICS S120 components that are primarily used for multi-axis drive tasks.

### Overview (continued)

#### Control Units

CU310-2 PN, CU310-2 DP, CU320-2 PN,  
CU320-2 DP, NCU 730.3 PN, Numeric Control Extension NX15.3

#### Control Units for drive control in SINUMERIK, the Numeric Control Extensions NX and the CU320-2

##### SINAMICS S120 Control Unit CU320-2

These central Control Units can be used to create links between individual drives and implement simple technology functions.

The CU320-2 Control Unit has been designed to control multiple drives. With the SINUMERIK, up to 6 drives can be operated in servo control mode on one Control Unit.

The Control Units in the SINUMERIK CNCs are available in various rating classes for implementing coordinated motion control in a multi-axis interpolation grouping on machine tools:

#### SINUMERIK 840D sl

- NCU 710.3 PN/NCU 720.3 PN/NCU 730.3 PN with integrated drive control for up to 6 axes
- Numeric Control Extensions NX10.3/NX15.3 for extended control of up to 3/6 axes

Commissioning and diagnosis of the various Control Units in combination with the power components is performed in combination with the SINUMERIK using the drive wizard of the SinuCom NC commissioning tool. Alternatively, the drive can be commissioned using the STARTER commissioning tool.

For further information about STARTER, see Engineering software.

#### Motor Modules

The Motor Modules are the final controlling element for the motor and feature a DC link that is fed from a DC voltage and, as an output, an inverter for feeding the motor.

Line Module and three Motor Modules in booksize format

Motor Modules are designed for multi-axis drives and are controlled by a SINUMERIK NCU or a CU320 Control Unit. The Motor Modules are interconnected through a common DC bus. Since the Motor Modules share the same DC link, they can exchange energy with one another, i.e. if one Motor Module operating in generator mode produces energy, the energy can be used by another Motor Module operating in motor mode. The DC link is supplied from the line voltage by a Line Module.

### Overview (continued)

#### Line Modules

Line Modules generate a DC voltage from the line voltage and supply Motor Modules with energy via the voltage-source DC link. The SINAMICS S120 range contains the following types of Line Modules:

##### Smart Line Modules

Smart Line Modules can feed energy to the DC link of a drive group through a non-stabilized converter and also feed back the generated excess energy into the power supply system. The line voltage variations are mirrored proportionately in the DC link voltage. Braking Modules and braking resistors are required only if the drives need to be decelerated in a controlled manner for island supply systems or after a power failure (i.e. when energy cannot be recovered to the supply). When a Smart Line Module is used as the infeed, the matching line reactor must be installed. A line filter can be installed optionally to restrict the interference voltage level to EN 61800-3 Class C2 limits.

##### Active Line Modules

Active Line Modules can supply energy to the DC link rail and return regenerative energy to the supply system. In contrast to Smart Line Modules, Active Line Modules generate a regulated DC voltage which remains constant despite fluctuations in the line voltage. In this case, the line voltage must remain within the permissible tolerance range. Braking Modules and braking resistors are required only if the drives need to be decelerated in a controlled manner even after a power failure (when energy cannot be recovered to the supply). Active Line Modules draw a virtually sinusoidal current from the supply which virtually rules out any harmful harmonics. It is essential that the Active Interface Module matched to the output type is used (block diagram, see Active Line Modules in chassis format).

##### Active Line Modules in chassis format

All the components required to operate an Active Line Module are integrated in the Active Interface Module. An external bypass contactor is required in addition for sizes HX and JX.

#### Power Modules

The simplest version of a SINAMICS S120 drive system consists of a CU310-2 Control Unit and a Power Module. A mains rectifier, a voltage-source DC link and an inverter for supplying a motor are integrated in the Power Module.

Power Module in blocksize format with CU310-2 PN Control Unit

Power Modules are designed for single drives which are not capable of regenerating energy to the supply. Generated energy produced during braking is converted to heat via braking resistors.

Power Modules can also be operated by a CU320-2 Control Unit or a drive control integrated in SINUMERIK, e.g. in configurations where a single drive has been added to a multi-axis drive group. In this case, the Power Modules in blocksize format must be equipped with the CUA31 Control Unit Adapter. This is connected with the CU320-2 Control Unit or the NCU in SINUMERIK using DRIVE-CLiQ. Power Modules in chassis format are directly connected to the Control Unit using a DRIVE-CLiQ cable.

The following versions are available:

- Motor Modules and Line Modules in booksize and chassis formats
- Power Modules in blocksize and chassis formats
- Motor Modules in booksize compact format
- SINAMICS S120 Combi

# SINAMICS S120 drive system

## Introduction

### Overview (continued)

#### Booksize format

Booksize format units are optimized for multi-axis applications and are mounted adjacent to one another. The connection for the common DC link is an integral feature.

With respect to control cabinet cooling, SINAMICS S120 in booksize format offers a number of highly effective options. Depending on the application, component heat loss can be transferred to the environment using three different heat dissipation methods. The design of the components differs only in the format of the backplane and the location of the external fan module. The front panel (where the connections are located) and the width of the components are common to all designs.

#### Internal air cooling

In this standard solution, the power loss from the electronics and power units of the drive components is removed by natural cooling or by a forced-ventilation system and routed to the interior of the control cabinet.

#### External air cooling

External air cooling uses the through-hole technology. The components' power unit heat sinks pass through the mounting surface in the control cabinet and can thus dissipate the heat losses of the power circuit to a separate external cooling circuit. Degree of protection IP54 can be achieved at this "mechanical interface" - the external heat sink. The heat sink, with its cooling fins and the fan module (part of the scope of supply), protrudes through the back into a separate ventilation duct, which can also be open to the outside. The only heat loss that remains in the cabinet is largely emitted by the electronics.

#### Cold plate cooling

Units designed with cold-plate cooling can pass the power unit heat losses to an external heat sink via a thermal interface on the unit's rear panel. This external heat sink is water-cooled, for example.

#### Liquid cooling

For liquid cooling, the power semiconductors are mounted on a heat sink, through which cooling medium flows. The power loss of the device is, to large extent, absorbed by the cooling medium and can be dissipated outside the cabinet.

#### Chassis format

Higher-output units (approximately 100 kW and above) are constructed in chassis format. These devices are available as Line Modules and Motor Modules. Chassis format units are cooled by an internal air cooling circuit.

### Overview (continued)

#### Blocksize format

The units in blocksize format are optimized for single-axis applications.

The CU310-2 DP/CU310-2 PN Control Units or CUA31 Control Unit Adapters can be snapped on directly. The units are cooled by an internal air cooling circuit.

Power Module with CU310-2 PN Control Unit plugged in

#### SINAMICS S120 Combi

SINAMICS S120 Combi is a very compact and rugged drive system for compact turning and milling machines.

The prerequisite for operation of the SINAMICS S120 Combi is a NCU 710.3 PN.

SINAMICS S120 Combi integrates a line infeed with regenerative feedback capability, power units for spindle and feed motors as well as a TTL encoder interface into a single Power Module.

Special features are the minimum space requirement in the control cabinet, low energy requirement thanks to state-of-the-art 400-V technology, and perfected expendability using additional Motor Modules in booksize compact format.

The expansion using Motor Modules in booksize compact format is only permissible in combination with a NCU 710.3 PN and the SINAMICS S120 Combi (SINUMERIK 840D sl BASIC).

An intelligent DRIVE-CLiQ interface is provided for cabling.

## Introduction

### Overview (continued)

#### **Additional system components**

The structure of the drive system is defined by the selected Control Unit, Line Module, and Motor Modules or Power Module. An optimal solution can be obtained for the drive task using these system components.

**Additional system components** can be installed to expand the system's scope of functions and adapt it perfectly to the drive task in question.

System components are divided into the following categories:

- **DC link components**  
e.g. Braking Modules and braking resistors  
Further DC link components are optionally installed to stabilize the DC link voltage and/or to support the electronic power supply.
- **Additional system components**  
e.g. Terminal Modules for expanding the I/O interfaces to the machine interface
- **Encoder system connection**  
for connecting various types of encoders to SINAMICS S120
- **Line-side power components**  
such as fuses, contactors, reactors, and filters for switching the power supply and meeting EMC requirements

#### **Energy efficiency**

The SINAMICS S120 drive system saves energy by recovering energy from the axes and using it within the DC link group of a multi-axis configuration and by feeding it back into the supply system. Even at full infeed capacity, no unnecessary heat is generated in the control cabinet. With intelligent compensation of capacitive and inductive reactive currents, SINAMICS S120 also ensures that no unnecessary power losses occur in the power supply and that no current harmonics occur. This not only prevents detrimental effects on other loads, but it also reduces the heat generated in the control cabinet.

#### **The SINAMICS S120 components have been developed for installation in cabinets**

They have the following features and characteristics:

- Ease of handling
- Simple assembly and wiring
- Practical connection system, cable routing in accordance with EMC requirements
- Uniform design
- Contiguous assembly
- Various cooling solutions

#### **Rugged units**

The SINAMICS units are equipped as standard with varnished or partially varnished modules for enhanced robustness.

The coating on the modules protects the sensitive SMD components against corrosive gases, chemically active dust and moisture.

### Technical specifications

Unless specified otherwise, the following Technical specifications are valid for all the following components of the SINAMICS S120 drive system.

|                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

# SINAMICS S120 drive system

## Introduction

### More information

For satisfactory and reliable operation of the drive system, original components of the SINAMICS system in conjunction with the original Siemens accessories as described in this Catalog and the Configuration Manuals, in the functional descriptions or user manuals should be used.

The user must observe the configuring instructions.

Combinations that differ from the configuring instructions (also in conjunction with non-Siemens products) require a special agreement.

If no original components are used, for example for repairs, approvals such as UL, EN, Safety Integrated, etc. can become invalid and thus the operation authorization for the machine with the non-Siemens components installed becomes invalid.

All of the approvals, certificates, declarations of conformity, test certificates, e.g. CE, UL, Safety Integrated etc. have been performed with the associated system components as they are described in the Catalogs and Configuration Manuals. The certificates are only valid if the products are used with the described system components, are installed according to the Installation Guidelines and are used for their intended purpose. In other cases, the vendor of these products is responsible for arranging that new certificates are issued.

### Overview

#### What is PROFIBUS?

PROFIBUS is the most successful open fieldbus used for automation technology which can be used for a wide range of applications. Standardization according to IEC 61158/EN 50170 secures your investments for the future.

PROFIBUS defines the technical and functional features of a serial fieldbus system, with which the distributed field automation devices in the lower area (sensor/actuator level) can be networked up to the mid performance range (cell level).

The requirements of users for an open, non-proprietary communication system have resulted in the specification and standardization of the PROFIBUS protocol.

#### Multi-vendor installations

Using the conformity and interoperability test performed by the test laboratories authorized from PROFIBUS & PROFINET International (PI) and the certification of the devices by PI, users have the security that the quality and functionality is guaranteed, even in multi-vendor installations.

#### PROFIBUS versions

**PROFIBUS FMS (Fieldbus Message Specification)**  
The universal solution for communication tasks on the field and cell level of the industrial communication hierarchy.

**PROFIBUS PA (Process Automation)**  
The version for applications in process automation. PROFIBUS PA uses intrinsically secure data transfer technology defined in IEC 61158-2.

**PROFIBUS DP (Distributed Peripherals)**  
This version, which is optimized for speed, is tailored especially for the communication of automation systems with distributed I/O stations and drives. The outstanding features of PROFIBUS DP are

- very short response times
- high interference immunity

PROFIBUS DP replaces cost-intensive parallel signal transmission with 24 V and the measured value transmission with 0 mA or 4 mA to 20 mA technology.

#### PROFIBUS and SINAMICS

SINAMICS uses the PROFIBUS protocol PROFIBUS DP.

### Design

#### Bus nodes

PROFIBUS DP distinguishes between two different master classes and one slave class:

##### DP master Class 1

For PROFIBUS DP, DP master Class 1 is the central component. In a defined message cycle that always repeats itself, the central master station exchanges information with distributed stations (DP slaves).

##### DP master Class 2

When commissioning, to configure the DP system, for diagnostics or to operate the plant or system in operation, devices of this type are used (programming, configuring or operator control devices). A DP master Class 2 can be used, for example, to read the input, output, diagnostic and configuration data of the slaves.

##### DP slave

A DP slave is an I/O device, which receives output information or setpoints from the DP master, and as response, returns input information, measured values and actual values to the DP master. A DP slave never sends data automatically, but only when requested by the DP master.

The quantity of input and output information depends on the device, and for each DP slave in each send direction can be a maximum of 244 bytes.

# SINAMICS S120 drive system

## Communication

### PROFIBUS

#### Function

##### *Functions on PROFIBUS DP*

The functional scope can differ between DP masters and DP slaves. The functional scope is different for DP-V0, DP-V1 and DP-V2.

##### DP-V0

The DP master functions (DP-V0) comprise the functions "Configuration", "Parameter assignment", "Read diagnostic data" as well as "Cyclic reading of input data/actual values" and "Writing output data/setpoints".

##### DP-V1

The additional DP function expansions (DP-V1) make it possible to perform acyclic read and write functions as well as processing cyclic data communication. This type of slave must be supplied with extensive parameterization data during start-up and during normal operation. These acyclically transferred parameterization data are only rarely changed in comparison to the cyclic setpoints, actual values, and measured values, and are transferred at lower priority in parallel with the cyclic high-speed user data transfer. Detailed diagnostic information can be transferred in the same way.

##### DP-V2

The extended DP master functions (DP-V2) mainly comprise functions for isochronous operation and direct data exchange between DP slaves.

Isochronous mode is implemented by means of a signal with a constant bus cycle for the bus system. This cyclic, equidistant cycle is sent by the DP master to all bus nodes in the form of a Global Control Telegram. Master and slaves can then synchronize their applications with this signal. The jitter of the clock signal from cycle to cycle is less than 1  $\mu$ s.

The "publisher/subscriber model" is used to implement slave-to-slave communication. Slaves declared as publishers make their input data/actual values and measured values available to other slaves, the subscribers, for reading. This is performed by sending the response frame to the master as a broadcast. Slave-to-slave communication is therefore a cyclic process.

##### *SINAMICS and PROFIBUS DP*

The SINAMICS S120 drive system can operate only as a DP slave and supports all communication functions, i.e. DP-V0, DP-V1 and DP-V2.

##### *SINUMERIK and PROFIBUS DP*

The SINUMERIK 840D sl control system functions as the DP master for drive axes and supports all DP-V0, DP-V1 and DP-V2 communication functions. SINAMICS S120 drives as well as distributed hydraulic axes can be linked as slaves to these systems. The decentralized hydraulic axes can only be used with isochronous PROFIBUS.

### Overview

PROFINET is the innovative, open Industrial Ethernet standard (IEC 61158) for the industrial automation environment. With PROFINET, devices can be linked up from the field level through to the management level.

PROFINET enables system-wide communication, supports plant-wide engineering and applies IT standards right down to the field level. IT communication, data communication and cyclic process communication are combined on the basis of Industrial Ethernet.

Existing fieldbus systems such as PROFIBUS can also be simply integrated without having to change existing devices.

#### Your advantages at a glance

| Flexibility                                                                                                                                                                                         | Efficiency                                                                                                                                                                                                                                   | Performance                                                                                                                                                                                                     |

### Design

#### PROFINET device concept

PROFINET distinguishes between the controller and its assigned devices. These are initialized and parameterized by the controllers on power-up. The controller and its devices together constitute a PROFINET I/O system (compare master/slave system for PROFIBUS).

For PROFINET, cyclic communication between an IO Controller and its IO Devices is performed in the same way as for PROFIBUS over the process image. The process image is updated cyclically. Depending on the requirements and device characteristic, this takes place in real-time (RT, devices are typically distributed IO Devices) or isochronous real-time (IRT, devices are typically servo drives). Further, PROFINET permits communication between the controllers and devices of different IO systems.

#### PROFINET IO with RT for simple standard drive applications

With typical cycle times between 4 ms and 10 ms, PROFINET IO with RT offers the same performance characteristics as PROFIBUS as regards cyclic data transmission.

With this performance level, all standard drive applications belonging to PROFIdrive application categories 1 to 3 can be automated, i.e. those categories requiring the specification of speed, torque and current setpoints or target positions which do not need to be linked isochronously.

# SINAMICS S120 drive system

## Communication

### PROFINET

#### Design

##### PROFINET IO with IRT for Motion Control<sup>1)</sup>

In this case, a Motion Control system controls or synchronizes axes using the PROFINET network. This requires cyclic, isochronous data exchange with the drives. PROFINET IO with IRT fulfills this requirement. The communication cycle is subdivided into different, time-specific channels for this purpose. The first channel is used for isochronous real-time communication (IRT), followed by real-time communication (RT) and standard TCP/IP communication. By appropriately configuring the application, e.g. a synchronous relationship between axes, IRT telegrams are implicitly determined and the appropriate configuration data generated.

The optimum time sequence of the individual messages for each network section is calculated with a special algorithm which takes the topology into account. This means that the switch is in a position to transfer the IRT telegrams without delay from the input port to the defined output port and then to the target device.

##### Transition from PROFIBUS to PROFINET

The functional interface between the controller and the SINAMICS drives for PROFINET and PROFIBUS is defined by the PROFIdrive V4 of PROFIBUS International. It is not necessary to change an user program for transfer from PROFIBUS to PROFINET.

PROFINET with PROFIdrive

#### Design (continued)

##### Motion Control concepts with PROFINET

With SINAMICS, PROFINET supports the implementation of different automation structures. Distributed drive-based motion control concepts or central architectures with a control are supported in the same way as distributed automation solutions with modular automation components.

