DICTIONARY of FOOD COMPOUNDS with CD-ROM

Additives, Flavors, and Ingredients

Edited by
SHMUEL YANNAI

CHAPMAN & HALL/CRC

A CRC Press Company
Boca Raton London New York Washington, D.C.

CAUTION

Treat all chemical substances as if they have dangerous properties. The publisher makes no representation, expressed or implied, with regard to the accuracy of the information contained in this Dictionary, and cannot accept any legal responsibility or liability for any errors or omissions that may be made.

The specific information in this publication on the hazardous and toxic properties of certain substances is included to alert the reader to possible dangers associated with the use of these compounds. The absence of such information should not, however, be taken as an indication of safety in use or misuse.

Library of Congress Cataloging-in-Publication Data

Catalog record is available from the Library of Congress

This book contains information obtained from authentic and highly regarded sources. Reprinted material is quoted with permission, and sources are indicated. A wide variety of references are listed. Reasonable efforts have been made to publish reliable data and information, but the author and the publisher cannot assume responsibility for the validity of all materials or for the consequences of their use.

Neither this book nor any part may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying, microfilming, and recording, or by any information storage or retrieval system, without prior permission in writing from the publisher.

The consent of CRC Press LLC does not extend to copying for general distribution, for promotion, for creating new works, or for resale. Specific permission must be obtained in writing from CRC Press LLC for such copying.

Preface

For some years, those involved in food chemistry and technology have felt the need for a comprehensive and well-organised reference source documenting the whole range of substances on which they may need information during their day-to-day work. While there are many valuable compilations and tabulations of particular areas (e.g., permitted food additives or natural flavourings), there has been nothing available that is truly comprehensive. In addition, the existing reference works have mostly evolved as traditional books, with their associated shortcomings in terms of indexing and expense of updating.

With the increasing and sometimes contradictory demands of the consumer market today, the need for the best up-to-date and accurate information has never been greater. This is perhaps not the place to digress into the debate on "Chemicals in Food;" anyone in the position of reading this preface will be quite aware of most of the issues involved, and will have his or her own views. What is certain, however, is that whatever direction one approaches the debate from, it is a sterile and unproductive one unless there is good information about the true state of the science. And that science is of course by no means limited to food technology. Any participant in the debate who is ignorant about the effects of the natural products in the foods we eat is seriously misinformed.

Chapman & Hall in its role as a chemical information specialist is uniquely able to provide a technology capable of aiding the compilation and publication of such a comprehensive reference source. The company's experience in database publishing in chemistry goes back to the late 1970s when compilation of the first electronic edition of the *Dictionary of Organic Compounds* was begun. Since that time, a series of high-quality searchable data compilations has appeared at regular intervals. In due course, it only remained to put this technical expertise together with the specialist knowledge of an experienced international Editorial Board with overall responsibility for content, and a team of contributors with knowledge of particular areas of food components.

The resulting *Dictionary of Food Compounds* is available both in hard copy and electronically as a CD-ROM product. Each has its own advantages. There is nothing to rival the ease of consulting a book version for quick queries and for browsing to get an overall view of the whole field. On the other hand, the electronic version is searchable by chemical substructure as well as text and, for obvious reasons, is much more easily updated so that the user can get a very rapid summary of new developments in the science. The *Dictionary* is aimed not only at food scientists and technologists, but at the wide range of people whose work brings them into contact with the regulatory aspects of food supply and monitoring.

The book and CD-ROM versions are complementary. The important thing for the user to be assured of is that the *Dictionary of Food Compounds* is an ongoing project which the Publishers hope and expect will become a central feature of the information needs of everyone involved in food.

Every effort has been taken to ensure the accuracy of the information contained in DFC. Any errors or omissions should be communicated to the Publishers, who will also be pleased to receive any comments about the coverage, and especially suggestions for its expansion.

Introduction

Users interested in more detailed factual information on topics outlined below are referred to *The Organic Chemist's Desk Reference* (Rhodes, P.A., Chapman & Hall, 1995).

1. USING DFC

The arrangement of entries is alphabetical by name. The criteria governing the choice of entry name are described below. Many compounds in DFC are present as derivatives of a parent. The CD-ROM version can be searched by all names given throughout the dictionary, whether entry names, synonyms or derivative names.

Every entry is assigned a DFC number to assist ready location. The DFC number consists of a letter of the alphabet followed by a number, e.g., A-124. All index entries refer to the DFC number.

2. COMPOUND SELECTION AND PRESENTATION

The selection of compounds for DFC is broad. Included are all compounds or group of compounds of interest or potential interest to the food industry in its widest connotation. Compounds need not have been exactly defined structurally to be included.

A full description of the scope of compounds included can be gained by perusing the headings in the Type of Compound Index, since virtually every compound or group of compounds included is listed under at least one of the headings.

Printed DFC contains a number of derivatives that are not of direct food interest, but are included because they have been used for chemical characterisation of the main entry compound. However, the number of these is strictly limited. In contrast, the version of an entry on the CD-ROM, where space is not a limitation, is the full version as present on the Chapman & Hall Chemical Database and may include many more derivatives not thought to be of current food interest. When using the CD-ROM, the possibilities for flexible searching are such that the portion of the entry most relevant to food science can rapidly be homed in on.

DFC contains many natural products known to occur in food plants for which no specific food-related information, such as flavour or toxicity, appears to be available. In such cases, the decision to include them has been based on the species information given in the entry. If one or more of the species recorded is a food plant or other food source, the compound has been selected for inclusion in the DFC dataset. The label "food plant" is broadly defined and includes edible wild foods as well as established crop foods, also toxic plants of potential interest to nutritionists. Where there is some doubt about whether a particular plant is of food significance, it has generally been included. The sources used to validate food plant information include the CropSEARCH database (http://www.hort.purdue.edu/newcrop/, Purdue University, US) and the Plants for a Future database (http://www.scs.leeds.ac.uk/pfaf/, Leeds University, UK), and the titles: *World Economic Plants — A Standard Reference* (Wiersema, J.H. and León, B., CRC Press, 1999); *Fenaroli's Handbook of Flavor Ingredients,* 4th ed., (Burdock, G.A., CRC Press, 2002); *Encyclopedia of Food and Color Additives* (Burdock, G.A., CRC Press, 1997); *Handbook of Nutraceuticals and Functional Foods* (Wildman, R.E.C., CRC Press, 2000).

3. THE TYPE OF COMPOUND INDEX

This is a most important feature of DFC. Every compound of food interest included in the dictionary is indexed under at least one heading, but usually two or more. The headings are of six types.

Structural headings (WA) classify naturally occurring food constituents under one of 30 headings according to their chemical structure, such as:

WA 1100 — Natural food colourants (betalaines)
WA 5100 — Food sugars (disaccharides)

Deliberate food additive headings (WC) refer to the various functions performed by such additives, such as:

WC 0700 — Antioxidants
WC 2100 — Curing agent

Food flavour and odour headings (WE) are self-explanatory and may refer to natural, nature-identical or synthetic odours and flavours

Food contaminant headings (WG) classify all undesirable/unintended compounds present in foods, such as:

WG 1000 — Animal feed contaminants
WG 3500 — Food allergens

Food source headings (WI) classify food compounds, both natural and processing-derived, by their food source. Examples are:

WI 1000 — Cereals and bakery products
WI 6000 — Dairy products

Food function headings (WK) are self-explanatory and include for example

WK 1500 — Antimutagenic agents
WK 6500 — Nutriceuticals

Once again, compounds classified under these headings may be natural, synthetic or nature-identical.

On the CD-ROM, a combination of these headings with other types of compound codes provides powerful search possibilities.

4. OTHER SEARCH POSSIBILITIES FROM THE CD-ROM VERSION

Space considerations have precluded the inclusion of indexes other than the Type of Compound Index and the Name Index in the hard-copy version of DFC. These were considered to be the most useful types of indexing for users primarily wishing to locate food-related information. Other types of search (e.g., by molecular formula and/or CAS registry number) are readily carried out on the CD-ROM version, which is also searchable by chemical structure or substructure. Full details of how to do this are given in the CD-ROM Help file.

5. LITERATURE COVERAGE

In compiling this edition, the primary literature has been surveyed to 2001. Any future editions are likely to be in electronic format for ease of updating.

6. ORGANISATION OF ENTRIES

Figure 1 illustrates the format of a typical entry within which the individual types of data have been labelled.

6.1 Chemical names and synonyms

6.1.1 DFC name

The DFC name is that chosen to head each entry and is that which, in the opinion of the Editors, is the one most likely to be known by, and of use to, most readers.

The American spelling "sulf-" is used throughout in preference to the British "sulph-."

DFC does not seek to establish standards of nomenclature, and the adoption of a particular name as entry name does not imply endorsement in any way. However, the DFC dataset was carefully reviewed before publication in order to give a high degree of internal consistency in the choice of entry names.

Users interested in a fuller explanation of nomenclature policy and nomenclature rules in general are referred to *The Organic Chemist's Desk Reference*.

6.1.2 Synonyms

Nearly all entries and derivatives are accompanied by various synonyms. These come from a variety of sources.

Chemical Abstracts Services (CAS) names. CAS assigns a unique name to every chemical substance. Because of the necessity to employ strict nomenclature rules to arrive at such a unique name, CAS names are often cumbersome and, in addition, many CAS parent names are relatively unfamiliar to many potential DFC users (e.g., benzenamine for aniline and 1-methylethyl for isopropyl). If the CAS name is not the entry name, DFC will often give it as a synonym if it is not too cumbersome for effective use.

The names in use by CAS for organic compounds have been largely unchanged since the beginning of the 9th collective index period in 1972 and are followed by the suffix **9CI**. This suffix means that the name is one in use by CAS since 1972 and does not necessarily mean that the compound can be found in the 9th collective index of CAS, which covers 1972 to 1976 only.

Names in use by CAS before 1972 may also be given. Names from the 8th collective index period (1967 to 1971) are usually suffixed **8CI**, but names used before 1967 are not specially labelled.

Other chemical names not corresponding to any found in CAS also may be given; these have either been found in the chemical/food literature or have been added editorially for consistency or clarity. Some compounds, particularly natural products, possess trivial names. A favoured trivial name will appear in boldface.