##### PROFINET – interface on SINAMICS

- SINAMICS S120 with a CU320-2 DP Control Unit and a CBE20 Communication Board  
The CU320-2 DP Control Unit on SINAMICS S120 is linked to the PROFINET IO network via the CBE20 Communication Board.
- SINAMICS S120 with a CU320-2 PN Control Unit  
The CU320-2 Control Unit on SINAMICS S120 is linked to the PROFINET IO network via the on-board PROFINET interface.
- SINAMICS S120 with a CU320-2 PN Control Unit and a CBE20 Communication Board  
The CU320-2 PN Control Unit on SINAMICS S120 is linked to the PROFINET IO network via the CBE20 Communication Board.
- SINAMICS S120 with a CU310-2 PN Control Unit  
The CU310-2 PN Control Unit on SINAMICS S120 is linked to the PROFINET IO network via the on-board PROFINET interface.

#### Function

##### Real-time communication with PROFINET IO

PROFINET uses standard TCP/IP for parameter assignment, configuration and diagnostics. Real-time communication for the transmission of process data is performed on the same line. PROFINET IO has the following real-time features:

- Real Time (RT)  
uses the option of prioritizing the communication stack of the bus nodes. This permits high-performance data transmission based on standard network components.
- Isochronous Real-Time (IRT)  
permits strict deterministic, cyclic data transmission with short response times and minimum jitter for high performance motion control applications. This feature is implemented with a special ASIC, named ERTEC (Enhanced Real Time Ethernet Controller), in the corresponding interfaces (switch integrated into device) or network components (switch).

##### Automation with PROFINET

With these and other features, PROFINET fulfills all automation requirements: Industry-compatible installation technology, real-time capability, deterministic responses, integration of distributed field devices, simple network administration and diagnosis, protection against unauthorized access, efficient vendor-independent engineering as well as isochronous motion control applications.

PROFINET relies on switch technology and has expanded this technology for real-time applications (IRT). This has the advantage that the network topology can be optimally utilized, since it can be adapted to the requirements of the machine. Collisions are avoided and therefore optimum data flow rates achieved.

## Engineering software

### SIZER for Siemens Drives engineering tool

#### Overview

The following drives and controls can be engineered in a user-friendly way using the SIZER for Siemens Drives engineering tool:

- SINAMICS Low Voltage, MICROMASTER 4 and DYNAVERT T drive systems
- Motor starters
- SINUMERIK CNC system
- SIMOTION Motion Control System
- SIMATIC Technology

It provides technical support when selecting the hardware and firmware components necessary to implement a drive task. SIZER for Siemens Drives covers the full range of operations required to configure a complete drive system, from simple single drives to complex multi-axis applications.

SIZER for Siemens Drives supports all of the configuring steps in a workflow:

- Configuring the power supply
- Designing the motor and gearbox, including calculation of mechanical transmission elements
- Configuring the drive components
- Compiling the required accessories
- Selecting the line-side and motor-side power options, e.g. cables, filters, and reactors

When SIZER for Siemens Drives was being designed, particular importance was placed on a high degree of usability and a universal, function-based approach to the drive application. The extensive user guidance makes using the tool easy. Status information keeps you continually informed about the progress of the configuration process.

The SIZER for Siemens Drives user interface is available in English, French, German and Italian.

#### Overview (continued)

The drive configuration is saved in a project. In the project, the components and functions used are displayed in a hierarchical tree structure.

The project view permits the configuration of drive systems and the copying/inserting/modifying of drives already configured.

The configuration process produces the following results:

- A parts list of the required components (export to Excel, use of the Excel data sheet for import to SAP)
- Technical specifications of the system
- Characteristics
- Comments on system reactions
- Mounting arrangement of drive and control components and dimension drawings of motors
- Energy requirements of the configured application

These results are displayed in a results tree and can be reused for documentation purposes.

Technological online help is available:

- Detailed technical specifications
- Information about the drive systems and their components
- Decision-making criteria for the selection of components
- Online help in German, English, French, Italian, Chinese and Japanese

#### System requirements

- PG or PC with Pentium III min. 800 MHz (recommended > 1 GHz)
- 512 MB RAM (recommended 1 GB RAM)
- At least 4.1 GB of free hard disk space
- An additional 100 MB of free hard disk space on the Windows system drive
- Screen resolution 1024 × 768 pixels (recommended 1280 × 1024 pixels)
- Operating system:
  - Windows XP Home Edition SP2
  - Windows XP Professional 32 bit SP2
  - Windows XP Professional 64 bit SP2
  - Windows Vista Business
  - Windows 7 Ultimate 32 bit
  - Windows 7 Professional 32 bit
- Microsoft Internet Explorer V5.5 SP2

#### Selection and ordering data

## Engineering software

### STARTER commissioning tool

#### Overview

The user-friendly STARTER commissioning tool can be used for:

- Commissioning
- Optimization
- Diagnostics

This software can be operated either as a standalone PC application, integrated in SIMATIC STEP 7 with TIA compatibility via Drive ES Basic, or it can be integrated into the SCOUT engineering system (for SIMOTION). The basic functions and handling are the same in both cases.

In addition to the SINAMICS drives, the STARTER also supports MICROMASTER 4 devices.

The project wizards can be used to create the drives within the structure of the project tree.

Beginners are supported by solution-based dialog guidance, whereby a standard graphics-based display maximizes clarity when setting the drive parameters.

First commissioning is guided by a wizard which makes all of the basic settings in the drive. Therefore, getting a motor up and running is merely a question of setting a few of the drive parameters as part of the drive configuration process.

The individual settings required are made using graphics-based parameterization screens, which also precisely visualize the principle of operation of the drive.

Examples of individual settings that can be made include:

- How terminals are used
- Bus interface
- Setpoint channel (e.g., fixed setpoints)
- Closed-loop speed control (e.g., ramp-function generator, limits)
- BICO interconnections
- Diagnostics

For experts, the expert list can be used to specifically and quickly access individual parameters at any time. An individual compilation of frequently used parameters can be saved in dedicated user lists and watch tables.

#### Overview (continued)

In addition, the following functions are available for optimization purposes:

- Self-optimization of the controller settings (depending on drive unit)
- Trace  
depending on the drive device, this is not supported for
  - MICROMASTER 4
  - SINAMICS G110
  - SINAMICS G120 < firmware V4.4
  - SINAMICS G110D
  - SINAMICS G120D

Diagnostics functions provide information about:

- Control/status Words
- Parameter status
- Conditions of use
- Communication states

#### Performance features

- User-friendly: Only a small number of settings need to be made for successful first commissioning: The motor starts to rotate
- Solution-oriented dialog-based user guidance simplifies commissioning
- Self-optimization functions reduce manual effort for optimization

#### System requirements V4.2 and higher

- PG or PC Pentium III min. 1 GHz (recommended > 1 GHz)
- 1 GB RAM (recommended 2 GB RAM)
- Screen resolution 1024 × 768 pixels, 16-bit color depth
- Free hard disk memory min. 3 GB
- Operating system:
  - Windows 2000 SP4
  - Windows 2003 Server SP2
  - Windows 2008 Server
  - Windows XP Professional SP3
  - Windows 7 Professional 32 bit
  - Windows 7 Ultimate 32 bit
- Microsoft Internet Explorer V6.0 and higher

#### Selection and ordering data

### CU310-2 Control Unit for single-axis drives

#### Overview

CU310-2 PN and CU310-2 DP Control Units

The CU310-2 Control Unit that is designed for the communication and open-loop/closed-loop control functions of a SINAMICS S120 (AC/AC) is combined with the PM340 Power Module to create a powerful single-axis drive. A PROFINET (PN) variant and a PROFIBUS (DP) variant are available for fieldbus communication.

#### Design

The CU310-2 Control Unit features the following interfaces as standard:

- Fieldbus interface
  - CU310-2 PN: 1 PROFINET interface with 2 ports (RJ45 sockets) with PROFIdrive V4 profile
  - CU310-2 DP: 1 PROFIBUS interface with PROFIdrive V4 profile
- 1 DRIVE-CLiQ socket for communication with the DRIVE-CLiQ motor or other DRIVE-CLiQ nodes (e.g. Sensor Modules or Terminal Modules<sup>1)</sup>)
- 1 encoder evaluation for evaluating the following encoder signals
  - Incremental encoder TTL/HTL
  - SSI encoder without incremental signals
- 1 PE (protective earth) connection
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 temperature sensor input (KTY84-130 or PTC)
- 3 parameterizable, fail-safe (can be used with firmware V4.5 and higher) digital inputs (isolated) or alternatively 6 parameterizable digital inputs (isolated).  
The fail-safe digital inputs can be routed, i.e. they can be routed via PROFIsafe to a higher-level controller.
- 5 parameterizable digital inputs (isolated)
- 1 parameterizable, fail-safe (can be used with firmware V4.5 and higher) digital output (isolated) or alternatively 1 digital output (isolated)
- 8 parameterizable bidirectional digital inputs/outputs (non-isolated)
- 1 analog input:  $\pm 10$  V, resolution 12 bit + sign
- 1 Ethernet interface (socket RJ45) for commissioning and diagnostics
- 1 slot for the CompactFlash card on which firmware and parameters are stored
- 1 PM-IF interface for communication with the Power Modules in blocksize format
- 3 test sockets and one reference ground for commissioning support
- 1 interface for the BOP20 Basic Operator Panel<sup>2)</sup>

#### Design (continued)

The status of the CU310-2 Control Unit is indicated via multi-color LEDs.

As the firmware and parameter settings are stored on a plug-in CompactFlash card, the Control Unit can be changed without the need for software tools.

#### Integration

The CU310-2 Control Unit drives Power Modules in blocksize format via the PM-IF interface. DRIVE-CLiQ motors or Sensor Modules (SMC) can also be connected to the integrated DRIVE-CLiQ socket to permit the operation of motors without a DRIVE-CLiQ interface.

The CU310-2 Control Unit and other connected components are commissioned and diagnosed with the STARTER commissioning tool. The CU310-2 Control Unit requires a CompactFlash card with firmware V4.4 or higher.

A CU310-2 PN Control Unit communicates with the higher-level control system using PROFINET IO and the PROFIdrive V4 profile.

The SINAMICS S120 drive system with the CU310-2 PN Control Unit then assumes the function of a PROFINET IO device and can perform the following functions:

- PROFINET IO device
- 100 Mbit/s full duplex
- Supports real-time classes of PROFINET IO:
  - RT (Real-Time)
  - IRT (Isochronous Real-Time), minimum send cycle 500  $\mu$ s
- Connects to controls as PROFINET IO devices using PROFIdrive compliant with Specification V4
- Standard TCP/IP communication for engineering processes using the STARTER commissioning tool
- Integrated 2-port switch with two RJ45 sockets based on the ERTEC ASIC. The optimum topology (line, star, tree) can therefore be configured without additional external switches.

An external 24 V power supply can be connected to the CU310-2 Control Unit to power it when the power connection for the Power Module is not occupied. The CU310-2 Control Unit then requires a CompactFlash card with firmware V4.5 or higher.

<sup>1)</sup> Only for use with SINAMICS S120 drive solutions without SINUMERIK.

<sup>2)</sup> BOP20 is not used on machine tools.

# SINAMICS S120 drive system

## Control Units

### CU310-2 Control Unit for single-axis drives

#### Integration (continued)

- 1) Motor temperature sensor input must be shielded.
- 2) Inversion can be parameterized.
- 3) Jumper open, isolation for digital inputs (DI)
- 4) High-speed inputs must be shielded.
- 5) Analog input must be shielded.
- 6) Safety-related control with current sourcing and current sinking outputs.
- 7) Safety-related control with two current sourcing outputs.
- 8) In order to use the digital outputs, an external 24 V power supply must be connected to terminal X124.

## Control Units

### CompactFlash card for CU310-2

#### Overview

The CompactFlash card contains the firmware and parameter settings. The CompactFlash card is plugged into the appropriate slot on the CU310-2 Control Unit.

#### Design

A CU310-2 Control Unit can perform the communication, open-loop and closed-loop control functions for one Power Module. The performance expansion is not required in this case.

In addition to the firmware, the CompactFlash card also contains licensing codes which are required to enable firmware options (Safety Integrated Extended Functions in the current version). The Safety Integrated Extended Functions must be ordered via the order code **F01** in addition to the Order No.

The firmware option can also be enabled on-site, for example, if the Safety Integrated Extended Functions are to be enabled retrospectively. You will need the serial number of the CompactFlash card and the Order No. of the firmware option to be enabled. With this information, you can purchase the associated license code from a license database and enable the firmware option. The license code is only valid for the CompactFlash card declared and cannot be transferred to other CompactFlash cards.

## Control Units

### CU320-2 Control Unit

#### Overview

The communication, open-loop and closed-loop control functions for one or more Motor Modules and the Line Module are executed in a CU320-2 Control Unit. The CU320-2 Control Unit is designed fundamentally for multi-axis operation.

#### Design

The CU320-2 Control Unit features the following interfaces as standard:

- 4 DRIVE-CLiQ sockets for communication with other DRIVE-CLiQ nodes, e.g., Motor Modules, Active Line Modules, Sensor Modules, Terminal Modules<sup>1)</sup>
- CU320-2 PN: 1 PROFINET interface with 2 ports (RJ45 sockets) with PROFINET V4 profile
- CU320-2 DP: 1 PROFIBUS interface with PROFINET V4 profile
- 12 parameterizable digital inputs (isolated)
- 8 parameterizable bidirectional digital inputs/digital outputs (non-isolated)
- 1 serial RS232 interface
- 1 interface for the BOP20 Basic Operator Panel<sup>2)</sup>
- 1 slot for the CompactFlash card on which firmware and parameters are stored
- 1 slot for mounting an option module (e.g. TB30 Terminal Board)
- 2 rotary coding switches for manually setting the PROFIBUS address
- 1 Ethernet interface for commissioning and diagnostics
- 3 test sockets and one reference ground for commissioning support
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 PE/protective conductor connection
- 1 ground connection

A shield connection for the signal cable shield on the option module is located on the CU320-2 Control Unit.

The available option slot is used to expand the interfaces, for example, to include additional terminals or for communication purposes.

The status of the CU320-2 Control Unit is indicated via multi-color LEDs.

As the firmware and parameter settings are stored on a plug-in CompactFlash card, the Control Unit can be changed without the need for software tools.

The CU320-2 Control Unit can be mounted on the side of the Line Module in booksize format via brackets integrated in a Line Module. The CU320-2 Control Unit can also be fixed to the wall of the control cabinet using the integrated fixing lugs. As the CU320-2 Control Unit is not as deep as a Line Module, suitable spacers are available to increase the depth of the CU320-2 Control Unit to 270 mm (10.63 in).

#### Integration

DRIVE-CLiQ components, for example, Motor Modules and Active Line Modules, can be connected to a CU320-2 Control Unit. The number of modules depends on the performance required, including duty type and additional functions.

The CU320-2 Control Unit and other connected components are commissioned and diagnosed with the STARTER commissioning tool.

The CU320-2 Control Unit requires a CompactFlash card with firmware V4.4 or higher.

The CU320-2 DP Control Unit requires a CompactFlash card with firmware V4.3 or higher.

<sup>1)</sup> Only for use with SINAMICS S120 drive solutions without SINUMERIK.

<sup>2)</sup> BOP20 is not used on machine tools.

## Control Units

### CompactFlash card for CU320-2

#### Overview

The CompactFlash card contains the firmware and parameter settings. The CompactFlash card is plugged into the appropriate slot on the CU320-2 Control Unit.

#### Design

A CU320-2 Control Unit can perform the communication, open-loop and closed-loop control functions for several Motor Modules. The computing capacity requirement increases in proportion to the number of connected Motor Modules and system components and in relation to the dynamic response required. The performance expansion is required for the CU320-2 Control Unit for 4 axes or more. The utilization of the CU320-2 Control Unit can be calculated with the SIZER for Siemens Drives engineering tool.

In addition to the firmware, the CompactFlash card also contains licensing codes which are required to enable firmware options (the performance expansion and the Safety Integrated Extended Functions in the current version). The Safety Integrated Extended Functions must be enabled retrospectively. You will need the serial number of the CompactFlash card and the Order No. of the firmware option to be enabled. With this information, you can purchase the associated license code from a license database and enable the firmware option. The license code is only valid for the CompactFlash card declared and cannot be transferred to other CompactFlash cards.

The firmware options can also be enabled on-site, for example, if the performance expansions required are not known at the time of placing the order or the Safety Integrated Extended Functions must be enabled retrospectively. You will need the serial number of the CompactFlash card and the Order No. of the firmware option to be enabled. With this information, you can purchase the associated license code from a license database and enable the firmware option. The license code is only valid for the CompactFlash card declared and cannot be transferred to other CompactFlash cards.

# SINAMICS S120 drive system

## Booksize format – Line Modules

### Smart Line Modules

#### Overview

Smart Line Modules are stall-protected, line-commutated in-feed/regenerative feedback units (diode bridge for incoming supply; stall-protected, line-commutated regenerative feedback via IGBTs) with 100 % continuous regenerative feedback power. The regenerative feedback capability of the modules can be deactivated via a digital input (Smart Line Modules 5 kW and 10 kW) or by parameter setting (Smart Line Modules 16 kW and 36 kW). Smart Line Modules are designed for connection to grounded, star (TN, TT) and non-grounded, symmetrical IT supply systems.

The DC link is pre-charged via integrated pre-charging resistors.

The associated line reactor is absolutely essential for operating a Smart Line Module.

#### Design

Smart Line Modules in booksize format feature the following interfaces as standard:

- 1 power connection via screw-type terminals
- 1 connection for the 24 V DC electronic power supply via the 24 V terminal adapter included in the scope of supply
- 1 DC link connection via integrated DC link busbars
- 2 PE/protective conductor connections
- 2 digital outputs (only on 5 kW and 10 kW Smart Line Modules)
- 1 digital output (only on 5 kW and 10 kW Smart Line Modules)
- 3 DRIVE-CLiQ sockets (only on 16 kW and 36 kW Smart Line Modules)

The status of the Smart Line Modules is indicated via two multi-color LEDs.

The signal cable shield can be connected to the Line Module by means of a shield terminal, e.g. type KLBÜ 3-8 SC by Weidmüller.

<sup>1)</sup> Smart Line Modules 16 kW (18 HP) and 36 kW (40 HP) in booksize format with firmware version V2.5 or higher with appropriate parameterization and reduced power rating are also operable on networks with 200 ... 240 V 3 AC  $\pm 10$  %.

<sup>2)</sup> The DC link voltage adjusts itself to the mean value of the rectified line voltage.

#### Design (continued)

The scope of supply of the Smart Line Modules includes:

- DRIVE-CLiQ cable for connection to the Control Unit on the immediate left for drive control (on 16 kW and 36 kW Smart Line Modules only)
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets (only on 16 kW and 36 kW Smart Line Modules)
- DRIVE-CLiQ cable (length depends on module width) to connect Smart Line Modules to adjacent Motor Module
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21 for digital inputs and outputs
- Connector X22 for digital inputs and outputs (only on 5 kW and 10 kW Smart Line Modules)
- Connector X1 for Line connection (only on 5 kW and 10 kW Smart Line Modules)
- 1 set of warning signs in 30 languages
- 1 heat conducting foil (only on Smart Line Modules with cold plate cooling)

#### Technical specifications

<sup>1)</sup> Power loss of Smart Line Module at rated power including losses of 24 V DC electronic power supply.

<sup>2)</sup> Power loss of the power electronics + power loss of the 24 V electronics

<sup>3)</sup> Nominal HP ratings are provided for ease of assigning components only. The Line Module outputs are dependent on the Motor Module loading and are to be dimensioned accordingly.

### Characteristic curves

#### Overload capability

Load cycle with previous load

S6 load cycle with previous load

S6 load cycle with previous load

#### Derating characteristics

Output power dependent on ambient temperature

Output power dependent on installation altitude

Voltage derating dependent on installation altitude

# SINAMICS S120 drive system

## Booksize format – Line Modules

### Smart Line Modules Line reactors

#### Overview

Smart Line Modules are not warranted to operate without the specified line reactors. The use of other makes of line reactor can lead to malfunctions or irreparable damage to equipment.

# SINAMICS S120 drive system

## Booksize format – Line Modules

Smart Line Modules  
Line filters

### Overview

In plants which have been specifically designed to ensure EMC, line filters work together with line reactors to restrict the conducted interference emanating from the Power Modules to the limit values of Class A1 as defined in EN 55011 and Category C2 as defined in EN 61800-3. Line filters are suited only for direct connection to TN-systems.

## Booksize format – Line Modules

### Smart Line Modules Recommended line-side components

#### Overview

Suitable line-side power components are assigned depending on the power rating of the Smart Line Module.

The tables below list recommended components.

Additional information about the line contactors, switch disconnectors, circuit breakers and fuses specified in the table can be found in Catalog IC 10.

#### Assignment of line-side power components to Smart Line Modules in booksize format

| Rated power | Suitable for Smart Line Module in booksize format              | Line contactor     | Circuit breaker IEC 60947 | Circuit breaker UL489/CSA C22.2 No. 5-02 | Main circuit breaker |

## Booksize format – Line Modules

### Active Line Modules

#### Overview

Active Line Modules are self-commutated infeed/regenerative feedback units (with IGBTs in infeed and regenerative feedback directions) and generate a regulated DC link voltage. This means that the connected Motor Modules are decoupled from the line voltage. Line voltage fluctuations within the permissible supply tolerances have no effect on the motor voltage. Active Line Modules are designed for connection to grounded, star (TN, TT) and non-grounded, symmetrical IT supply systems.

The DC link is pre-charged via integrated pre-charging resistors.

In order to operate an Active Line Module, it is absolutely essential to use the appropriate Active Interface Module.

#### Design

The Active Line Modules in booksize format feature the following interfaces as standard:

- 1 power connection via screw-type terminals
- 1 connection for the 24 V DC electronic power supply via the 24 V terminal adapter included in the scope of supply
- 1 DC link connection via integrated DC link busbars
- 3 DRIVE-CLiQ sockets
- 2 PE/protective conductor connections

The status of the Active Line Modules is indicated via two multi-color LEDs.

On the 100 mm (3.94 in) wide Active Line Module, the shield for the power supply cable can be connected to the integrated shield connection plate via a terminal element or tube clip, e.g. type KLBÜ CO 4 by Weidmüller. The terminal element must not be used for strain relief. Shield connection plates are available for the 150 mm (5.91 in), 200 mm (7.87 in) and 300 mm (11.81 in) wide modules.

The signal cable shield can be connected to the Line Module by means of a shield terminal, e.g. type KLBÜ 3-8 SC by Weidmüller.

The scope of supply of the Active Line Modules includes:

- DRIVE-CLiQ cable for connection to the Control Unit on the immediate left for drive control, length 0.11 m (4.33 in)
- DRIVE-CLiQ cable (length depends on module width) to connect Active Line Module to adjacent Motor Module, length = width of Active Line Module + 0.11 m (4.33 in)
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21 for digital inputs
- Fan insert for Active Line Modules of 80 kW and 120 kW (the voltage is supplied by the Active Line Module)
- 1 set of warning signs in 30 languages
- 1 heat conducting foil (only on Active Line Modules with cold plate cooling)

#### Integration

The Active Line Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl with
  - NCU 710.3 PN
  - NCU 720.3 PN
  - NCU 730.3 PN
  - Numeric Control Extensions NX10.3/NX15.3

<sup>1)</sup> In the case of cold plate cooling, derating is necessary due to heat transfer to the external heat sink.

<sup>2)</sup> Higher peak output is possible in combination with the Active Interface Module 6SL3100-0BE25-5AB0 (for operating cycle constraints, see SINAMICS S120 Manual).

<sup>3)</sup> For 6SL3135-7TE31-2AA3

<sup>4)</sup> Power loss of Active Line Module at rated power including losses of 24 V DC electronic power supply.

<sup>5)</sup> Nominal HP ratings are provided for ease of assigning components only. The Line Module outputs are dependent on the Motor Module loading and are to be dimensioned accordingly.

<sup>1)</sup> In the case of cold plate cooling, derating is necessary due to heat transfer to the external heat sink.

<sup>2)</sup> The coolant connections are located on the lower side of the components. All connection elements can be accessed using an appropriate tool.  
Thread type of water connections: Pipe thread ISO 228 G ½ B.

<sup>3)</sup> Power loss of Active Line Module at rated power including losses of 24 V DC electronic power supply.

<sup>4)</sup> This value applies to water as coolant; for other coolants, refer to the SINAMICS S120 Manual.

<sup>5)</sup> Max. cable lengths in conjunction with Active Interface Module and Basic Line Filter (Category C3 in accordance with EN 61800-3).

<sup>6)</sup> The fan is supplied with the Active Line Module and must be installed before the Active Line Module is commissioned.

<sup>7)</sup> Nominal HP ratings are provided for ease of assigning components only. The Line Module outputs are dependent on the Motor Module loading and are to be dimensioned accordingly.

### Active Line Modules Active Interface Modules

#### Overview

Active Interface Modules for 16 kW, 36 kW, 55 kW and 80 kW/120 kW

The Active Interface Modules combine with the Active Line Modules to form a functional unit and are essential for operation of the associated Active Line Module. The Active Interface Modules contain a Clean Power Filter and basic interference suppression to ensure compliance with Category C3 in accordance with EN 61800-3 regarding emitted interference.

The Clean Power Filter protects the mains connection from switching-frequency harmonics. The drive system therefore draws a sinusoidal current from the supply and causes almost no harmonics.

The Active Line Modules in combination with the Active Interface Module can also be operated with supply systems with an isolated star point (IT systems).

#### Design

The scope of supply of the Active Interface Modules includes:

- Connector X21 for temperature evaluation and fan control
- Connector X24 for connecting the 24 V supply for the integrated fan
- DRIVE-CLiQ cable for connecting the Control Unit to the Active Line Module; length of the DRIVE-CLiQ cable = width of the Active Interface Module + 0.11 m (4.33 in)
- Shield connection plate for Active Interface Module 16 kW
- 1 set of warning signs in 30 languages

# SINAMICS S120 drive system

## Booksize format – Line Modules

### Active Line Modules

### Active Interface Modules

#### Integration

1) Digital input (DI) or digital output (DO), controlled via Control Unit.

#### Connection example for Active Interface Module

The Active Interface Module requires a 24 V DC supply to operate the integrated fan.

The fan turns when the 24 V DC supply is applied and, if required (service life, noise), can be switched off from the Control Unit via the "Fan off" input. It is only permitted to switch off the fan when the infeed of the drive system is not operating, otherwise the Active Interface Module will overheat.

The thermostatic switch installed in the Active Interface Module is evaluated over the connected Active Line Module.

The power cables between the Active Interface Module and Active Line Module must be shielded if limit values for interference suppression are to be complied with. The cable shield can be routed over the shield connection set (option) to the Active Interface Module or Active Line Module.

Depending on the position of the Active Interface Module in the drive system, additional DRIVE-CLiQ cables may be required. If it is separately installed next to the left side of the Control Unit and Active Line Module, no additional DRIVE-CLiQ cables are required. If the Active Interface Module is placed between the Control Unit and Active Line Module, the DRIVE-CLiQ cables supplied with the Active Line Modules are suitable for setting up a line topology, i.e. Active Line Module and all Motor Modules in series on one DRIVE-CLiQ line. If the Active Line Module is connected over a separate DRIVE-CLiQ line, the DRIVE-CLiQ cable marked with (1) must be ordered. A DRIVE-CLiQ cable suitable for connection (2) is included in the scope of supply of the Active Line Module. For DRIVE-CLiQ cables for different configurations, see the MOTION CONNECT connection system.

Separate Active Interface Module

(1) DRIVE-CLiQ cable between Control Unit and Motor Module

|                                           |                          |
|-------------------------------------------|--------------------------|
| Active Interface Module 16 kW:            | 0.31 m (see Accessories) |
| Active Interface Module 36 kW:            | 0.41 m (see Accessories) |
| Active Interface Module 55 kW:            | 0.60 m (see Accessories) |
| Active Interface Module 80 kW and 120 kW: | 0.95 m (see Accessories) |

(2) Included in scope of supply of Active Line Modules

Active Interface Module integrated in the drive line-up

## Booksize format – Line Modules

### Active Line Modules

#### Line filters

#### Overview

In plants with strict EMC requirements, line filters work together with Active Interface Modules to restrict the conducted interference emanating from the power modules to the limit values of Category C2 as defined in EN 61800-3. Line filters are suited only for direct connection to TN systems.

Note: According to product standard IEC 61800-3, radio interference suppression commensurate with the relevant rated conditions must be provided and is a legal requirement in the EU (EMC Directive). Line filters and line reactors are required for this purpose. The use of line filters of other makes can lead to limit value violations, resonance, overvoltages and irreparable damage to motors or other equipment. The machine manufacturer must provide verification that the machinery to be operated with the drive products and the installed suppression elements, e.g. line filters, are CE-EMC-compliant.

Optional Basic Line Filters that are coordinated with the power ranges in booksize format are available for the SINAMICS S120 drive system.

With the Basic Line Filters in combination with the Active Interface Modules, the limits for the interference voltages can be extended to Category C2 (IEC 61800-3) or, retaining Category C3, longer total cable lengths are possible for the configuration.

## Booksize format – Line Modules

Active Line Modules  
Basic Line Filters

### Overview

Basic Line Filters are used on machines on which conducted interference emissions in the frequency range between 150 kHz and 30 MHz need to be damped in accordance with the requirements of CE-EMC legislation.

# SINAMICS S120 drive system

## Booksize format – Line Modules

### Active Line Modules Recommended line-side components

#### Overview

Suitable line-side power components are assigned depending on the power rating of the Active Line Modules.

The tables below list recommended components.

Additional information about the line contactors, switch disconnectors, circuit breakers and fuses specified in the table can be found in Catalog IC 10.

#### Assignment of line-side power components to Active Line Modules in booksize format

| Rated power | Assignment to Active Line Module in booksize format | Line contactor     | Output coupling device for line contactor | Main circuit breaker | Leading auxiliary switch for main switch |
|-------------|-----------------------------------------------------|--------------------|-------------------------------------------|----------------------|------------------------------------------|

## Booksize format – Line Modules

### Basic Line Modules

#### Overview

Basic Line Modules in booksize format

Basic Line Modules are available for applications in which no energy is returned to the supply or where the energy exchange between motor and generator axes takes place in the DC link. Basic Line Modules can only feed energy from the supply system into the DC link, energy cannot be fed back into the supply system. The DC link voltage is directly derived from the 3-phase line voltage via a 6-pulse bridge circuit. Basic Line Modules are designed for connection to grounded, star (TN, TT) and non-grounded, symmetrical IT supply systems. The connected Motor Modules are pre-charged over the integrated pre-charging resistors (20 kW and 40 kW) or through activation of the thyristors (100 kW).

The 20 kW and 40 kW Basic Line Modules are equipped with an integrated brake chopper and can be directly used for applications in generating mode after connecting an external braking resistor.

A Braking Module is only required with a 100 kW Basic Line Module in generating mode.

#### Design

The Basic Line Modules in booksize format feature the following interfaces as standard:

- 1 line connection
- 1 connection for the 24 V DC electronic power supply
- 1 DC link connection
- 3 DRIVE-CLiQ sockets
- 1 connection for braking resistor (20 kW and 40 kW Basic Line Modules only)
- 1 temperature sensor input

The status of the Basic Line Modules is indicated via two multi-color LEDs.

The scope of supply of the Basic Line Modules includes:

- DRIVE-CLiQ cable for connection to the Control Unit on the immediate left for drive control, length 0.11 m (4.33 in)
- DRIVE-CLiQ cable (length depends on module width) to connect Basic Line Module to adjacent Motor Module, length = width of Basic Line Module + 0.11 m (4.33 in)
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets
- 1 set of warning signs in 30 languages
- 1 heat conducting foil (for Basic Line Modules with cold plate cooling only)

#### Integration

The Basic Line Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl with
  - NCU 710.3 PN
  - NCU 720.3 PN
  - NCU 730.3 PN
  - Numeric Control Extensions NX10.3/NX15.3

**Note:** The thermostatic switch built into the braking resistor must be looped into the shutdown chain of the drive to prevent thermal overloading of the system in the event of a fault. If a braking resistor is not connected, a jumper must be connected between X21.1 and X21.2.

<sup>1)</sup> Can also be operated on supply systems with 200 ... 240 V 3 AC  $\pm 10\%$  with appropriate parameter assignment and reduced output.

<sup>2)</sup> The DC link voltage is unregulated and load-dependent

<sup>3)</sup> Nominal HP ratings are provided for ease of assigning components only. The Line Module outputs are dependent on the Motor Module loading and are to be dimensioned accordingly.

### Characteristic curves

#### Overload capability

Load cycle with previous load

Load cycle with previous load

S6 load cycle with previous load

#### 20 kW and 40 kW Basic Line Modules only

Load cycle with previous load

#### Braking power with external brake resistance

The following duty cycles are defined for the braking modules of the 20 kW and 40 kW Basic Line Modules:

The maximum possible braking power  $P_{max}$  is calculated using the following formula:

$$P_{max} = \frac{V^2}{R}$$

$V$  = Activation threshold  
 $R$  = Resistance value of the external braking resistor

The maximum braking power is achieved with the smallest permissible resistance value. The maximum possible braking power falls at larger resistance values.

## Booksize format – Line Modules

### Basic Line Modules

#### Characteristic curves (continued)

##### Braking power with external brake resistance

Braking power of the 20 kW Basic Line Modules depending on the connected braking resistor

When the recommended braking resistor is used, the following values result for the maximum braking power or continuous braking power:

Braking resistor 6SE7023-2ES87-2DC0  
Resistance value = 20 Ω → max. braking power = 30 kW;  
continuous braking power = 5 kW

Braking power of the 40 kW Basic Line Modules depending on the connected braking resistor

When the recommended braking resistor is used, the following values result for the maximum braking power or continuous braking power:

Braking resistor 6SE7028-0ES87-2DC0  
Resistance value = 8 Ω → max. braking power = 75 kW;  
continuous braking power = 10 kW (limited by braking module)

##### Derating characteristics

Output power dependent on ambient temperature

Output power dependent on installation altitude

Voltage derating dependent on installation altitude

## Booksize format – Line Modules

### Basic Line Modules Line reactors

#### Overview

20 kW and 100 kW line reactors

Line reactors reduce low-frequency line harmonic distortions and offload the semiconductors of the Basic Line Module.

## Booksize format – Line Modules

### Basic Line Modules

#### Line filters

#### Overview

In plants which have been specifically designed to ensure EMC, line filters work together with line reactors to restrict the conducted interference emanating from the Power Modules to the limit values of Class A1 as defined in EN 55011 and Category C2 as defined in EN 61800-3. Line filters are suited only for direct connection to TN systems.

## Booksize format – Line Modules

### Basic Line Modules Recommended line-side components

#### Overview

Suitable line-side power components are assigned depending on the power rating of the Basic Line Module.

The tables below list recommended components.

Additional information about the line contactors, switch disconnectors, circuit breakers and fuses specified in the table can be found in Catalog IC 10.

#### Assignment of line-side power components to Basic Line Modules in booksize format

| Rated power | Assignment to Basic Line Module in booksize format | Line contactor     | Output coupling device for line contactor | Main circuit breaker |
|-------------|----------------------------------------------------|--------------------|-------------------------------------------|----------------------|
| kW (HP)     | Type<br>6SL3130-<br>6SL3136-                       | Type               | Order No.                                 | Order No.            |
| 20 (25)     | 1TE22-0AA0                                         | <b>3RT1035-...</b> | <b>3TX7004-1LB00</b>                      | <b>3LD2504-0TK51</b> |

## Booksize format – Motor Modules

### Single Motor Modules

#### Overview

A wide range of single-axis and two-axis Motor Modules with graded current/power ratings can be supplied:

- Single Motor Modules: Single-axis variant in booksize format with rated output currents of 3 A to 200 A
- Double Motor Modules: Two-axis variant in booksize format with rated output currents of 3 A to 18 A

In principle, all Single and Double Motor Modules can be operated on Basic Line Modules, Smart Line Modules or Active Line Modules for the appropriate voltage range.