Trade names, generic names and names allocated by regulatory bodies are invariably given. Their names may be invented names (e.g., for pesticides) or may be serial numbers (e.g., the E numbers). Examples of such bodies are the Flavor and Extract Manufacturers' Association (FEMA) and the EU Commission (E numbers). Also included are those recommended by the British Pharmaceutical Commission as British Approved Names (BAN), the United States Adopted Name Review Board (USAN), the British Standards Institute (BSI) or the World Health Organisation as an International Nonproprietary Name (INN). No distinction is made between International Nonproprietary Names which are currently proposed (pINN) and those which are recommended (rINN).

Names which are known to be duplicated within the chemical literature are marked with the symbol ‡.

6.2 CAS Registry Numbers

CAS numbers are identifying numbers allocated to each distinctly definable chemical substance indexed by CAS since 1965 (plus some retrospective allocation of numbers by CAS to compounds from earlier index periods). The numbers have no chemical significance, but they provide a label for each substance independent of any system of nomenclature. They are extensively used for exchanging information between individuals and databases. The numbers take the form NNNNNN-NN-R, where the total number of digits is five or more and R is a check digit.

For practical purposes, CAS numbers have certain shortcomings arising from their free allocation, resulting in one substance having more than one potential number. Duplication may arise for one of several reasons to do with

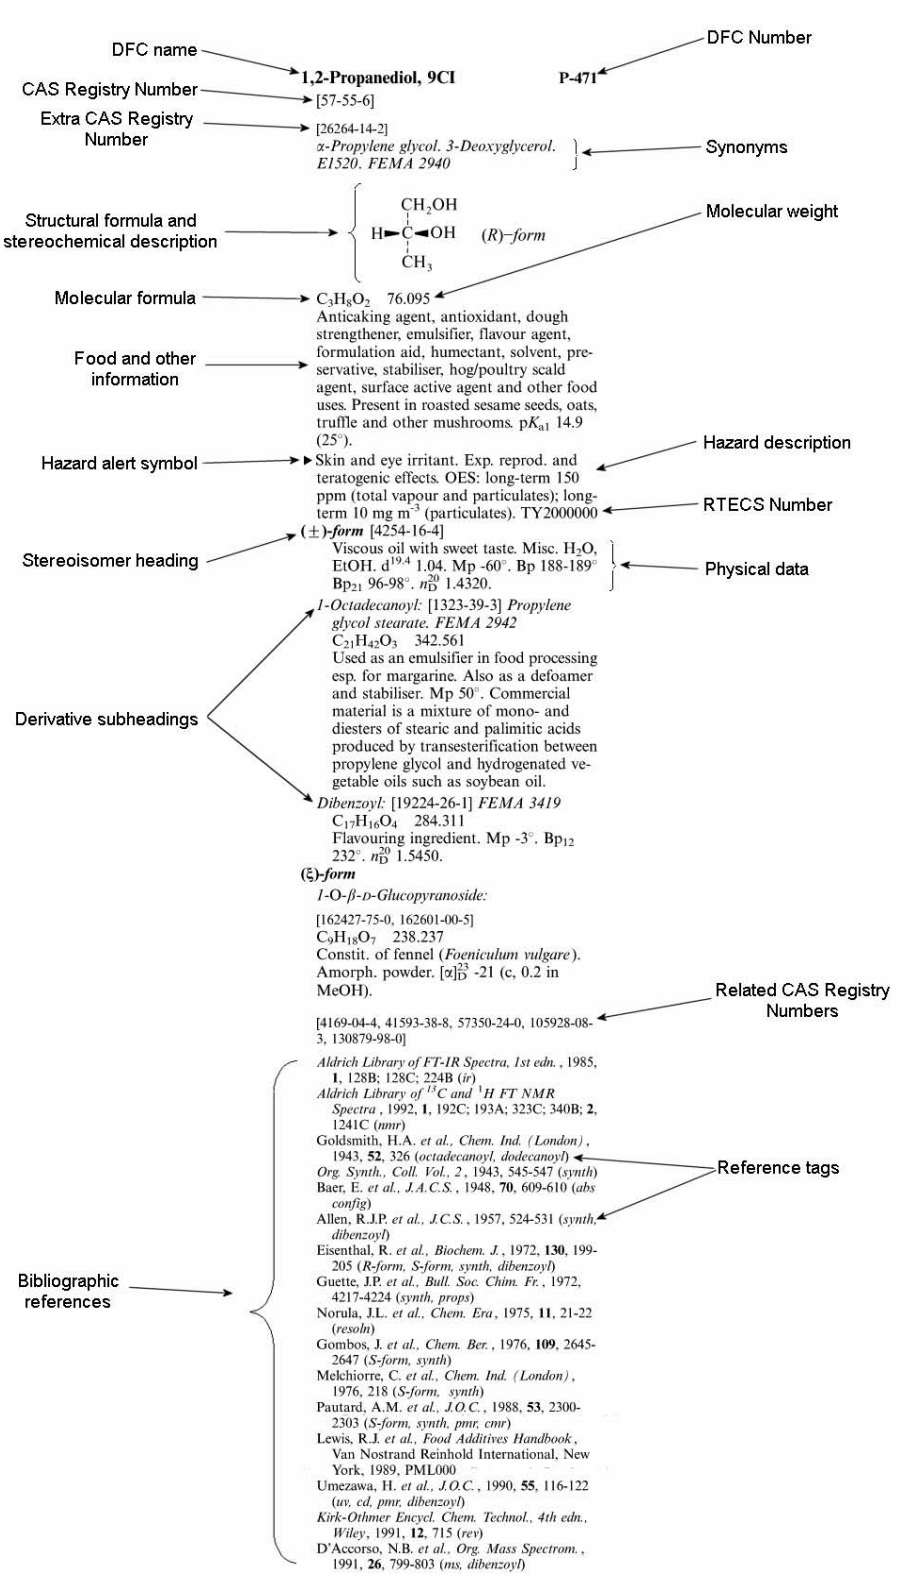

FIGURE 1 The format of a typical entry in DFC.

the detailed chemistry of the substance (e.g., tautomerism, solvent formation, partially unspecified stereochemistry). There are also replaced numbers. For this reason, DFC entries will often contain one or more *Additional CAS numbers* which may help the user to obtain further information about the substance, especially by online searching.

Some entries in DFC refer to families of compounds, especially natural products. An example is the entry for the group of peptide hormones, Relaxins. Here, general information applies to all the species variants, plus a significant number of additional CAS numbers which may refer to additional members of the group that are less well documented or characterised.

Clearly, the additional CAS numbers given in DFC have to be used with care. Their inclusion in the entry is the result of an editorial decision by the DFC contributor that they refer to what is essentially the same substance, but this decision may be a subjective one. Care has been taken to ensure that the main CAS number given in DFC for each substance is the correct one.

Further information on CAS number allocation policy can be obtained from CAS indexes or *The Organic Chemist's Desk Reference*.

6.3 Structural formulae

Every attempt has been made to present the structures of chemical substances as accurately as possible according to best current practice and recommendations of IUPAC (The International Union of Pure and Applied Chemistry). As much consistency as possible has been aimed at between closely related structures. For example, all sugars are shown as Haworth formulae and, whenever possible in complex structures, the rings are oriented in the standard Haworth convention so that structural comparisons can be quickly made.

6.4 Molecular formula and molecular weight

The elements in the molecular formula are given according to the Hill convention (C, H, then other elements in alphabetical order). The molecular weights given are formula weights (or more strictly, molar masses in Daltons) and are rounded to three places in decimals. In the case of some high molecular mass substances, such as proteins, the value quoted may be that taken from an original literature source and may be an aggregate molar mass.

6.5 Food Information

The information given on the food uses of many of the substances included in DFC is of key importance and has, as far as possible, been based on critical sources. However, in the case of compounds that have become of interest only recently, or for which little information is available, the information may be based on journal references only, in which case the reference will normally be given.

In a few cases, the only information that can be found that a compound is of food-related significance is the fact that the compound has been included in a database such as EAFUS Food Additive Database, and there appears to be no published literature supporting that inclusion. This fact will normally be noted in the entry.

DFC also contains much information on the nonfood uses of compounds. This information is of obvious potential use when it is identified for example as a food contaminant.

6.6 Physical data

DFC gives the following physical characteristics of substances, when available: appearance, melting point, boiling point, optical rotation, density, refractive index, solubility, pKa. All of these fields are searchable by numerical value (including range searching) in the CD-ROM version of DFC.

6.6.1 Appearance

Organic compounds are considered to be colourless unless otherwise stated. Where the compound contains a chromophore which would be expected to lead to visible colour, but no colour is mentioned in the literature, the DFC entry will mention this fact if it has been noticed by the contributor. An indication of crystal form and of recrystallisation solvent is often given but these are imprecise items of data; most compounds can be crystallised from several solvent systems and the crystal form often varies. In the case of the small number of compounds where crystal behaviour has been intensively studied (e.g., pharmaceuticals), it is found that polymorphism is a very common phenomenon and there is no reason to believe that it is not widespread among organic compounds generally.

6.6.2 Melting points and boiling points

The policy followed in the case of conflicting data is as follows:

(a) Where the literature melting points are closely similar, only one figure (the highest or most probable) is quoted.
(b) Where two or more melting points are recorded and differ by several degrees (the most likely explanation being that one sample was impure), the lower figure is given in parentheses, thus Mp 139° (134-135°).
(c) Where quoted figures differ widely and some other explanation such as polymorphism or incorrect identity seems the most likely explanation, both figures are quoted without parentheses, thus Mp 142°, Mp 205-206°.
(d) Known cases of polymorphism or double melting points are noted.

Boiling point determination is less precise than that of melting points and conflicting boiling point data are not usually reported except when there appears to be a serious discrepancy between the different authors.

6.6.3 Optical rotations

These are given wherever possible and normally refer to what the DFC contributor believes to be the best characterised sample of highest chemical and optical purity. Where available, an indication of the optical purity (op) or enantiomeric excess (ee) of the sample measured follows the specific rotation value.

Specific rotations are dimensionless numbers and the degree sign that was formerly universal in the literature has been discontinued.

6.6.4 Densities and refractive indexes

Densities and refractive indexes are now of less importance for the identification of liquids than has been the case in the past, but are quoted for common or industrially important substances, such as solvents, or where no boiling point can be found in the literature.

Densities and refractive indexes are not quoted where the determination appears to refer to an undefined mixture of stereoisomers.