#### Design

The Single Motor Modules in booksize format feature the following interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 1 x electronic power supply connection via integrated 24 V DC bars
- 3 DRIVE-CLiQ sockets
- 1 motor connection, plug-in (not included in scope of supply) or screw-stud depending on rated output current
- 1 safe standstill input (enable pulses)
- 1 safe motor brake controller
- 1 temperature sensor input (KTY84-130 or PTC)
- 2 PE/protective conductor connections

The status of the Motor Modules is indicated via two multi-color LEDs.

The motor cable shield is inside the connector on 50 mm (1.97 in) and 100 mm (3.94 in) wide modules. A shield connection plate can be supplied for 150 mm (5.91 in), 200 mm (7.87 in) and 300 mm (11.81 in) wide modules. On these modules, the motor cable shield can be connected using a hose clip.

The signal cable shield can be connected to the Motor Module by means of a terminal element, type KLBÜ 3-8 SC by Weidmüller.

The scope of supply of the Motor Modules includes:

- DRIVE-CLiQ cable appropriate to the width of the Motor Module for connection to the adjacent Motor Module, length = width of Motor Module + 0.06 m (2.36 in)
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connector X21
- Connector X11 for the motor brake connection (for Motor Modules with a rated output current of 45 A to 200 A)
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets
- Fan insert for the 132 A and 200 A Motor Modules (the voltage for the fan insert is supplied by the Motor Module)
- 1 set of warning signs in 30 languages
- 1 heat conducting foil (for Motor Modules with cold plate cooling only)

#### Integration

The Single Motor Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl with
  - NCU 710.3 PN
  - NCU 720.3 PN
  - NCU 730.3 PN
  - Numeric Control Extensions NX10.3/NX15.3

<sup>1)</sup> 3 A ... 85 A Single Motor Modules with firmware version V2.5 and higher with appropriate parameterization and reduced output also operable on 200 ... 240 V 3 AC networks in accordance with a DC-link voltage of 270 ... 360 V DC.

<sup>2)</sup> At rated output current (max. output frequency 1300 Hz for 62.5 μs current control cycle, 8 kHz pulse frequency, 60 % permissible output current). Note the correlation between max. output frequency, pulse frequency and current derating

<sup>3)</sup> Rated power of a typical standard asynchronous motor at 600 V DC link voltage.

<sup>4)</sup> Rated DC link current for dimensioning an external DC connection.

<sup>5)</sup> With reinforced DC link busbar set, 150 A is possible (accessories).

# SINAMICS S120 drive system

<sup>1)</sup> Power loss of Motor Module at rated power including losses of 24 V DC electronic power supply.

<sup>2)</sup> At max. motor cable length 30 m (98 ft), pulse frequency 4 kHz and DC link voltage 540 ... 600 V.

<sup>3)</sup> Connector not included in scope of supply, see Accessories.

# SINAMICS S120 drive system

<sup>1)</sup> In the case of cold plate cooling, derating is necessary due to heat transfer to the external heat sink.

<sup>2)</sup> Rated power of a typical standard asynchronous motor at 600 V DC link voltage.

<sup>3)</sup> Rated DC link current for dimensioning an external DC connection.

<sup>4)</sup> Power loss of Motor Module at rated power including losses of 24 V DC electronic power supply.

<sup>5)</sup> At max. motor cable length 30 m (98 ft), pulse frequency 4 kHz and DC link voltage 540 ... 600 V.

<sup>1)</sup> The coolant connections are located on the lower side of the components. All connection elements can be accessed using an appropriate tool.  
Thread type of water connections: Pipe thread ISO 228 G ½ B.

<sup>2)</sup> The fan is supplied with the Motor Module and must be installed before the Motor Module is commissioned.

<sup>3)</sup> This value applies to water as coolant; for other coolants, refer to the 01/2012 Manual.

# SINAMICS S120 drive system

## Booksize format – Motor Modules

### Single Motor Modules

#### Selection and ordering data

## Booksize format – Motor Modules

### Single Motor Modules

#### Characteristic curves

##### Overload capability

Load cycle with previous load

Duty cycle with 60 s overload with a duty cycle duration of 300 s

Duty cycle without initial load

Duty cycle with 30 s overload with a duty cycle duration of 300 s

S6 load cycle with previous load with a load cycle period of 600 s

S6 load cycle with previous load with a load cycle period of 60 s

### Characteristic curves (continued)

#### Derating characteristics

Output current dependent on pulse frequency  
(rated current up to 132 A for Single Motor Modules in booksize format)

Output current as a function of installation altitude

Output current dependent on pulse frequency  
(rated current up to 200 A for Single Motor Modules in booksize format)

Voltage derating dependent on installation altitude

Output current as a function of ambient temperature

Current derating dependent on output frequency

# SINAMICS S120 drive system

## Booksize format – Motor Modules

### Double Motor Modules

#### Design

Double Motor Modules feature the following interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 × electronic power supply connections via integrated 24 V DC bars
- 4 DRIVE-CLiQ sockets

- 2 plug-in motor connections (not included in scope of supply)
- 2 safe standstill inputs (1 input per axis)
- 2 safe motor brake controller
- 2 temperature sensor inputs (KTY84-130 or PTC)
- 3 PE/protective conductor connections

The status of the Motor Modules is indicated via two multi-color LEDs.

On Double Motor Modules, the motor cable shield can be connected in the connector.

The signal cable shield can be connected to the Motor Module by means of a terminal element, e.g. type KLBÜ 3-8 SC by Weidmüller.

The scope of supply of the Motor Modules includes:

- DRIVE-CLiQ cable (length depends on motor module width) to connect Motor Module to the adjacent Motor Module
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connectors X21 and X22
- Device fans for cooling power units on modules with internal and external air cooling supplied from the internal voltage levels
- 1 set of warning signs in 30 languages
- 1 heat conducting foil (for Double Motor Modules with cold plate cooling only)

#### Integration

The Double Motor Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl with
  - NCU 710.3 PN
  - NCU 720.3 PN
  - NCU 730.3 PN
  - Numeric Control Extensions NX10.3/NX15.3

<sup>1)</sup> Rated power of a typical standard asynchronous motor at 600 V DC link voltage.

<sup>2)</sup> Rated DC link current for dimensioning an external DC connection.

<sup>3)</sup> Power loss of Motor Module at rated power including losses of 24 V DC electronic power supply.

<sup>4)</sup> At max. motor cable length 30 m (98 ft), pulse frequency 4 kHz and DC link voltage 540 ... 600 V.

<sup>5)</sup> Connector not included in scope of supply, see Accessories.

# SINAMICS S120 drive system

#### Characteristic curves

See Single Motor Modules in booksized format (page 5/64).

<sup>1)</sup> Nominal HP based on asynchronous motors (induction motors).  
Match the motor nameplate current for specific sizing.

# SINAMICS S120 drive system

## Booksize format – Motor Modules

### Series motor reactors

#### Overview

A series reactor in the form of a three-limb iron-cored reactor may be required in the case of special motors with minimal leakage inductance (for which the controller settings are insufficient). Motors with a low leakage inductance are, from experience, motors that can achieve high stator frequencies > 300 Hz or motors with a high rated current > 85 A.

The series motor reactors are designed for a pulse frequency of 4 kHz or 8 kHz output from the Motor Module. Higher pulse frequencies are not permissible.

The series motor reactor must be installed as close as possible to the Motor Module.

The voltage drop across a series reactor depends on the motor current and the motor frequency. If an unregulated infeed is used, the maximum rated motor voltage depends on the line supply voltage available. If these guide values are observed, lower reductions in power in the upper speed range of the motor can be achieved.

The surface temperature of the series motor reactor can reach up to 100 °C (212 °F). This additional heat source must be taken into account in the system.

The notes in the Configuration Manual for the motors used must be observed.

# SINAMICS S120 drive system

## Booksize format – DC link components

### Braking Module

#### Overview

A Braking Module and the matching external braking resistor are required to bring drives to a controlled standstill in the event of a power failure (e.g. emergency retraction or EMERGENCY STOP category 1) or limit the DC link voltage for brief periods of generator operation, e.g. when the regenerative feedback capability of the Line Module is deactivated. The Braking Module includes the power electronics and the associated control circuit. During operation, the DC link power is converted into heat loss in an external braking resistor.

Braking Modules in booksize format can also be used for rapid discharge of the DC link.

#### Design

The Braking Module in booksize format features the following interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 x electronic power supply connections via integrated 24 V DC bars
- Terminals for connecting the braking resistor
- 2 digital inputs (disable Braking Module/acknowledge faults and rapid discharge of DC link)
- 2 digital outputs (Braking Module disabled and prewarning – *Ixt* monitoring)
- 2 PE/protective conductor connections

The status of the Braking Module is indicated via two 2-color LEDs.

## Booksize format – DC link components

### Braking resistors

#### Overview

Excess energy in the DC link is dissipated in the braking resistor.

The corresponding braking resistor is connected to a Braking Module or Basic Line Module. Positioning the braking resistor outside the control cabinet or switchgear room enables the resulting heat loss to be routed away. The level of air conditioning required is therefore reduced.

# SINAMICS S120 drive system

## Booksize format – DC link components

### Capacitor Module

#### Overview

The Capacitor Module is used to increase the DC link capacitance to bridge momentary power losses.

The Capacitor Module is connected to the DC link voltage via the integrated DC link busbars. The Capacitor Module functions autonomously.

Several Capacitor Modules can be operated in parallel.

#### Design

The capacitor Module features the following interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 PE/protective conductor connections

# SINAMICS S120 drive system

## Booksize format – DC link components

### Control Supply Module

#### Overview

The Control Supply Module in booksize format provides a 24 V to 28.8 V DC power supply that can be set using an integrated potentiometer via the line or DC link. The Control Supply Module can either be operated individually or in a parallel connection with a maximum of 10 devices.

A DIP switch on the top of the module is used to change over in the deenergized state (details of connection for parallel operation are given in the Manual for booksize modules).

Using the Control Supply Module, it is possible, for example, to make emergency retraction movements in the event of a supply failure, provided that the DC link voltage is available.

#### Design

The Control Supply Module features the following interfaces as standard:

- 1 line connection
- 2 DC link connections via integrated DC link busbars
- 2 x electronic power supply connections via integrated 24 V DC bars
- 1 connection for the electronic power supply for Control Units, Terminal Modules, Sensor Modules, etc., via the 24 V terminal adapter provided in the scope of supply (max. cross-section 6 mm<sup>2</sup>, max. fuse protection 20 A)
- 1 integrated potentiometer for setting the output voltage
- 1 digital output to signal the error-free state
- 1 DIP switch to change over between single and parallel mode
- 2 PE/protective conductor connections

The status of the Control Supply Modules is indicated via two multi-color LEDs.

# SINAMICS S120 drive system

## Booksize format – DC link components

### DC link adapter

#### Overview

##### DC link rectifier adapter

DC link rectifier adapter for unit widths of 50 mm ... 100 mm (1.97 in ... 3.94 in)

DC link rectifier adapter for unit widths of 150 mm ... 300 mm (5.91 in ... 11.8 in)

If the internal DC link busbars of the Motor Modules are not used, the DC link voltage must be supplied externally through a DC link rectifier adapter, e.g. when devices of booksize format are coupled with devices of chassis format over an external DC busbar. The DC link rectifier adapter is mounted on the DC link busbars of the Motor Module. The DC link cables are routed from above.

##### DC link adapter

DC link adapter (multi-tier) for all unit widths

If a multi-tier Motor Module configuration is used, a DC link adapter can be provided for linking the DC links of two drive line-ups. The DC link adapter is mounted sideways on the DC link busbars of the Motor Module. Installation is possible on the right or left side of the Motor Module. The marking of the poles (DCN and DCP) at the DC link adapter match the side chosen for installation. The DC link cables are routed from behind. DC link adapters are supplied in sets of 2 units.

# SINAMICS S120 drive system

## Chassis format – Line Modules

### Active Line Modules

#### Overview

A wide range of single-axis Line Modules and Motor Modules with graded current/power ratings can be supplied:

- Active Line Modules: Single-axis version in chassis format with rated power from 132 kW to 300 kW
- Single Motor Modules: Single-axis version in chassis format with rated output currents of 210 A to 490 A

In principle, all Single Motor Modules can operate on Active Line Modules for the corresponding voltage range.

The self-commutated infeed/regenerative feedback units (with IGBTs in infeed and regenerative feedback directions) generate a regulated DC link voltage. This means that the connected Motor Modules are decoupled from the line voltage. Line voltage fluctuations within the permissible supply tolerances have no effect on the motor voltage.

If required, the Active Line Modules can also provide reactive power compensation.

Active Line Modules are designed for connection to grounded, star (TN, TT) and non-grounded, symmetrical IT supply systems.

In order to operate an Active Line Module, it is absolutely essential to use the appropriate Active Interface Module.

#### Design

The Active Line Modules in chassis format feature the following interfaces as standard:

- 1 line connection
- 1 connection for the 24 V DC electronic power supply
- 1 DC link connection (DCP, DCN) for supplying the connected Motor Modules
- 1 DC link connection (DCPA, DCNA) for connecting a Braking Module
- 3 DRIVE-CLiQ sockets
- 2 PE/protective conductor connections

The status of the Active Line Modules is indicated via two multi-color LEDs.

The scope of supply of the Active Line Modules includes:

- Frame sizes FX and GX:
  - 0.60 m (1.97 ft) DRIVE-CLiQ cable for connection to the CU320 Control Unit or SINUMERIK NCU

#### Integration

The Active Line Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl with
  - NCU 710.3 PN
  - NCU 720.3 PN
  - NCU 730.3 PN
- Numeric Control Extensions NX10.3/NX15.3

#### Selection and ordering data

<sup>1)</sup> Total sound pressure level of Active Interface Module and Active Line Module

<sup>2)</sup> Nominal HP ratings are provided for ease of assigning components only. The Line Module outputs are dependent on the Motor Module loading and are to be dimensioned accordingly.

### Characteristic curves

#### Overload capability

High overload

#### Derating characteristics

Current derating dependent on the ambient temperature

Note: A derating factor  $k_T > 1.0$  can be used only in conjunction with "current derating dependent on installation altitude". The rated current data must not be exceeded.

Current derating dependent on installation altitude

Voltage derating dependent on installation altitude

# SINAMICS S120 drive system

## Chassis format – Line Modules

### Active Line Modules Active Interface Modules

#### Overview

Active Interface Modules are used in combination with Active Line Modules in chassis format. Active Interface Modules contain a Clean Power Filter with basic interference suppression, the pre-charging circuit for the Active Line Module, the line supply voltage sensing circuit and monitoring sensors. The bypass contactor is an integral component in frame sizes FI and GI, which ensures a highly compact design.

The vast majority of line harmonics are suppressed by the Clean Power Filter.

The scope of supply of the Active Interface Modules includes:

- Frame size FI:
  - 0.60 m (1.97 ft) DRIVE-CLiQ cable for connection between Active Interface Module and Active Line Module
  - 1.45 m (4.76 ft) DRIVE-CLiQ cable for connection between Control Unit or SINUMERIK NCU and first Motor Module
- Frame size GI:
  - 0.95 m (3.12 ft) DRIVE-CLiQ cable for connection between Active Interface Module and Active Line Module
  - 1.45 m (4.76 ft) DRIVE-CLiQ cable for connection between Control Unit or SINUMERIK NCU and first Motor Module

## Chassis format – Line Modules

### Active Line Modules Recommended line-side components

#### Overview

Suitable line-side power components are assigned depending on the power rating of the Active Line Modules.

The tables below list recommended components.

Additional information about the line contactors, switch disconnectors, circuit breakers and fuses specified in the table can be found in Catalog IC 10.

#### Assignment of line-side power components to Active Line Modules in chassis format

| Rated power | Input current | Assignment to Active Interface Module | Assignment to Active Line Module | Bypass contactor                    |
|-------------|---------------|---------------------------------------|----------------------------------|-------------------------------------|
| kW (HP)     | A             | 6SL3300-...                           | 6SL3330-...                      |                                     |
| 132 (200)   | 210           | 7TE32-6AA0                            | 7TE32-1AA3                       | Included in Active Interface Module |
| 160 (225)   | 260           | 7TE32-6AA0                            | 7TE32-6AA3                       | Included in Active Interface Module |
| 235 (350)   | 380           | 7TE33-8AA0                            | 7TE33-8AA3                       | Included in Active Interface Module |

## Chassis format – Motor Modules

### Single Motor Modules

#### Design

The Single Motor Modules in chassis format feature the following interfaces as standard:

- 1 DC link connection (DCP, DCN) for connecting to the supply DC busbar
- 1 DC link connection (DCPA, DCNA) for connecting a Braking Module
- 1 electronic power supply connection
- 3 DRIVE-CLiQ sockets
- 1 motor connection
- 1 safe standstill input (enable pulses)
- 1 temperature sensor input (KTY84-130, PT100 two-wire or PTC)
- 1 PE/protective conductor connection connection

The status of the Motor Modules is indicated via two multi-color LEDs.

The scope of supply of the Motor Modules includes:

- Frame sizes FX and GX:
  - 0.60 m (1.97 ft) DRIVE-CLiQ cable for connection to the adjacent Motor Module

#### Integration

The Single Motor Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl with
  - NCU 710.3 PN
  - NCU 720.3 PN
  - NCU 730.3 PN
  - Numeric Control Extensions NX10.3/NX15.3

## Chassis format – Motor Modules

### Single Motor Modules

#### Characteristic curves

##### Overload capability

Load cycle data for Single Motor Modules in chassis format

The base-load current  $I_L$  is based on a duty cycle of 110 % for 60 s or 150 % for 10 s with a duty cycle duration of 300 s.

Low overload

The base-load current  $I_H$  is based on a duty cycle of 150 % for 60 s or 160 % for 10 s with a duty cycle duration of 300 s.

High overload

##### Derating factors

When the pulse frequency is increased, the derating factor of the output current must be taken into account.