6.6.5 Solubilities

Solubilities are given only where the solubility is unusual for a compound. Typical organic compounds are soluble in the usual organic solvents, such as ether and chloroform, and virtually insoluble in water. The presence of polar groups (OH, NH_2, and especially COOH, SO_3H and NR_3^+) increases water solubility.

6.6.6 pK_a values

pK_a values are given for both acids and bases. The pK_b of a base can be obtained by subtracting its pK_a from 14.17 (at 20°) or from 14.00 (at 25°).

6.7 Spectroscopic data

Many DFC entries include ultraviolet spectra which are presented in the format:

[neutral] λ_{max} 198 (log ε 1.55); 224 (sh) (log ε 0.61); 241 (sh) (log ε 0.55) (H_2O) (Berdy)

where ε is the absorption coefficient for a given UV maxima value (λ_{max}). A description of the solvent conditions used, if reported in the literature, is listed at the beginning and end of the UV data in parentheses. All peak absorptions cited are maxima unless otherwise described, e.g., shoulder/inflection (sh) and end absorption (end). In addition, UV data may be followed by the term "Berdy" or "DEREP" indicating from which database the data originated. The absence of either of these terms implies that the data was abstracted from the primary literature.

On the CD-ROM, all the λ_{max} values are indexed in the UV Maxima field and can be searched for numerically including range searching. Similarly, the solvent data associated with the UV data are indexed in the UV Solvent field.

6.8 Hazard and toxicity information

6.8.1 General

Toxicity and hazard information is highlighted by the symbol ► and has been selected to assist in risk assessments for experimental, manufacturing and manipulative procedures with chemicals.

Physical, ***reactive*** and ***toxic*** properties all contribute to the hazard associated with a particular chemical. As part of the ***physical data***, flash points, explosive limits and autoignition temperatures have been included where appropriate. Flammable classifications, which are based on flash point measurements and boiling points, are also mentioned, and the opportunity has been taken to include UK occupational exposure limits or, for some compounds, threshold limit values published by the American Conference of Governmental Industrial Hygienists (ACGIH). For the ***reactive*** hazards, a brief comment is made on any explosive (or violent polymerisation) properties and aspects of the chemical reactivity of a substance which are of concern. These include the potential for peroxidation, oxidising/reducing properties and incompatibility with commonly available chemicals. ***Toxicity*** information has been chosen to show hazardous effects from short-term or long-term exposure. Observations from human exposure are summarised if available (including possible adverse effects of drugs), otherwise experimental (exp.) tests are quoted. Included in the toxicity data are the results of irritancy tests, acute lethality data, target organ toxicity, and carcinogenic and reproductive properties, where appropriate. Those chemicals which have been classified by the International Agency for Research on Cancer (IARC) as *human carcinogens*, *probable human carcinogens* or *possible human carcinogens* have been identified in DFC accordingly.

The Publishers cannot be held responsible for any inaccuracies in the reported information, neither does the omission of hazard data in the *Dictionary* imply an absence of this data from the literature. Widely recognised hazards are included, however, and where possible key toxicity reviews are identified in the references. Further advice on the storage, handling and disposal of chemicals is given in *The Organic Chemist's Desk Reference*.

Finally, it should be emphasised that any chemical has the potential for harm if it is carelessly used.

6.8.2 RTECS® Accession Numbers*

Many entries in DFC contain one or more RTECS® Accession Numbers. Possession of these numbers allows users to locate toxicity information on relevant substances from the NIOSH *Registry of Toxic Effects of Chemical Substances*, which is a compendium of toxicity data extracted from the scientific literature.

---

* RTECS® Accession Numbers are compiled and distributed by the National Institute for Occupational Safety and Health Service of the U.S. Department of Health and Human Services of The United States of America. All rights reserved (1996)

For each Accession Number, the RTECS® database provides the following data when available: substance prime name and synonyms; data when the substance record was last updated; CAS Registry Number; molecular weight and formula; reproductive, tumorigenic, and toxic dose data; and citations to aquatic toxicity ratings, IARC reviews, ACGIH Threshold Limit Values, toxicological reviews, existing Federal standards, the NIOSH criteria document program for recommended standards, the NIOSH current intelligence program, the NCI Carcinogenesis Testing Program, and the EPA Toxic Substance Control Act inventory. Each data line and citation is referenced to the source from which the information was extracted.

6.9 Bibliographic references

The selection of references is made with the aim of facilitating entry into the chemical and food literature for the user who wishes to locate more detailed information about a particular compound. In general and where possible, recent references are preferred to older ones.

In the printed DFC, the reference selection has been edited to include only those references that are most relevant to each entry. In particular, many references which refer to derivatives that are not of food significance have been omitted from the entry. All of these references can be seen on the CD-ROM version, which contains the complete entries as currently recorded on the Chapman & Hall Chemical Database.

References are given in date order except for references to spectroscopic library collections, which sort at the top of the list, and those to hazard/toxicity sources, which sort at the bottom.

The content of most references is indicated by means of a reference tag. An explanation of standard abbreviations used in reference tags is given in Section 7.2. If a reference tag is considered to be of particular importance, e.g., for an important synthesis or review, it will appear in **boldface** type.

6.9.1 Journal abbreviations

In general these are uniform with the *Chemical Abstracts Service Source Index* (CASSI) listing except for a short list of very common journals where we have been able to save a considerable amount of space by using well understood short-form abbreviations. A list of these follows:

DFC Abbreviation	CASSI Name
Acta Cryst. (and sections thereof)	Acta Crystallogr. (and sections thereof)
Annalen	Liebigs Ann. Chem.
Chem. Comm.	J. Chem. Soc., Chem. Commun.
J.A.C.S.	J. Am. Chem. Soc.
J.C.S. (and various subsections thereof)	J. Chem. Soc. (and various subsections thereof)
J. Het. Chem.	J. Heterocycl. Chem.
J.O.C.	J. Org. Chem.
Tet. Lett.	Tetrahedron Lett.

7. ABBREVIATIONS

7.1 General

The following is a selection of the most common database abbreviations used:

Abbreviation	Name
[α]	specific rotation
abs config	absolute configuration
Ac	acetyl
acc	according
AcOH	acetic acid
Ac_2O	acetic anhydride
ACGIH	American Conference of Governmental Industrial Hygienists
ADI	Acceptable Daily Intake
alk	alkaline
amorph	amorphous
amt	amount
anal	analytical applications, analysis of detection
anhyd	anhydrous
aq	aqueous
BAN	British Approved Name
bibl	bibliography
biosynth	biosynthesis
Bp	boiling point
bwd	bird (wild)
c	concentration
ca	(*circa*) about
cd	circular dichroism
CAS	Chemical Abstracts Service
chromatog	chromatography
cmr	carbon (^{13}C) nuclear magnetic resonance
CNS	central nervous system
col	colour, coloration
coml	commercial(ly)
compd	compound
conc	concentrated
config	configuration
conformn	conformation
constit	constituent
cryst struct	X-ray crystal structure determination
d	density
dck	duck
dec	decomposes, decomposition
degradn	degradation
deg	degree
deriv(s)	derivative(s)
detn	detection, determination
dil	dilute, dilution
dimorph	dimorphic
diss	dissolves, dissolved
dist(n)	distil, distillation
DMF	dimethylformamide
DMSO	dimethyl sulfoxide
ee	enantiomeric excess
epr	electron paramagnetic (spin) resonance

Abbreviation	Name
equilib	equilibrium
esp	especially
Et	ethyl
EtOAc	ethyl acetate
EtOH	ethanol
EtOH aq	aqueous ethanol
exp	experimental
FEMA	Flavor and Extract Manufacturers' Association
fl p	flash point
fluor	fluoresces, fluorescence
formn	formation
Fp	freezing point
g	gram
glc	gas liquid chromatography
Glc	β-D-glucopyranosyl
gpg	guinea pig
GRAS	Generally Recognised As Safe
ham	hamster
haz	hazard
hplc	high performance liquid chromatography
hydrol	hydrolyses, hydrolysed, hydrolysis
ihl	inhalation
ims	intramuscular
INN	International Nonproprietary Name
intermed	intermediate
ipr	intraperitoneal
ir	infra-red spectrum
isol(n)	isolation, isolated
isom	isomerism, isomers, isomerises
ivn	intravenous
JAN	Japanese Accepted Name
JMAF	Japanese Ministry for Agriculture, Forestry and Fisheries
LC	lethal concentration
LD	lethal dose: LD_{50}, a dose which is lethal to 50% of the animals tested
M	molecular weight (formula weight)
manuf	manufacturer, manufactured
max	maximum
Me	methyl
MeOH	methanol
Me_2CO	acetone
MEL	maximum exposure limit
metab	metabolite, metabolism
misc	miscible
mixt	mixture
mky	monkey
mod	moderately
Mp	melting point
ms	mass spectrum
mus	mouse
n	index of refraction, e.g. n_D^{20} for 20° and sodium light
nmr	nuclear magnetic resonance spectrum (general)
obt	obtained
oc	open cup
occup	occupational
OES	Occupational Exposure Standard
op	optical purity
ord	optical rotatory dispersion
orl	oral
Ph	phenyl (C_6H_5)
pharmacol	pharmacology
pmr	proton (^1H) nuclear magnetic resonance
polarog	polarography
polym	polymerises, polymer
ppd	precipitated
ppm	parts per million
props	properties
purifn	purification
Py	pyridine
rbt	rabbit
ref	reference
resoln	resolution
rev	review
rt	room temperature
scu	subcutaneous
sepn	separation
skn	skin
sl	slightly
sol	soluble
soln	solution
solv	solvent
sp	species (singular)
spar	sparingly
spp	species (plural)
ssp	subspecies
subl	sublimation, sublimes
synth	synthesis
tautom	tautomerism
THF	tetrahydrofuran
tlc	thin layer chromatography
TLV	Threshold Limit Value
tox	toxicity
unsatd	unsaturated
USAN	United States Adopted Name
uv	ultraviolet spectrum
v	very
var	variety
vis	visible
vol	volume

7.2 Reference Tags

The following is a selection of the most common Reference Tag abbreviations used:

Abbreviation	Name
abs config	absolute configuration
anal	analysis
bibl	bibliography
biodistribn	biodistribution