This derating factor must be applied to the currents specified in the technical specifications.

**Derating factor of the output current as a function of the pulse frequency for devices with a rated pulse frequency of 2 kHz**

| Single Motor Module in chassis format | Type rating | Output current                 | Derating factor                |

## Chassis format – DC link components

### Braking Modules

#### Overview

A Braking Module and the matching external braking resistor are required to bring drives to a controlled standstill in the event of a power failure (e.g. emergency retraction or EMERGENCY STOP category 1) or limit the DC link voltage for brief periods of generator operation, e.g. when the regenerative feedback capability of the Line Module is deactivated. The Braking Module includes the power electronics and the associated control circuit. During operation, the DC link power is converted into heat loss in an external braking resistor. The Braking Module functions autonomously. A number of Braking Modules can be operated in parallel. In this case, each Braking Module must have its own braking resistor.

Braking Modules are designed to be built into Motor Modules, Line Modules or Power Modules in chassis format and are cooled by the fans on these modules. The supply voltage for the electronics is taken from the DC link. The Braking Modules are connected to the DC link by means of the busbar sets included in the scope of supply or flexible cables and, in the case of the Basic Line Module of frame size GB, by means of a separate molded cable set (see Accessories).

The activation threshold of the Braking Module can be adjusted by means of a DIP switch. The braking power values specified in the technical specifications apply to the upper activation threshold.

#### Design

The Braking Modules in chassis format feature the following interfaces as standard:

- 1 DC link connection
- 1 braking resistor connection
- 1 digital input (inhibit Braking Module/acknowledge fault)
- 1 digital output (Braking Module inhibited)
- 1 DIP switch for adjusting the activation threshold

#### Integration

Braking Modules in chassis format are designed for mounting in air-cooled units in chassis format. The fan of the Line Module, Motor Module or Power Module in which the Braking Module is mounted also cools the Braking Module. Braking Modules cannot operate autonomously because they are not equipped with cooling fans.

## Chassis format – DC link components

### Braking resistors

#### Overview

Excess energy in the DC link is dissipated via the braking resistor.

The braking resistor is connected to a Braking Module. Positioning the braking resistor outside the control cabinet or switchgear room enables the resulting heat loss to be routed away. The level of air conditioning required is therefore reduced.

2 braking resistors with different rated and peak power values are available for chassis format units.

The braking resistor is monitored on the basis of the mark-space ratio. A temperature switch (NC contact) is also fitted. This responds when the maximum permissible temperature is exceeded and can be evaluated by a controller.

#### Characteristic

Load diagram for Braking Module and braking resistor in chassis format

### Design

PM340 Power Modules in blocksize format, frame sizes FSA to FSF

The PM340 Power Modules in blocksize format feature the following connections and interfaces as standard:

- Line connection
- DCP/R1 and DCN DC link terminals
- PM-IF interface for connection of the PM340 Power Module and CU310-2 Control Unit or CUA31 Control Unit Adapter. The PM340 Power Module also supplies power to the CU310-2 Control Unit or CUA31 Control Unit Adapter by means of an integrated power pack
- Terminals DCP/R1 and R2 for connection of an external braking resistor
- Motor connection made with screw-type terminals or screw studs
- Control circuit for the Safe Brake Relay for controlling a holding brake
- 2 PE/protective conductor connections

Power Modules without integrated line filter can be connected to grounded star (TN, TT) and non-grounded symmetrical IT systems. Power Modules with integrated line filter are suitable only for connection to TN systems with grounded star points.

The integrated Braking Module (Braking Chopper) is rated such that it can connect the external braking resistor continuously. The temperature of the external braking resistor must be monitored to provide protection against thermal overloading.

# SINAMICS S120 drive system

## Blocksize format – Power Modules

### Power Modules

#### Integration

The PM340 Power Modules in blocksize format communicate with the CU310-2 Control Unit or the CUA31 Control Unit Adapter via the PM-IF interface.

PM340 Power Module in blocksize format with CU310-2 PN Control Unit

PM340 Power Module in blocksize format with CUA31 Control Unit Adapter

Many system components for PM340 Power Modules are designed as base components, i.e. the component is mounted on the baseplate and the PM340 Power Module in front of them in a space-saving construction. Up to two base components can be mounted in front of one another.

|                  | FSA | FSB | FSC | FSD | FSE | FSF |
|------------------|-----|-----|-----|-----|-----|-----|
| Line filter      | ✓   | –   | –   | –   | –   | –   |
| Line reactor     | ✓   | ✓   | ✓   | ✓   | ✓   | ○   |
| Braking resistor | ✓   | ✓   | ○   | ○   | ○   | ○   |

✓ = suitable as base-type

○ = not suitable as base-type

– = not available (use Power Modules with integrated line filter)

Basic layout of a PM340 Power Module with line reactor as base component

The line-side reactors are equipped with terminals and the reactors at the Power Module end with a pre-assembled cable. When installed, the mains terminals are at the top on frame sizes FSA to FSC, and at the bottom on frame sizes FSD and FSE.

PM340 Power Module in frame size FSA with line reactor and line filter

If a line filter is installed in addition to the line reactor on frame size FSA, the components must be arranged as shown in the figure above. In this case, the line connection is below.

Power Modules of frame size FSB and higher are available with integrated line filters, alleviating the need for an external line filter.

For configurations involving more than two base-type system components, individual components must be mounted to the side of the Power Module. In this instance, the line reactor must be installed behind the Power Module and the braking resistor to the side.

<sup>1)</sup> Nominal HP based on asynchronous motors and 460 V AC. For specific sizing select drive based on motor nameplate current and overload.

<sup>2)</sup> The input current depends on the motor load and line impedance.

The input currents apply for rated power loading (based on  $I_{rated}$ ) for a line impedance corresponding to  $u_k = 1\%$ .

<sup>3)</sup> Max. motor cable length 15 m (49 ft) (shielded) for PM340 Power Modules with integrated line filter to comply with the limit values of EN 61800-3 Category C2.

<sup>1)</sup> Nominal HP based on asynchronous motors and 460 V AC. For specific sizing select drive based on motor nameplate current and overload.

<sup>2)</sup> The input current depends on the motor load and line impedance.

The input currents apply for rated power loading (based on  $I_{rated}$ ) for a line impedance corresponding to  $u_k = 1\%$ .

<sup>3)</sup> Max. motor cable length 25 m (82 ft) (shielded) for PM340 Power Modules with integrated line filter to comply with the limit values of EN 61800-3 Category C2.

# SINAMICS S120 drive system

<sup>1)</sup> Nominal HP based on asynchronous motors and 460 V AC. For specific sizing select drive based on motor nameplate current and overload.

<sup>2)</sup> The input current depends on the motor load and line impedance.

The input currents apply for rated power loading (based on  $I_{rated}$ ) for a line impedance corresponding to  $u_k = 1\%$ .

<sup>3)</sup> Max. motor cable length 25 m (82 ft) (shielded) for PM340 Power Modules with integrated line filter to comply with the limit values of EN 61800-3 Category C2.

<sup>1)</sup> Nominal HP based on asynchronous motors and 460 V AC. For specific sizing select drive based on motor nameplate current and overload.

<sup>2)</sup> The input current depends on the motor load and line impedance. The input currents apply for rated power loading (based on  $I_{rated}$ ) for a line impedance corresponding to  $u_k = 1\%$ .

<sup>3)</sup> Max. motor cable length 25 m (82 ft) (shielded) for PM340 Power Modules with integrated line filter to comply with the limit values of EN 61800-3 Category C2.

<sup>1)</sup> Nominal HP based on asynchronous motors and 460 V AC. For specific sizing select drive based on motor nameplate current and overload.

<sup>2)</sup> The input current depends on the motor load and line impedance.

The input currents apply for rated power loading (based on  $I_{rated}$ ) for a line impedance corresponding to  $u_k = 1\%$ .

<sup>3)</sup> Max. motor cable length 25 m (82 ft) (shielded) for PM340 Power Modules with integrated line filter to comply with the limit values of EN 61800-3 Category C2.

## Blocksize format – Power Modules

### Power Modules

#### Characteristic curves

##### Overload capability

Load cycle with previous load

Duty cycle with 60 s overload with a duty cycle duration of 300 s

Duty cycle without initial load

Duty cycle with 30 s overload with a duty cycle duration of 300 s

S6 load cycle with previous load with a load cycle period of 600 s

S6 load cycle with previous load with a load cycle period of 60 s

### Characteristic curves (continued)

#### Derating characteristics

Output current as a function of pulse frequency, frame sizes FSA to FSE

Output current as a function of installation altitude, frame size FSF

Output current as a function of pulse frequency, frame size FSF

Voltage derating as a function of installation altitude, frame size FSF

Output current as a function of ambient temperature, frame size FSF

Output current as a function of output frequency, frame size FSF

## Blocksize format – Power Modules

### Line reactors

#### Overview

Line reactors for PM340 Power Modules frame sizes FSA to FSE

Line reactor for PM340 Power Modules frame size FSF

Line reactors limit the low-frequency harmonic effects and reduce the load on the other loads in the same supply system. In addition, the line reactors limit the current spikes at the converter input, e.g. for commutation notches. It is recommended to use the line reactors in combination with unfiltered PM340 units and line voltages with a high harmonic content (industrial networks).

#### Integration

The line reactors for the PM340 Power Modules in frame sizes FSA to FSE are designed as base components. The line reactor is attached to the mounting surface and the Power Module is mounted directly on the line reactor. The cables to the Power Modules are already connected at the line reactor.

The line reactor is connected to the line supply through terminals.

PM340 Power Module frame size FSB with base line reactor and shield connection kit

## Blocksize format – Power Modules

### Line filters

#### Overview

In plants with strict EMC requirements, the line filter for frame size FSA restricts the conducted interference emanating from the PM340 Power Module to the limit values of Class C2 as defined in EN 61800-3. The line filter is suited only for direct connection to TN (grounded) systems.

**Note:** The line filter is designed only for PM340 Power Modules of frame size FSA and a line voltage of 380 V to 480 V 3 AC. All other PM340 Power Modules are available with integrated line filter.

#### Integration

Line filter, line reactor and Power Module can be mounted in front of one another.

#### Technical specifications

## Blocksize format – Power Modules

### Recommended line-side components

#### Overview

Suitable line-side power components are assigned depending on the power rating of the Power Modules.

The following tables list recommended components and apply for ambient temperatures up to 40 °C (104 °F).

Additional information about the line contactors, switch disconnectors, circuit breakers and fuses specified in the table can be found in Catalog IC 10.

#### Assignment of line-side power components to Power Modules in blocksize format

| Rated output current | Type rating | Assignment to Power Module in blocksize format | Line contactor | Circuit breaker IEC 60947 and UL489/ CSA C22.2 No. 5-02 | UL/CSA fuse, Class J<br>Available from: Mersen<br><a href="http://www.ep.mersen.com">www.ep.mersen.com</a> |      |               |
|----------------------|-------------|------------------------------------------------|----------------|---------------------------------------------------------|------------------------------------------------------------------------------------------------------------|------|---------------|
| A                    | kW (HP)     | Type 6SL3210-                                  | Type           | Order No.                                               | Rated current                                                                                              | Size | Reference No. |

## Blocksize format – DC link components

### Braking resistors

#### Overview

Braking resistor for blocksize format, frame sizes FSA and FSC

The PM340 Power Modules cannot regenerate into the line supply. For regenerative operation, e.g. the braking of a rotating mass, a braking resistor must be connected to convert the resulting energy into heat.

The braking resistor is connected at terminals DCP/R1 and R2.

The braking resistors can be installed at the side next to the PM340 Power Modules. The braking resistors for the FSA and FSB frame sizes are designed as base components. If the PM340 Power Modules of the FSA or FSB frame size are operated without line reactor, the braking resistors can also be installed under the Power Modules.

The braking resistors for the Power Modules of the FSC to FSF frame sizes should be placed outside the control cabinet or outside the switchgear room in order to lead the resulting heat loss from the area of the Power Modules. The level of air conditioning required is therefore reduced.

The braking resistors are designed with a temperature switch. The temperature switch must be evaluated to prevent consequential damage if the braking resistor overheats.

#### Selection and ordering data

## SINAMICS S120 Combi

### Power Modules

#### Overview

SINAMICS S120 Combi Power Module

SINAMICS S120 Combi is a very compact and rugged drive concept tailored for compact turning and milling machines. SINAMICS S120 Combi integrates a line infeed with regenerative feedback capability, power units for spindle and feed motors as well as a TTL encoder interface into a single Power Module.

#### Benefits

- Compact multi-axis module with line infeed with regenerative feedback capability and power units for 3 or 4 axes
- Customized drive system for compact standard turning and milling machines
- Requires very little mounting space in control cabinet (incl. fan module, shield terminals and ventilation clearances)
- Optimized for weak supply networks with frequent undervoltage, network imbalances and large frequency fluctuations
- Optimized for harsh operating conditions with increased cabinet temperature and increased humidity
- Rugged Power Modules resistant to short circuits, overvoltage and ground faults
- Rugged and easy-to-fit screw-type terminals with integrated shield connection for the power cables
- Perfect expendability using additional Motor Modules in book-size compact format
- Low energy consumption thanks to state-of-the-art 400-V technology
- Excellent dynamic response and machining precision thanks to Dynamic Servo Control (DSC)
- Simple cabling thanks to intelligent DRIVE-CLiQ interface
- Very simple commissioning thanks to predefined topologies

#### Function

- Power Module with 3 or 4 integrated power units
- Integrated line infeed with regenerative feedback capability
- Integrated TTL encoder interface
- Integrated motor brake control for one axis
- Integrated fan power supply
- Line connection voltage 380 to 480 V 3 AC
- Supply types TT, TN and IT
- Integrated shield terminals
- Heat dissipation concept with an external heat sink for extremely low power loss in the control cabinet
- Easy-to-mount fan module optimized for harsh environments
- Increased availability thanks to fan monitoring
- Derating only from 45 °C cabinet temperature
- Power cables are connected by means of screw-type terminals

#### Integration

The following components can be connected to the SINAMICS S120 Combi drive system:

- SINUMERIK 828D BASIC T
- SINUMERIK 828D BASIC M
- SINUMERIK 828D
- 3 or 4 spindles/feed motors
- 3 or 4 motor encoders
- 3 or 4 direct encoders via DMC20
- Direct spindle encoder directly via TTL (5 V only) or sin/cos via SMC20
- External fan module
- Up to two additional SINAMICS S120 Motor Modules in booksize compact format via DC link connection and 24 V DC busbars
- Braking Module with braking resistor via DC link connection<sup>1)</sup>
- Control Supply Module via DC link connection and 24 V DC busbars
- One safe motor brake control
- 5 or 6 DRIVE-CLiQ sockets
- 24 V electronic power supply via connector
- 1 safe standstill input for the infeed (Enable Pulses)
- 1 safe standstill input for the spindle and feeds (Enable Pulses)
- 1 temperature sensor input for the spindle (KTY84-130 or PTC)
- PE/protective earth connections

The scope of supply of the SINAMICS S120 Combi Power Modules includes:

- SINAMICS S120 Combi Power Module
- Accessories pack consisting of:
  - 4 DRIVE-CLiQ dust-proof blanking plugs
  - Connector X224 for the electronic power supply
  - Connector X11 for motor brake control
  - Connector X21 Enable Pulses infeed
  - Connector X22 Enable Pulses drives/temp.
  - 5 shield terminals for power cables
  - Shield terminal for signal cable

## SINAMICS S120 Combi

**Power Modules**  
**External fan module, reinforcement plates**

### Overview

#### External fan module

The external fan module combined with the reinforcement plates is employed to provide perfect cooling of a SINAMICS S120 Combi Power Module.

To cool the SINAMICS S120 Combi Power Modules, a volumetric flow of air through the heat sink of at least 160 m<sup>3</sup>/h is required.

The external fan module supplies a maximum volumetric flow of 290 m<sup>3</sup>/h. This dimensioning ensures an adequate air flow rate, even with a lower supply voltage or with a slightly soiled heat-sink.

Due to the encapsulated electronics and the ball-bearing-mounted closed rotor, the fan module can be used even under exacting environmental conditions. The fans are equipped with electronic reverse-polarity, blocking and overload protection systems. To ensure maximum machine availability, the fan speed is monitored. A user alarm is displayed if the fan stops.

### Overview

#### Reinforcement plates

It is essential to ensure that the air actually flows through the heat sink. The gap between the fan module and heatsink must therefore be closed. The reinforcement plates must be used for this purpose where possible.

The reinforcement plates

- close the gap between the fan module and heatsink
- reinforce the rear wall of the control cabinet for sealed installation
- guarantee ideal ventilation spaces

## SINAMICS S120 Combi

Power Modules  
Line filters

### Overview

Line filters

In plants which have been specifically designed to ensure EMC, line filters work together with line reactors to restrict the conducted interference emanating from the Power Modules to the limit values of Class A1 as defined in EN 55011 and Category C2 as defined in EN 61800-3. Line filters are suited only for direct connection to TN systems.

## SINAMICS S120 Combi

### SINAMICS S120 booksize compact format

#### Overview

The SINAMICS S120 Combi Power Module can be extended by the SINAMICS S120 Motor Modules in booksize compact format.

#### Benefits

- Simple addition of supplementary machine components when using the SINAMICS S120 Combi drive system
- Expansion axes can interpolate freely with the SINAMICS S120 Combi axes
- Connection of the Motor Modules by simple connection of DC link busbars and 24 V busbars
- Motor Modules are supplied via the infeed integrated in the SINAMICS S120 Combi
- Energy exchange between Motor Modules and the SINAMICS S120 Combi Power Module through a common DC link
- Simple connection to the DRIVE-CLiQ interface

#### Function

Connection of up to two SINAMICS S120 Motor Modules in booksize compact format to the integrated line infeed of the SINAMICS S120 Combi Power Modules<sup>1)</sup>

<sup>1)</sup> Please note the simultaneity factor of the axis grouping for the infeed power of the SINAMICS S120 Combi Power Modules.