Abbreviation	Name
biosynth	biosynthesis
cd	circular dichroism
chromatog	chromatography
cmr	^{13}C nuclear magnetic resonance spectrum
config	configuration
conformn	conformation
cryst struct	X-ray crystal structure determination
deriv(s)	derivative(s)
detn	determination, detection
dsc	differential scanning calorimetry
dta	differential thermal analysis
ed	electron diffraction
electrochem	electrochemistry, cyclic voltammetry
em	electron microscopy
epr	electron paramagnetic (spin) resonance spectrum
esca	electron spectroscopy for chemical analysis
exafs	extended X-ray diffraction fine structure
fab-ms	fast atom bombardment mass spectroscopy
glc	gas-liquid chromatography
haz	hazard
hplc	high performance liquid chromatography
ir	infrared spectrum
isol	isolation
isom	isomerism
manuf	manufacture
metab	metabolism
mineral	mineralogy
ms	mass spectrum
nmr	nuclear magnetic resonance spectrum
occur	occurrence
ord	optical rotatory dispersion
pe	photoelectron spectroscopy
pharmacol	pharmacology
photol	photolysis

tox	toxicity
trans	transition(s)
use(s)	°
uv	ultraviolet spectrum
uv-vis	ultraviolet visible spectrum

8. THE CD-ROM VERSION OF DFC

Printed DFC is accompanied by a CD-ROM version. This electronic version has a number of advantages over the print version:

(a) It can be searched more flexibly, as detailed above.
(b) It contains the full version of entries that have been shortened (by the omission of less-relevant derivatives and references) in the printed work.

Once installed, a User manual and Help file providing additional information on data content and guide to searching are available from the Chapman & Hall/CRC folder in the Start Menu and from the Help menu on the CD-ROM.

When accessing the *Dictionary of Food Compounds on CD-ROM,* the first screen that is obtained is the Search Form window (Figure 2).

The Search Form window is split into three panes:

1. Structure Search pane – allowing structure and substructure searching.
2. Search Terms pane – search from one or more of the 29 available data/text fields.
3. Index pane – displays the indexed terms within a selected field.

From the Search Form window, design your search profile using text, structure or text/structure searching. Once your search has been performed, the resultant hits are listed alphabetically by chemical name in the Hit List screen. Clicking on any one of the hits in the hit list screen will result in that entry being displayed in the Entry Display screen (Figure 3).

Any comments and suggestions for inclusion may be sent to:

The Editors, DFC

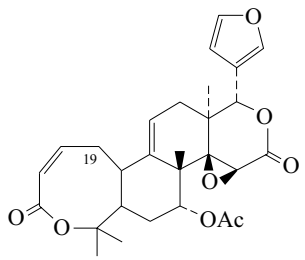
1(10→19)-Abeo-7-acetoxyisoobacun-3,10-olide A-1

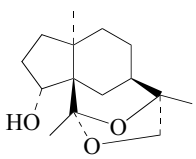


$C_{28}H_{34}O_9$ 514.571

(7α,10β)-*form* [85643-98-7]
Constit. of the fruits of a *Citrus-Poncirus* hybrid. Cryst. (MeOH). Mp 271-274°.

Bennett, R.D. *et al., Phytochemistry*, 1982, **21**, 2349

1(10→19)-Abeo-7-acetoxyobacun-9(11)-ene A-2

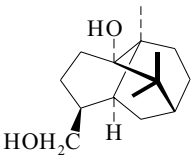


$C_{28}H_{32}O_8$ 496.556

7α-*form* [85643-97-6]
Constit. of the fruits of a *Citrus-Poncirus* hybrid.

Bennett, R.D. *et al., Phytochemistry*, 1982, **21**, 2349

3(4→5)-Abeo-4,11:4,12-diepoxy-3-eudesmanol A-3

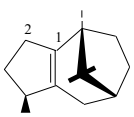


[210106-16-4]

$C_{15}H_{24}O_3$ 252.353
Constit. of *Cyperus rotundus* (nutgrass). Oil. $[\alpha]_D^{21}$ +15 (c, 0.04 in $CHCl_3$).

Ohira, S. *et al., Phytochemistry*, 1998, **47**, 1577-1581

5(1→10)-Abeo-1,12-patchoulanediol A-4

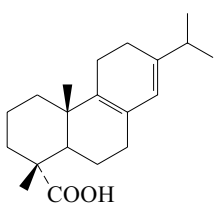


$C_{15}H_{26}O_2$ 238.369
Constit. of *Pogostemon cablin* (patchouli). Cryst. (hexane/C_6H_6). Mp 132.5-133°.

Trifilieff, E. *et al., Phytochemistry*, 1980, **19**, 2467 (*isol, struct*)
Niwa, H. *et al., Tet. Lett.*, 1984, **25**, 2797 (*synth*)

11(1→10)-Abeo-1(5)-patchoulene A-5

[514-51-2]
1,2,3,4,5,6,7,8-Octahydro-1,4,9,9-tetramethyl-4,7-methanoazulene, 9CI. ***β-Patchoulene***



$C_{15}H_{24}$ 204.355
Constit. of guaiac wood oil (*Bulnesia sarmienti*). Oil. $Bp_{0.6}$ 66.8°. $[\alpha]_D^{30}$ -42.6 (c, 10.5 in $CHCl_3$). n_D^{25} 1.4978.