# SINAMICS S120 drive system

## SINAMICS S120 Combi

### SINAMICS S120 booksize compact format Single Motor Modules

#### Overview

Single Motor Modules

The Single Motor Modules in booksize compact format feature the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 1 x electronic power supply connection via integrated 24 V DC bars
- 3 DRIVE-CLiQ sockets
- 1 motor connection via connector
- 1 safe standstill input (enable pulses)
- 1 safe motor brake controller
- 1 temperature sensor input (KTY84-130 or PTC)
- 2 PE/protective conductor connections

#### Overview

The status of the Motor Modules is indicated via two multi-color LEDs.

The shield of the motor cable is routed over the connector to the motor connection.

The signal cable shield can be connected to the Motor Module by means of a shield terminal, e.g. type KLBÜ 3-8 SC by Weidmüller.

The scope of supply of the Motor Modules includes:

- DRIVE-CLiQ cable (length depends on module width) to connect Motor Module to adjacent Motor Module, length 0.11 m (4.33 in) for 50 mm (1.97 in) wide Motor Modules or length 0.16 m (6.3 in) for 75 mm (2.95 in) wide Motor Modules.
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connector X21
- Connector X11 for motor brake connection
- Connector X1 for motor connection
- 1 set of warning signs in 30 languages
- 1 heat conducting foil

## SINAMICS S120 Combi

### SINAMICS S120 booksize compact format Double Motor Modules

#### Overview

Double Motor Modules

Double Motor Modules feature the following interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 x electronic power supply connections via integrated 24 V DC bars
- 4 DRIVE-CLiQ sockets
- 2 motor connections via connector
- 2 safe standstill inputs (1 input per axis)
- 2 safe motor brake controls
- 2 temperature sensor inputs (KTY84-130 or PTC)
- 3 PE/protective conductor connections

The status of the Motor Modules is indicated via two multi-color LEDs.

#### Overview

The shield of the motor cables is routed over the connectors to the motor connection.

The signal cable shield can be connected to the Motor Module by means of a shield terminal, e.g. type KLBU 3-8 SC by Weidmüller.

The scope of supply of the Motor Modules includes:

- DRIVE-CLiQ cable for connecting to the adjacent Motor Module, length 0.16 m (6.3 in)
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connectors X21 and X22
- Connectors X1 and X2 for motor connection
- 1 set of warning signs in 30 languages
- 1 heat conducting foil

<sup>1)</sup> Rated DC link current for dimensioning an external DC connection.

<sup>2)</sup> Power loss of Motor Module at rated power including losses of 24 V DC electronic power supply.

<sup>3)</sup> Nominal HP based on asynchronous motors (induction motors). Match the motor nameplate current for specific sizing.

# SINAMICS S120 drive system

## Supplementary system components

### CBE20 Communication Board

#### Overview

The CBE20 Communication Board can be used to connect to a PROFINET IO network via a CU320-2 Control Unit.

The SINAMICS S120 then assumes the function of a PROFINET IO device and can perform the following functions:

- PROFINET IO device
- 100 Mbit/s full duplex
- Supports real-time classes of PROFINET IO:
  - RT (Real-Time)
  - IRT (Isochronous Real-Time), minimum send cycle 500 µs
- Connects to controls as PROFINET IO devices using PROFIdrive compliant with Specification V4
- Standard TCP/IP communication for engineering processes using the STARTER commissioning tool
- Integrated 4-port switch with four RJ45 sockets based on the PROFINET ASIC ERTEC400. The optimum topology (line, star, tree) can therefore be configured without additional external switches.

#### Integration

The CBE20 Communication Board plugs into the option slot on the CU320-2 Control Unit.

# SINAMICS S120 drive system

## Supplementary system components

### CUA31 Control Unit Adapter

#### Overview

CUA31 Control Unit Adapter

The CUA31 Control Unit Adapter converts the PM-IF interface to a DRIVE-CLiQ interface. With the CUA31 Control Unit Adapter, Power Modules in blocksize format can also be operated on a CU320-2 Control Unit or on an NCU 7.x of the SINUMERIK.

#### Design

The CUA31 Control Unit Adapter features the following interfaces:

- 1 temperature sensor input (KTY84-130 or PTC)
- 3 DRIVE-CLiQ sockets
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 safe standstill input (enable pulses)

The status of the CUA31 Control Unit Adapter is indicated via multi-color LEDs.

#### Integration

The CUA31 Control Unit Adapter is snapped onto the Power Module in blocksize format and communicates with the CU320-2 Control Unit or an NCU 7.x of the SINUMERIK by means of a DRIVE-CLiQ link.

The Control Unit Adapter's power is supplied by the Power Module via the PM-IF interface. If the Control Unit Adapter needs to communicate when the Power Module is switched off, it must be supplied with 24 V DC from an external source.

Other DRIVE-CLiQ nodes such as Sensor Modules or Terminal Modules can be connected to the Control Unit Adapter.

### DMC20 DRIVE-CLiQ Hub Module

#### Overview

DMC20 DRIVE-CLiQ Hub Module

The DMC20 DRIVE-CLiQ Hub Module is used to implement a star-shaped configuration of a DRIVE-CLiQ line. Two DMC20 DRIVE-CLiQ Hub Modules can be connected in series (cascaded).

#### Design

The following are located on the DMC20 DRIVE-CLiQ Hub Module:

- 6 DRIVE-CLiQ sockets for connecting 5 DRIVE-CLiQ nodes
- 1 connection for the electronic power supply via the 24 V DC power supply connector

The status of the DMC20 DRIVE-CLiQ Hub Module is indicated via a multi-color LED.

#### Integration

Signals from more than one encoder can be collected with one DRIVE-CLiQ Hub Module and forwarded to the Control Unit through a single DRIVE-CLiQ cable.

With the DRIVE-CLiQ Hub Module, individual DRIVE-CLiQ nodes can be removed without interrupting the data exchange with the remaining devices in the DRIVE-CLiQ line.

# SINAMICS S120 drive system

## Supplementary system components

### TM15 Terminal Module

#### Overview

The number of available digital inputs and outputs within a drive system can be expanded with the TM15 Terminal Module.

#### Design

The following are located on the TM15 Terminal Module:

- 24 bidirectional digital inputs/outputs (isolation in 3 groups with 8 channels each)
- 24 green status LEDs for indicating the logical signal status of the relevant terminal
- 2 DRIVE-CLiQ sockets
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 PE/protective conductor connection

The TM15 Terminal Module can be snapped onto a TH 35 top-hat rail to EN 60715 (IEC 60715).

The signal cable shield can be connected to the TM15 Terminal Module via a shield terminal, e.g. type SK8 by Phoenix Contact or type KLBÜ CO 1 by Weidmüller. The shield terminal must not be used for strain relief.

The status of the TM15 Terminal Module is indicated via a multi-color LED.

#### Integration

The TM15 Terminal Module communicates with the CU310-2, CU320-2, or a SINUMERIK Control Unit via DRIVE-CLiQ.

<sup>1)</sup> The specified delay times refer to the hardware. The actual reaction time depends on the time slot in which the digital input/output is processed.

# SINAMICS S120 drive system

## Supplementary system components

### TM41 Terminal Module

#### Overview

The TM41 Terminal Module supplies TTL signals which emulate an incremental encoder, e.g. to a higher-level control. The encoder interface (incremental encoder emulation) can be linked to an encoder signal from the Control Unit, e.g. incremental encoder sin/cos, by parameter assignment.

The TM41 Terminal Module increases the number of digital inputs/outputs and analog inputs that are available in the drive system.

#### Design

The following are located on the TM41 Terminal Module:

- 4 bidirectional digital inputs/outputs
- 4 digital inputs (with electrical isolation)
- 1 analog input
- 1 interface for emulation of TTL incremental encoder (RS422)
- 1 LED for signaling zero mark detection for encoder interface
- 2 DRIVE-CLiQ sockets
- 1 connection for the 24 V DC supply of the digital outputs
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 PE/protective conductor connection

The TM41 Terminal Module can be snapped onto a TH 35 top-hat rail to EN 60715 (IEC 60715).

The signal cable shield can be connected to the TM41 Terminal Module via a shield terminal, e.g. type SK8 by Phoenix Contact or type KLBÜ CO 1 by Weidmüller. The shield terminal must not be used for strain relief.

The status of the TM41 Terminal Module is indicated via a multi-color LED.

An LED next to the interface for TTL pulse encoder emulation is illuminated as soon as a zero mark is detected.

#### Integration

The TM41 Terminal Module communicates with the CU310-2, CU320-2, or a SINUMERIK Control Unit via DRIVE-CLiQ.

<sup>1)</sup> The specified delay times refer to the hardware.  
The actual reaction time depends on the time slot in which the digital input/output is processed.

<sup>2)</sup> If the analog input is to be operated as a quasi signal processor with continuously variable input voltage, the sampling frequency  $f_a = 1/t_{\text{time slice}}$  must be at least twice the value of the highest signal frequency  $f_{\max}$ .

# SINAMICS S120 drive system

## Supplementary system components

### TM120 Terminal Module

#### Overview

4 temperature sensors (KTY84-130 or PTC) can be evaluated via the TM120 Terminal Module. The temperature sensor inputs are safely electrically separated from the evaluation electronics in the TM120 Temperature Module and are suitable for evaluating the temperature of special motors, e.g. 1FN linear motors and 1FW6 built-in torque motors.

The TM120 Terminal Module can be operated on a CU320-2 Control Unit from firmware 4.3 and higher.

#### Design

The following are located on the TM120 Terminal Module:

- 4 temperature sensor inputs (KTY84-130 or PTC)
- 2 DRIVE-CLiQ sockets

The status of the TM120 Terminal Module is indicated via a multi-color LED.

The TM120 Terminal Module is designed to be snapped onto a TH35 top-hat rail in accordance with EN 60715.

#### Integration

A TM120 Terminal Module is automatically assigned to an SMCxx Sensor Module by connecting the Sensor Module to the Motor Module via DRIVE-CLiQ via a TM120 Terminal Module. The assignment can also be made manually.

## Supplementary system components

### Safe Brake Relay

#### Overview

In the case of the Safe Brake Relay, the brake is controlled in accordance with ISO 13849-1 or EN 954-1 safety class 3 and IEC 61508 SIL 2.

#### Design

The Safe Brake Relay can be installed below the Power Module on the shield connection plate.

The Safe Brake Relay has the following connections and interfaces:

- 1 two-channel transistor output stage to control the motor brake solenoid
- 1 connection for the cable harness (CTRL) to the Power Module in blocksize format
- 1 connection for the 24 V DC power supply

The connection between the 24 V DC supply and the Safe Brake Relay must be kept as short as possible.

The scope of supply of a Safe Brake Relay includes the following:

- 2 cable harnesses for connecting to the CTRL socket of the PM340 Power Module
  - 0.32 m (1.05 ft) length for frame sizes FSA and FSC
  - 0.55 m (1.8 ft) length for frame sizes FSE and FSF

#### Integration

The 24 V DC solenoid of the motor brake is directly connected to the Safe Brake Relay. External surge suppressors are not required.

# SINAMICS S120 drive system

## Encoder system connection

### Encoder system connection

#### Overview

##### Motors with DRIVE-CLiQ interface

DRIVE-CLiQ is the preferred method for connecting the encoder systems to SINAMICS S120.

Motors with DRIVE-CLiQ interface are available for this purpose, e.g.

- 1PH8/1FT6/1FT7/1FK7 synchronous motors
- 1PH8/1PH7 asynchronous motors

Motors with a DRIVE-CLiQ interface can be directly connected to the associated Motor Module via the available MOTION-CONNECT DRIVE-CLiQ cables. The MOTION-CONNECT DRIVE-CLiQ cable is connected to the motor in degree of protection IP67.

The DRIVE-CLiQ interface supplies power to the motor encoder via the integrated 24 VDC supply and transfers the motor encoder and temperature signals and the electronic rating plate data, e.g. a unique identification number, rating data (voltage, current, torque) to the Control Unit. This means that for the various encoder types - e.g. resolver or absolute encoder - different encoder cable types with varying permissible lengths are now no longer required; just one cable type, MOTION-CONNECT DRIVE-CLiQ with varying permissible lengths, can be used for all encoders.

These motors simplify commissioning and diagnostics, as the motor and encoder type are identified automatically.

##### Motors without DRIVE-CLiQ interface

The encoder and temperature signals of motors without DRIVE-CLiQ interfaces, as well as those of external encoders, must be connected via Sensor Modules. Sensor Modules Cabinet-Mounted are available in degree of protection IP20 for control cabinet installation, as well as Sensor Modules External-Mounted (degree of protection IP67).

Only one encoder system can be connected to each Sensor Module.

#### Technical specifications

##### Motors with DRIVE-CLiQ interface

###### Built-in encoder systems

- Incremental encoder 22 bit (resolution 4.194.304, internal 2048 S/R) + commutation position 11 bit (encoder IC22DQ)
- Absolute encoder 22 bit single-turn (resolution 4.194.304, internal 2048 S/R) + 12 bit multi-turn (traversing range 4096 revolutions) (encoder AM22DQ)
- Absolute encoder 20 bit single-turn (resolution 1.048.576, internal 512 S/R) + 12 bit multi-turn (traversing range 4096 revolutions) (encoder AM20DQ)
- Absolute encoder 16 bit single-turn (resolution 65.536, internal 32 S/R) + 12 bit multi-turn (traversing range 4096 revolutions) (encoder AM16DQ)
- Absolute encoder 15 bit single-turn (resolution 32.768, internal 16 S/R) + 12 bit multi-turn (traversing range 4096 revolutions) (encoder AM15DQ)
- Resolver 15 bit (resolution 32.768, internal, multi-pole) (R15DQ)
- Resolver 14 bit (resolution 16.384, internal, 2-pole) (R14DQ)

**Current requirement at 24 V DC, max.**  
(Supply via MOTION-CONNECT DRIVE-CLiQ cable)

190 mA

###### Cable length, max.

- When using MOTION-CONNECT 500 DRIVE-CLiQ cables
- When using MOTION-CONNECT 800 DRIVE-CLiQ cables

100 m (328 ft)

50 m (164 ft)

#### More information

Motor encoder and temperature signals must be connected when possible to the corresponding Motor Module or Power Module and external encoders to the Control Unit. However, the DRIVE-CLiQ connections can also be bundled via DRIVE-CLiQ Hub Modules.

##### Safety Integrated

The Safety Integrated Extended Functions of the SINAMICS S120 drive system require suitable encoders.

##### Motor driven by belt

Unfavorable material combinations generate frictional electricity between the belt pulley and the belt. Electrostatic charging must be prevented, since this can discharge via the motor shaft and the encoder, thereby causing disturbances in the encoder signals. One remedy is to use an anti-static belt.

# SINAMICS S120 drive system

## Encoder system connection

### SMC10 Sensor Module Cabinet-Mounted

#### Overview

The SMC10 Sensor Module Cabinet-Mounted is required to evaluate the encoder signals of motors without a DRIVE-CLiQ interface. External encoders can also be connected via the SMC10.

The following encoder signals can be evaluated:

- 2-pole resolver
- Multi-pole resolver

#### Design

The SMC10 Sensor Module Cabinet-Mounted features the following connections and interfaces as standard:

- 1 DRIVE-CLiQ interface
- 1 encoder connection including motor temperature detection (KTY84-130 or PTC) via SUB-D connector
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 PE/protective conductor connection

The status of the SMC10 Sensor Module Cabinet-Mounted is indicated via a multi-color LED.

The SMC10 Sensor Module Cabinet-Mounted can be snapped onto a TH 35 top-hat rail according to EN 60715 (IEC 60715).

The signal cable shield is connected via the encoder system connector and can also be connected to the SMC10 Sensor Module Cabinet-Mounted via a shield terminal, e.g. type SK8 by Phoenix Contact or type KLBÜ CO 1 by Weidmüller.

#### Integration

SMC10 Sensor Modules Cabinet-Mounted communicate with a Control Unit via DRIVE-CLiQ.

# SINAMICS S120 drive system

## Encoder system connection

### SMC20 Sensor Modules Cabinet-Mounted

#### Overview

The SMC20 Sensor Module Cabinet-Mounted is required to evaluate the encoder signals of motors without a DRIVE-CLiQ interface. External encoders can also be connected via the SMC20.

The following encoder signals can be evaluated:

- Incremental encoder sin/cos 1 V<sub>pp</sub>
- Absolute encoder EnDat
- SSI encoder with incremental signals sin/cos 1 V<sub>pp</sub> (firmware V2.4 and later)

The motor temperature can also be detected using KTY84-130 or PTC thermistors.

#### Design

The SMC20 Sensor Module Cabinet-Mounted features the following connections and interfaces as standard:

- 1 DRIVE-CLiQ interface
- 1 encoder connection including motor temperature detection (KTY84-130 or PTC) via SUB-D connector
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 PE/protective conductor connection

The status of the SMC20 Sensor Module Cabinet-Mounted is indicated via a multi-color LED.

The SMC20 Sensor Module Cabinet-Mounted can be snapped onto a TH 35 top-hat rail acc. to EN 60715 (IEC 60715).

The signal cable shield is connected via the encoder system connector and can also be connected to the SMC20 Sensor Module Cabinet-Mounted via a shield terminal, e.g. type SK8 by Phoenix Contact or type KLBÜ CO 1 by Weidmüller.

#### Integration

SMC20 Sensor Modules Cabinet-Mounted communicate with a Control Unit via DRIVE-CLiQ.

## Encoder system connection

### SMC30 Sensor Module Cabinet-Mounted

#### Overview

The SMC30 Sensor Module Cabinet-Mounted is required to evaluate the encoder signals of motors without a DRIVE-CLiQ interface. External encoders can also be connected via the SMC30.

The following encoder signals can be evaluated:

- Incremental encoders TTL/HTL with/without open-circuit detection (open-circuit detection is only available with bipolar signals)
- SSI encoder with TTL/HTL incremental signals
- SSI encoder without incremental signals

The motor temperature can also be detected using KTY84-130 or PTC thermistors.

#### Design

The SMC30 Sensor Module Cabinet-Mounted features the following connections and interfaces as standard:

- 1 DRIVE-CLiQ interface
- 1 encoder connection including motor temperature detection (KTY84-130 or PTC) via SUB-D connector or terminals
- 1 connection for the electronic power supply via the 24 V DC power supply connector
- 1 PE/protective conductor connection

The status of the SMC30 Sensor Module Cabinet-Mounted is indicated via a multi-color LED.

The SMC30 Sensor Module Cabinet-Mounted can be snapped onto a TH 35 top-hat rail according to EN 60715 (IEC 60715).

The maximum encoder cable length between SMC30 modules and encoders is 100 m (328 ft). For HTL encoders, this length can be increased to 300 m (984 ft) if the A+/A- and B+/B- signals are evaluated and the power supply cable has a minimum cross-section of 0.5 mm<sup>2</sup>.

The signal cable shield can be connected to the SMC30 Sensor Module Cabinet-Mounted via a shield terminal, e.g. type SK8 by Phoenix Contact or type KLBÜ CO 1 by Weidmüller.

#### Integration

SMC30 Sensor Modules Cabinet-Mounted communicate with a Control Unit via DRIVE-CLiQ.

#### Technical specifications

## Encoder system connection

### SME20/SME25 Sensor Modules External

#### Overview

SME20/SME25 Sensor Modules External are encoder evaluation units for machine encoders (direct measuring systems).

The devices are designed with IP67 degree of protection. This means that the units can be installed outside the control cabinet near the machine encoder.

The following encoder signals can be evaluated:

- Incremental encoder sin/cos 1 V<sub>pp</sub> without rotor position track (C and D tracks)
- Absolute encoder EnDat 2.1
- SSI absolute encoder<sup>1)</sup> with incremental signals sin/cos 1 V<sub>pp</sub> (firmware version V2.4 and later)

It is possible to connect a motor with a 17-pole circular encoder connector to the 12-pole circular connector of the SME20 using adapter cable 6FX 8002-2CA88-....

- KTY/PTC temperature sensors can be used only for SME20.
- The Sensor Module is only suitable for motors without absolute track signals (C and D tracks), e.g.:
  - Synchronous motors with pole position identification (1FN, 1FW)
  - Asynchronous motors (1PH)

SME20/SME25 Sensor Modules External evaluate the encoder signals and convert the information obtained to DRIVE-CLiQ. Neither motor nor encoder data are saved in the SME20/SME25.

#### Design

SME20/SME25 Sensor Modules External feature the following connections and interfaces as standard:

- 1 DRIVE-CLiQ interface with integrated 24 V DC electronic power supply from the Control Unit or Motor Module
- 1 encoder connector (circular plug)
- 1 PE/protective conductor connection

#### Integration

SME20/SME25 Sensor Modules External communicate with a Control Unit via DRIVE-CLiQ.

<sup>1)</sup> For SME25, only encoders with 5 V supply voltage.

<sup>2)</sup> For length code, see section MOTION-CONNECT connection systems.

<sup>1)</sup> The maximum cable length for the encoder system interface depends on the current consumption of the encoder system and the cross-section of the wires in the cable. However, the maximum length is 10 m (32.8 ft)  
(For detailed information see Manual SINAMICS S120 Control Units and supplementary system components).

# SINAMICS S120 drive system

## Encoder system connection

### SME120/SME125 Sensor Modules External

#### Overview

The SME120/SME125 Sensor Modules External are encoder evaluation units with degree of protection IP67, especially suitable for use in linear and torque motor applications. They can be installed close to the motor systems and encoders in the machine.

Sensor Modules External evaluate the encoder signals and motor temperature sensors specifically and convert the information obtained for DRIVE-CLiQ.

The motor temperature signals are safely electrically separated.

A hall effect sensor box can be connected for the SME120 to determine the commutation position of a linear motor.

Neither motor nor encoder data are saved in the SME120/SME125.

The SME120 and SME125 can be operated on Control Units with firmware release V2.4 and later.

The following encoder signals can be evaluated depending on the type of Sensor Module:

- Incremental encoder sin/cos 1  $V_{pp}$
- Absolute encoder EnDat 2.1
- SSI absolute encoder<sup>1)</sup> with sin/cos 1  $V_{pp}$  incremental signals, but without reference signal

The motor temperature can also be detected using KTY84-130 or PTC thermistors.

#### Design

SME120/SME125 Sensor Modules External feature the following connections and interfaces as standard:

- 1 DRIVE-CLiQ interface with integrated 24 V DC electronic power supply from the Control Unit or Motor Module
- 1 encoder connector (circular plug)
- 1 temperature sensor connection (circular connector)
- 1 hall effect sensor connection (circular connector) (SME120 only)
- 1 PE/protective conductor connection

#### Selection and ordering data

## Measuring systems

### Built-on optoelectronic rotary encoders Introduction

#### Overview

Absolute encoders, incremental encoders and mounting accessories

The built-on optoelectronic rotary encoders sense distances, angles of rotation or speeds in machines. They can be used in conjunction with numerical control systems, programmable logic controllers, drives and position displays, e.g. for:

- SINUMERIK CNC controls
- SIMOTION Motion Control Systems
- SIMATIC programmable logic controllers
- SINAMICS drive systems
- SIMODRIVE drive systems

#### Application

A distinction is made between incremental and absolute measuring procedures:

- In the case of incremental encoders, the machine must travel to a reference point after each power-off state, as the position is not usually stored in the controller, and movements of the machine while the power is off are not recorded.
- Absolute encoders, on the other hand, also record these movements while the power is off and return the actual position with power On. Travel to a reference point is not necessary.

#### Design

All encoders are available in Synchro flange and clamp flange versions. Encoders with a Synchro flange can be attached to the machine with 3 clamps or mounted with axial screws. The encoder is driven by means of a plug-in coupling or a spring disk coupling. Alternatively, pulleys can also be used.

The encoder supply voltage is 5 V DC or alternatively 10 V to 30 V DC. The 10 V to 30 V DC version supports longer cable lengths. Most control systems apply the supply voltage directly on the measuring circuit connector. With SINAMICS, the power supply for the measuring systems is provided via the Sensor Modules.

For rotary encoders with cables, the cable length including the connector is 1 m (3.28 ft).

The following bending radii for the cables at the encoder must be observed:

- One-time bending:  $\geq 20$  mm (0.79 in)
- Continuous bending:  $\geq 75$  mm (2.95 in)

## Measuring systems

### Built-on optoelectronic rotary encoders Incremental encoders

#### Function

Incremental encoder (sin/cos 1 V<sub>pp</sub>/RS422/HTL) with cable and connector, clamp flange or Synchro flange

Incremental encoders deliver a defined number of electrical pulses per revolution, which represent the measurement of the traveled distance or angle.

Incremental encoders operate on the principle of optoelectronic scanning of dividing discs with the transmitted light principle. The light source is a light emitting diode (LED). The light-dark modulation generated as the encoder shaft rotates is picked up by photoelectronic elements. With an appropriate arrangement of the line pattern on the dividing disk connected to the shaft and the fixed aperture, the photoelectronic elements provide two trace signals A and B at 90° to one another, as well as a reference signal R. The encoder electronics amplify these signals and convert them into different output levels.

The following output levels are available:

- Analog signals sin/cos with 1 V<sub>pp</sub> level  
Better resolution can be achieved for encoders with sinusoidal signals by interpolating them in the higher-level controller.
- RS422 difference signals (TTL)  
In the case of RS422 incremental encoders (TTL), the resolution can be improved by a factor of four by means of edge evaluation.
- HTL (High Voltage Transistor Logic)  
Encoders with HTL interfaces are designed for applications with digital inputs with 24 V levels.

<sup>1)</sup> Universal integrated cable outlet for axial and radial outlet direction.

# SINAMICS S120 drive system

## Measuring systems

### Built-on optoelectronic rotary encoders Absolute encoders

#### Function

Absolute encoders with SSI/EnDat and PROFIBUS DP at the top, and DRIVE-CLiQ and PROFINET IO at the bottom

Absolute encoders (absolute shaft encoders) are designed on the same scanning principle as incremental encoders, but have a greater number of tracks. For example, if there are 13 tracks, then  $2^{13} = 8192$  steps are coded in the case of single-turn encoders. The code used is a one-step code (gray code) which prevents any scanning errors from occurring.

After switching on the machine, the position value is transferred immediately to the controller. There is no need for homing.

DRIVE-CLiQ, SSI and EnDat absolute encoders are of advantage in time-critical applications.

In plants with a large number of encoders, encoders with PROFIBUS DP or PROFINET IO are more advantageous due to the reduced wiring overhead. PROFIBUS DP encoders are programmable and support isochronous mode with direct data exchange. The encoders with PROFINET IO are also parameterizable, additionally have two ports and support the RT and IRT operating modes.

#### Single-turn encoders

Single-turn encoders divide one revolution (360 degrees mechanical) into a specific number of steps, e.g. 8192. A unique code word is assigned to each position. After 360 degrees the position values are repeated.

#### Multi-turn encoders

Multi-turn encoders also record the number of revolutions, in addition to the absolute position within one revolution. To do this, further code discs which are coupled via gear steps with the encoder shaft are scanned. When evaluating 12 additional tracks, this means that  $2^{12} = 4096$  revolutions can be coded.

# SINAMICS S120 drive system

## Measuring systems

### Built-on optoelectronic rotary encoders

#### Accessories

## Overview

Couplings and clamps

### Couplings and clamps

Couplings and clamps are available as mounting accessories for the built-on rotary encoders. The clamps are used to fix the encoders with Synchro flange.

### Signal connector as mating connector

A signal connector is available as mating connector for encoders with flange outlet or with cable and connector. The connector with 12 contacts is suitable for all incremental encoders. The connector with 17 contacts is suitable for absolute encoders with EnDat.

### Signal connector

A signal connector is available as replacement for encoders with cable and connector.

### Feed motors and direct drives

The applications for the SIMOTICS S-1FT7/S-1FK7/L-1FN3/L-1FN6/T-1FW6 motors are extremely diverse.

On machine tools, they are designated and used as feed motors.

On production machines e.g. printing, packaging and textile machines, they are designated as synchronous servomotors.

**Core types** can be supplied for certain motor types. These core types can be express delivered as replacement motors in the event of plant outages and offer the advantage of a quicker spare parts supply. For this reason, core types should be used for configuration wherever possible.

The selection and ordering data for the SINAMICS S120 Motor Modules are based on the booksize format by way of example. Other formats are also possible. The SIZER configuration tool is available for detailed configuration.

<sup>1)</sup> Core type: IP65.

<sup>2)</sup> Degree of protection of the motor is determined by the design of the motor's installation in the machine. Minimum requirement: IP23.

### Main spindle motors

The applications for SIMOTICS M-1PH8/M-1FE1/M-1PH2 motors and 2SP1 motor spindles are extremely diverse.

In machine tools, they are usually designated and used as main spindle motors.

In production machines, such as printing, packaging and re-forming machines, they are used as high-output main motors.

The selection and ordering data for the SINAMICS S120 Motor Modules are based on the booksize format by way of example. Blocksize and chassis formats are also possible. The detailed configuration is performed using the SIZER configuration tool.

# Introduction

## Technical definitions for AC motors

### Overview

#### Regulations, standards and specifications

The motors comply with the appropriate standards and regulations, see table below.

As a result of the fact that in many countries the national regulations have been completely harmonized with the international IEC 60034-1 recommendation, there are no longer any differences with respect to coolant temperatures, temperature classes and temperature rise limits.

|                                                                         |                       |
|-------------------------------------------------------------------------|-----------------------|
| General specifications for rotating electrical machines                 | IEC 60034-1           |
| Terminal designations and direction of rotation for electrical machines | IEC 60034-8           |
| Types of rotating electrical machines                                   | IEC 60034-7           |
| Cooling methods of rotating electrical machines                         | IEC 60034-6           |
| Degrees of protection of rotating electrical machines                   | IEC 60034-5           |
| Vibration severity of rotating electrical machines                      | IEC 60034-14          |
| Noise limit values for rotating electrical machines                     | IEC 60034-9           |
| Cylindrical shaft extensions for electrical machines                    | DIN 748-3/IEC 60072-1 |

The motors listed below are UL-approved by Underwriters Laboratories Inc. and also comply with Canadian cUR standards: 1FE1/1FK7/1FT7/1FN3/1FN6/1FW6/1PH8 (without brake).

#### Degrees of protection for AC motors

A suitable degree of protection must be selected to protect the machine against the following hazards depending on the relevant operating and environmental conditions:

- Ingress of water, dust and solid foreign objects,
- contact with or approach to rotating parts inside a motor and
- contact with or approach to live parts.

Degrees of protection of electric motors are specified by a code. This comprises 2 letters, 2 digits and, if required, an additional letter.

#### IP (International Protection)

Code letter designating the degree of protection against contact and the ingress of solid foreign objects and water

#### 0 to 6

1st digit designating the degree of touch protection and protection against ingress of solid foreign objects

#### 0 to 8

2nd digit designating the degree of protection against ingress of water (no oil protection)

#### W, S and M

Additional code letters for special degrees of protection

Most motors are supplied with the following degrees of protection:

| Motor             | Degree of protection     | 1st digit: Touch protection                    | Protection against the ingress of solid foreign objects                        | 2nd digit: Protection against water                          |
|-------------------|--------------------------|------------------------------------------------|--------------------------------------------------------------------------------|--------------------------------------------------------------|
| Internally cooled | <b>IP23</b>              | Protection against finger contact              | Protection against medium-sized, solid foreign objects above 12 mm (0.47 in) Ø | Protection against spray water up to 60° from the vertical   |
| Surface-cooled    | <b>IP54</b>              | Complete protection against accidental contact | Protection against harmful dust deposits                                       | Splash water from any direction                              |
|                   | <b>IP55</b>              |                                                |                                                                                | Jet water from any direction                                 |
|                   | <b>IP64</b>              | Complete protection against accidental contact | Protection against dust ingress                                                | Splash water from any direction                              |
|                   | <b>IP65<sup>1)</sup></b> |                                                |                                                                                | Jet water from any direction                                 |
|                   | <b>IP67<sup>1)</sup></b> |                                                |                                                                                | Motor under defined pressure and time conditions under water |

#### Recommended degrees of protection for AC motors

When cooling lubricants are used, protection against water alone is inadequate. The IP rating should only be considered here as a guideline. The motors may have to be protected by suitable covers. Attention must be paid to providing suitable sealing of the motor shaft for the selected degree of protection for the motor (for 1FT7: degree of protection IP67 and flange 0).

The table can serve as a decision aid for selecting the proper degree of protection for motors. A permanent covering of liquid on the flange must be avoided when the motor is mounted with the shaft extension facing upwards IM V3/IM V19/IM V6/IM V35.

|                                                   | Liquids | General workshop environment | Water; gen. cooling lubricant (95 % water, 5 % oil) |
|---------------------------------------------------|---------|------------------------------|-----------------------------------------------------|
| <b>Effect</b>                                     |         |                              |                                                     |
| Dry                                               |         | IP64                         | –                                                   |
| Water-enriched environment/<br>increased humidity |         | –                            | IP64                                                |
| Mist                                              |         | –                            | IP65                                                |
| Spray                                             |         | –                            | IP65                                                |
| Jet                                               |         | –                            | IP67                                                |
| Splash/brief immersion/constant inundation        |         | –                            | IP67                                                |

<sup>1)</sup> DIN VDE 0530 Part 5 or EN 60034 Part 5 specifies that there are only 5 degrees of protection for the first digit code and 8 degrees of protection for the second digit code in relation to rotating electrical machinery. However, IP6 is included in DIN 40050 which generally applies to electrical equipment.

#### Vibration severity and vibration severity grade A according to IEC 60034-14

The vibration severity is the RMS value of the vibration velocity (frequency range from 10 to 1000 Hz). The vibration severity is measured using electrical measuring instruments in compliance with DIN 45666.

The values indicated refer only to the motor. These values can increase as a result of the overall system vibrational behavior due to installation.

Vibration severity limit values for shaft heights 20 to 132

The speeds of 1800 rpm and 3600 rpm and the associated limit values are defined in accordance with IEC 60034-14. Speeds of 4500 rpm and 6000 rpm and the specified values are defined by the motor manufacturer.

The motors maintain vibration severity grade A up to rated speed.

Vibration severity limit values for shaft heights 160 to 355

### Overview (continued)

#### Balancing in accordance with DIN ISO 8821

In addition to the balance quality of the motor, the vibration quality of motors with mounted belt pulleys and coupling is essentially determined by the balance quality of the mounted component.

If the motor and mounted component are separately balanced before they are assembled, then the process used to balance the belt pulley or coupling must be adapted to the motor balancing type. The following different balancing methods are used on motors of types SIMOTICS M-1PH8:

- Half-key balancing
- Full-key balancing
- Plain shaft extension

The letter H (half key) or F (full key) is printed on the shaft extension face to identify a half-key balanced or a full-key balanced SIMOTICS M-1PH8 motor.

SIMOTICS S-1FT7/1FK7 motors with feather key are always half-key balanced.

In general, motors with a plain shaft are recommended for systems with the most stringent vibrational quality requirements. For full-key balanced motors, we recommend belt pulleys with two opposite keyways, but only one feather key in the shaft extension.

#### Vibration stress, immitted vibration values

The following maximum permissible vibration stress limits at full reliability performance apply only to SIMOTICS S-1FT7/1FK7 permanent-magnet servomotors.

Vibration stress in accordance with DIN ISO 10816:

- 1 g at 20 Hz to 2 kHz

For all main motors of type SIMOTICS M-1PH8, the following limits are valid for (immitted) vibration values introduced into the motor from outside:

| Vibration frequency | Vibration values for 1PH808/1PH810/1PH813/1PH816 |                                                        |
|---------------------|--------------------------------------------------|--------------------------------------------------------|
| < 6.3 Hz            | Vibration displacement $s$                       | $\leq 0.16 \text{ mm}$<br>(0.006 in)                   |
| 6.3 ... 250 Hz      | Vibration velocity $V_{\text{rms}}$              | $\leq 4.5 \text{ mm/s}$<br>(0.18 in/s)                 |
| > 250 Hz            | Vibration acceleration $a$                       | $\leq 10 \text{ m/s}^2$<br>(32.8 ft/s <sup>2</sup> )   |
| Vibration frequency | Vibration values for 1PH818/1PH822/1PH828/1PH835 |                                                        |
| < 6.3 Hz            | Vibration displacement $s$                       | $\leq 0.25 \text{ mm}$<br>(0.099 in)                   |
| 6.3 ... 63 Hz       | Vibration velocity $V_{\text{rms}}$              | $\leq 7.1 \text{ mm/s}$<br>(0.28 in/s)                 |
| > 63 Hz             | Vibration acceleration $a$                       | $\leq 4.0 \text{ m/s}^2$<br>(13.12 ft/s <sup>2</sup> ) |

#### Coolant temperature (ambient temperature) and installation altitude for motors with natural cooling and forced ventilation

Operation (unrestricted): -15 ... +40 °C (+5 ... 104 °F)

The rated power (rated torque) is applicable to continuous duty (S1) in accordance with EN 60034-1 at rated frequency, a coolant temperature of 40 °C (104 °F) and an installation altitude of 1000 m (3281 ft) above sea level.

Apart from the SIMOTICS M-1PH8 motors, all motors are designed for temperature class 155 (F) and utilized in accordance with temperature class 155 (F). The SIMOTICS M-1PH8 motors are designed for temperature class 180 (H). For all other conditions, the factors given in the table below must be applied to determine the permissible output (torque).

The coolant temperature and installation altitude are rounded to 5 °C (41 °F) and 500 m (1640 ft) respectively.

| Installation altitude above sea level | Coolant temperature (ambient temperature) |                              |                |                |
|---------------------------------------|-------------------------------------------|------------------------------|----------------|----------------|
| m (ft)                                | < 30 °C (86 °F)                           | 30 ... 40 °C (86 ... 104 °F) | 45 °C (113 °F) | 50 °C (122 °F) |
| 1000 (3281)                           | 1.07                                      | 1.00                         | 0.96           | 0.92           |
| 1500 (4922)                           | 1.04                                      | 0.97                         | 0.93           | 0.89           |
| 2000 (6562)                           | 1.00                                      | 0.94                         | 0.90           | 0.86           |
| 2500 (8203)                           | 0.96                                      | 0.90                         | 0.86           | 0.83           |
| 3000 (9843)                           | 0.92                                      | 0.86                         | 0.82           | 0.79           |
| 3500 (11484)                          | 0.88                                      | 0.82                         | 0.79           | 0.75           |
| 4000 (13124)                          | 0.82                                      | 0.77                         | 0.74           | 0.71           |

# Introduction

## Technical definitions for AC motors

### Overview (continued)

#### Duty types S1 and S6 in accordance with EN 60034-1

##### S1: Continuous duty

Duty cycle under constant load condition of sufficient duration to establish thermal equilibrium.

**Designation: S1**  
Output specification (torque).

G\_DA65\_EN\_00067

##### S6: Continuous duty with intermittent loading

Duty cycle comprising a sequence of identical duty cycles, each of which consists of a period of constant load followed by an interval at no load. There are no de-energized intervals.

**Designation:**  
e.g.: S6 - 40 %, 85 kW.  
(114 HP).

$$t_r = \frac{t_B}{t_B + t_L}$$

$$t_s = 10 \text{ min}$$

G\_DA65\_EN\_00068

#### Rated torque

The torque supplied on the shaft is indicated in Nm (lb<sub>f</sub>-ft) in the selection and ordering data.

$$M_{\text{rated}} = 9.55 \times P_{\text{rated}} \times \frac{1000}{n_{\text{rated}}}$$

$P_{\text{rated}}$  Rated power in kW  
 $n_{\text{rated}}$  Rated speed in rpm  
 $M_{\text{rated}}$  Rated torque in Nm

$$M_{\text{rated}} = P_{\text{rated}} \times \frac{5250}{n_{\text{rated}}}$$

$P_{\text{rated}}$  Rated power in HP  
 $n_{\text{rated}}$  Rated speed in rpm  
 $M_{\text{rated}}$  Rated torque in lb<sub>f</sub>-ft

#### DURIGNIT IR 2000 insulation

The DURIGNIT IR 2000 insulation system consists of high-quality enamel wires and insulating sheeting in conjunction with solvent-free resin impregnation.

The insulating material system ensures that these motors will have a high mechanical and electrical stability, high service value and a long service life.

The insulating system protects the winding to a large degree against aggressive gases, vapors, dust, oil, and increased air humidity. It can withstand the usual vibration stressing.

#### Characteristic curves

Torque characteristic of a synchronous motor operating on a converter with field weakening (example)

|                       | Explanations                                            |
|-----------------------|---------------------------------------------------------|
| $n_{\text{rated}}$    | Rated speed                                             |
| $n_{\text{max Inv}}$  | Maximum permissible electric speed limit                |
| $n_{\text{max mech}}$ | Maximum permissible mechanical speed limit              |
| $M_0$                 | Static torque                                           |
| $M_{\text{rated}}$    | Rated torque at rated speed                             |
| $M_{\text{max Inv}}$  | Achievable maximum torque with recommended motor module |
| $M_{\text{max}}$      | Maximum permissible torque                              |

### Overview (continued)

#### Motor protection

The KTY84-130 temperature sensor is used to measure the motor temperature for converter-fed motor operation.

This sensor is a semi-conductor that changes its resistance depending on temperature in accordance with a defined curve.

Siemens converters determine the motor temperature using the resistance of the temperature sensor.

Their parameters can be set for specific alarm and shutdown temperatures.

The KTY84-130 temperature sensor is embedded in the winding overhang of the motor like a PTC thermistor.

The sensor is evaluated in the SINAMICS S120 drive system as a standard function.

If the motors are operated on converters that do not feature a KTY84 evaluation circuit, the temperature can be measured with the external 3RS1040 temperature monitoring relay.

For a detailed description, please see Catalog IC 10 or Siemens Industry Mall:

[www.siemens.com/industrymall](http://www.siemens.com/industrymall)

#### Paint finish (for possible optional version)

Motors without a paint finish have an impregnated resin coating. Motors with primer have corrosion protection.

All motors can be painted over with commercially available paints. Up to 2 additional paint coats are permissible.

| Finish               | Suitability of paint finish for climate group in accordance with IEC 60721, Part 2-1                                                                                                                                                            |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Paint finish         | <b>Moderate</b> (expanded) for indoor and outdoor installation with roof protection<br>Briefly Up to 150 °C (302 °F)<br>Continuously Up to 120 °C (248 °F)                                                                                      |
| Special paint finish | <b>Worldwide</b> (expanded) for outdoor installation<br>Briefly Up to 150 °C (302 °F)<br>Continuously Up to 120 °C (248 °F)<br>Also for aggressive atmospheres up to 1 % acid and alkali concentration or permanent dampness in sheltered rooms |

# Introduction

## Technical definitions for AC motors

### Overview (continued)

#### Built-in encoder systems without DRIVE-CLiQ interface

For motors without an integrated DRIVE-CLiQ interface, the analog encoder signal in the drive system is converted to a digital signal. For these motors as well as external encoders, the encoder signals must be connected to SINAMICS S120 via Sensor Modules.

#### Built-in encoder systems with DRIVE-CLiQ interface

For motors with an integrated DRIVE-CLiQ interface, the analog encoder signal is internally converted to a digital signal. There is no further conversion of the encoder signal in the drive system. The motor-internal encoders are the same encoders that are used for motors without a DRIVE-CLiQ interface. Motors with a DRIVE-CLiQ interface simplify the commissioning and diagnostics, for example, due to automatic identification of the encoder system.

The different encoder types, incremental, absolute or resolver, are uniformly connected with one type of MOTION-CONNECT DRIVE-CLiQ cable.

#### Short designations for the encoder systems

The first letters of the short designation define the encoder type. This is followed by the resolution in signals per revolution if S/R is specified (for encoders without DRIVE-CLiQ interface) or in bits if DQ is specified (for encoders with DRIVE-CLiQ interface).

| Type                        | Resolution/interface                                                 |                                                                                         |
|-----------------------------|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| AM<br>AS<br>IC<br>IN<br>HTL | xxxxSR                                                               | Encoder <u>without</u> DRIVE-CLiQ interface<br>Resolution = xxxx signals per revolution |
| AM<br>AS<br>IC<br>IN<br>R   | xxDQ<br>or<br>xxDQI                                                  | Encoder <u>with</u> DRIVE-CLiQ interface<br>Resolution = xx bits ( $2^{xx}$ )           |
| AM                          | Absolute encoder, multi-turn                                         |                                                                                         |
| AS                          | Absolute encoder, single-turn                                        |                                                                                         |
| IC                          | Incremental encoder sin/cos with commutation position C and D tracks |                                                                                         |
| IN                          | Incremental encoder sin/cos without commutation position             |                                                                                         |
| HTL                         | Incremental encoder with HTL signal                                  |                                                                                         |
| R                           | Resolver                                                             |                                                                                         |

Not every encoder is available for every motor frame size.

– Not possible

<sup>1)</sup> Not for 1FW3 motors.

### Overview (continued)

#### Absolute encoder, multi-turn

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. An internal measuring gearbox enables it to differentiate 4096 revolutions.

So with a ball screw, for example, the absolute position of the slide can be determined over a long distance.

Absolute encoder, multi-turn

#### Absolute encoder, single-turn

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. In contrast to the multi-turn absolute encoder, it has no measuring gearbox and can therefore only supply the position value within one revolution. It does not have a traversing range.

#### Absolute encoders without DRIVE-CLiQ interface

|           |                                                                               |
|-----------|-------------------------------------------------------------------------------|

<sup>1)</sup> Not for absolute encoder, single-turn AS

<sup>2)</sup> The single-turn absolute encoder is used for the previous incremental encoders.

# Introduction

## Technical definitions for AC motors

### Overview (continued)

#### Incremental encoder

This encoder senses relative movements and does not supply absolute position information. In combination with evaluation logic, a zero point can be determined using the integrated reference mark, which can be used to calculate the absolute position.

#### Incremental encoder IC/IN (sin/cos)

The encoder outputs sine and cosine signals. These can be interpolated using evaluation logic (usually 2048 points) and the direction of rotation can be determined.

In the version with DRIVE-CLiQ interface, this evaluation logic is already integrated in the encoder.

#### Commutation position

The position of the rotor is required for commutation of a synchronous motor. Encoders with commutation position (also termed C and D tracks) detect the angular position of the rotor.

Incremental encoder IC/IN (sin/cos), commutation position only for IC

#### Incremental encoder HTL

The encoder outputs square wave signals. The direction of rotation can be evaluated by means of edge evaluation.

The resolution is four times the number of encoder pulses. This encoder type is preferred for long signal cables.

Incremental encoder HTL

#### Incremental encoders without DRIVE-CLiQ interface

| Incremental signals per revolution |             |
| • Resolution (HTL)                 | 2048/1024   |
| • Reference signal                 | 1           |

<sup>1)</sup> Instead of the incremental encoder IC22DQ, the single-turn absolute encoder AS24DQ1 is used for SIMOTICS S-1FK7/1FT7.

### Overview (continued)

#### Resolver

The number of sine and cosine periods per revolution corresponds to the number of pole pairs of the resolver. In the case of a 2-pole resolver, the evaluation electronics may output an additional zero pulse per encoder revolution. This zero pulse ensures a unique assignment of the position information in relation to an encoder revolution. A 2-pole resolver can therefore be used as a single-turn encoder.

2-pole resolvers can be used for motors with any number of pairs of poles. For multi-pole resolvers, the motor and resolver must always have the same numbers of pole pairs. The resolution is correspondingly higher than with 2-pole resolvers.

#### Resolvers without DRIVE-CLiQ interface<sup>1)</sup>

Resolver p = 1 2-pole resolver

Resolver p = 3 6-pole resolver

Resolver p = 4 8-pole resolver

#### Resolvers with DRIVE-CLiQ interface

R15DQ Resolver 15 bit  
(resolution 32768, internal, multi-pole)

R14DQ Resolver 14 bit  
(resolution 16384, internal, 2-pole)

#### Technical specifications

Angular error

- Resolver p = 1 and R14DQ  $\pm 840''^{(2)}$
- Resolver p = 3 and R15DQ  $\pm 420''$
- Resolver p = 4 and R15DQ  $\pm 240''$

#### Resolvers without DRIVE-CLiQ interface

Excitation voltage, rms 2 ... 8 V

Excitation frequency 5 ... 10 kHz

Output signals  $U_{\text{sine track}} = r \times U_{\text{excitation}} \times \sin \alpha$   
 $U_{\text{cosine track}} = r \times U_{\text{excitation}} \times \cos \alpha$   
 $\alpha = \arctan (U_{\text{sine track}} / U_{\text{cosine track}})$

Transmission ratio  $r = 0.5 \pm 5 \%$

#### Resolvers with DRIVE-CLiQ interface

Supply voltage 24 V

- Resolution  $2^{15}/2^{14}$  bit

<sup>1)</sup> Output signals:  
 2-pole resolver: 1 sin/cos signal per revolution  
 6-pole resolver: 3 sin/cos signals per revolution  
 8-pole resolver: 4 sin/cos signals per revolution

<sup>2)</sup> For the 1FK701/1FK702 motors: 1200''

## Feed motors

### SIMOTICS S servomotors for SINAMICS S120

#### SIMOTICS S-1FT7 synchronous motors

##### Overview

SIMOTICS S-1FT7 motors forced ventilation, water cooling and natural cooling

The SIMOTICS S-1FT7 servomotors are permanent-magnet synchronous motors with very compact dimensions and an optically attractive design.

The 1FT7 motors fulfill the highest demands on dynamic performance, speed setting range, shaft and flange accuracy. They are equipped with state-of-the-art encoder technology and optimized for operation on our fully digital drive and control systems.

Natural cooling, forced ventilation or water cooling are available as cooling types. With the natural cooling method, heat is dissipated through the surface of the motor, whereas with the forced ventilation method, heat is forced out by means of built-on fans. Maximum cooling, and thus maximum power ratings can be achieved using water cooling.

##### Benefits

- Excellent dynamic performance in a wide speed range thanks to high overload capability  $\geq 4 \times M_0$  with natural cooling
- Wide speed setting range
- High robustness against vibratory and shock loads thanks to vibration-isolated encoder mounting
- High degree of protection – allows operation even with demanding ambient conditions
- Quick and easy mounting due to cross-profile and rotatable connectors with quick-release locks
- Zero-backlash holding brake
- Extremely high efficiency
- 1FT7 Compact motors have a low torque ripple and are therefore especially suited for use in machine tools that require maximum surface quality and optimum machining quality. Their compact dimensions permit mounting in confined spaces.
- 1FT7 High Dynamic motors have very low rotor moments of inertia to achieve extremely good dynamic performance and very short cycle times. The 1FT7 High Dynamic motors are available with forced ventilation and with water cooling, they possess high continuous performance capabilities.

##### Application

- High-performance machine tools
- Machines with stringent requirements in terms of dynamic performance and precision, e.g.:
  - Packaging machines
  - Foil extractor machines
  - Printing machines
  - Handling equipment

When ordering a motor with options, **-Z** should be added to the order number.

**N05**  
Non-standard shaft extension (dimensions as for 1FT5 motors)

For the following order numbers, naturally cooled 1FT7 servomotors (Compact) can be delivered with the shaft dimensions compatible with 1FT5 motors:

- 1FT7034-5A.71-.... 1FT7042-5A.71-....
- 1FT7062-5A.71-.... 1FT7064-5A.71-....
- 1FT7082-5A.71-.... 1FT7084-5A.71-....
- 1FT7086-5A.71-.... 1FT7102-5A.71-....
- 1FT7105-5A.71-.... 1FT7108-5A.71-....

Shaft dimensions (diameter x length) according to shaft height (SH) with Option N05:

- SH 36: 11 × 23 mm (0.43 × 0.91 in)
- SH 48: 14 × 30 mm (0.55 × 1.18 in)
- SH 63: 19 × 40 mm (0.75 × 1.57 in) (not compatible with flange)
- SH 80: 24 × 50 mm (0.94 × 1.97 in)
- SH 100: 32 × 58 mm (1.26 × 2.28 in)

<sup>1)</sup> Shaft extension run-out, concentricity of centering ring and shaft and perpendicularity of flange to shaft.

<sup>2)</sup> The single-turn absolute encoder is applied for the previously used incremental encoders.

# Feed motors

To select the type of construction and degree of protection, see Technical definitions.

Some 1FT7 Compact motors are available as core types. These core types can be express-delivered as replacement motors in the event of plant outages and offer the advantage of a quicker spare parts supply. For this reason, core types should be used for configuration wherever possible.

More information about cables can be found under MOTION-CONNECT connection systems.

<sup>1)</sup> Optimum efficiency in continuous duty.

<sup>2)</sup> With default setting of the pulse frequency.

<sup>3)</sup> The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

<sup>4)</sup>  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$

More information about cables can be found  
under MOTION-CONNECT connection systems.1) These values refer to  $n = 3500$  rpm.2) These values refer to  $n = 4000$  rpm.3) These values refer to  $n = 4500$  rpm.4) These values refer to  $n = 5500$  rpm.

5) Optimum efficiency in continuous duty.

6) With default setting of the pulse frequency.

7) The current carrying capacity of the power cables complies with EN 60204-1 for installation type C, for continuous duty at an ambient air temperature of 40 °C (104 °F).

8)  $P_{calc} [kW] = \frac{M_0 [Nm] \times n_{rated}}{9550}$   $P_{calc} [hp] = \frac{M_0 [lb-ft] \times n_{rated}}{5250}$