$\Delta^{1,2}$-Isomer: [53823-16-8] *11(1→10)-Abeo-1-patchoulene.* ***δ-Patchoulene***
$C_{15}H_{24}$ 204.355
Constit. of *Pogostemon cablin* (patchouli). Oil. $[\alpha]_D^{25}$ -61.7 (EtOH).

Büchi, G. *et al., J.A.C.S.*, 1961, **83**, 927 (*isol, struct*)
Bates, R.B. *et al., J.A.C.S.*, 1962, **84**, 1307 (*synth*)

Abscisic acid A-11

[7773-56-0]

[2228-72-0, 52392-36-6]
5-(1-Hydroxy-2,6,6-trimethyl-4-oxo-2-cyclohexen-1-yl)-3-methyl-2,4-pentadienoic acid, 9CI. Abscisin II. Dormin

(*S*)-*form*

$C_{15}H_{20}O_4$ 264.321
Terpenoid (cyclofarnesane) numbering shown. Other schemes freq. encountered. Used to regulate ripening of fruit. λ_{max} 252 (ϵ 25200) (no solvent reported) (Derep). λ_{max} 244 (ϵ 25000) (EtOH/NaOH) (Derep). λ_{max} 245 (sh) (ϵ); 260 (ϵ 21300) (EtOH) (Derep).
►RZ2475100

(*S*)-*form* [21293-29-8]

[72029-68-6, 72029-69-7]
Constit. of cabbage, potato, lemon etc.. Cryst. ($CHCl_3$/petrol). Mp 160-161°. $[\alpha]_D$ +430. The incorrect abs. config. was formerly assigned.

β-D-Glucopyranosyl ester: [21414-42-6] ***Abscisyl β-D-glucopyranoside***
$C_{21}H_{30}O_9$ 426.463
Mp 114°. $[\alpha]_D^{17}$ +180 (c, 0.35 in EtOH).

11-Aldehyde: [41944-86-9] ***Abscisic aldehyde***
$C_{15}H_{20}O_3$ 248.321
Cryst. (CH_2Cl_2/hexane). Mp 127-128°. $[\alpha]_D^{20}$ +450.5 (c,1 in EtOH).

3α-Alcohol: [84026-26-6] ***4′-Dihydroabscisic acid***
$C_{15}H_{22}O_4$ 266.336
Isol. from immature seeds of broad bean (*Vicia faba*).

3β-Alcohol: [85718-96-3]
$C_{15}H_{22}O_4$ 266.336
λ_{max} 265 (EtOH) (Berdy).

13-Hydroxy: [25841-53-6] *13-Hydroxyabscisic acid*
$C_{15}H_{20}O_5$ 280.32
Constit. of cowpea (*Vigna unguiculata*) fruits.

13-Hydroxy, 13-O-(3-hydroxy-3-methylglutaroyl): [69790-31-4]

[69790-32-5] ***9′-(3-Hydroxy-3-methylglutaroyloxy)abscisic acid***. *β-Hydroxy-β-methylglutarylhydroxyabscisic acid. HMG-HOABA*
$C_{21}H_{28}O_9$ 424.447
Gum. $[\alpha]_D^{20}$ +560 (c, 0.013 in EtOH).

13-Hydroxy, 13-O-(3-hydroxy-3-methylglutaroyl), 5′-Me ester: [111672-32-3] ***MeHMG-HOABA***
$C_{22}H_{30}O_9$ 438.474
$[\alpha]_D^{15}$ +243 (c, 0.15 in MeOH).

13-Hydroxy, 3-alcohol:Pisumic acid
$C_{15}H_{22}O_5$ 282.336
Isol. from peas (*Pisum sativum*) irrigated with (±)-abscisic acid. Tentative struct..

14-Hydroxy: [91897-25-5] ***Nigellic acid***
$C_{15}H_{20}O_5$ 280.32
Isol. from leaves of *Vicia faba*. Mp 185-187°.

(±)-*form* [14375-45-2]
Mp 188-190°.

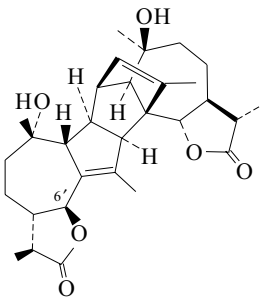
Abscisic alcohol A-12

[113472-20-1]

$C_{15}H_{22}O_3$ 250.337
Constit. of quince (*Cydonia oblonga*) fruit.



11-O-β-D-Glucopyranoside: [145153-00-0]
$C_{21}H_{32}O_8$ 412.479
Constit. of quince (*Cydonia oblonga*) fruit.

9,10-Dihydro: ***9,10-Dihydroabscisic alcohol***. *2,3-Dihydroabscisic alcohol*
$C_{15}H_{24}O_3$ 252.353
Constit. of starfruit *Averrhoa carambola*. $[\alpha]_D$ +49.7 (c, 0.0018 in EtOH).

Lutz, A. *et al., J. Agric. Food Chem.*, 1992, **40**, 116 (*isol, pmr, cmr*)
Lutz, A. *et al., Phytochemistry*, 1993, **32**, 57; 1994, **36**, 811 (*isol, pmr, cmr, cd*)

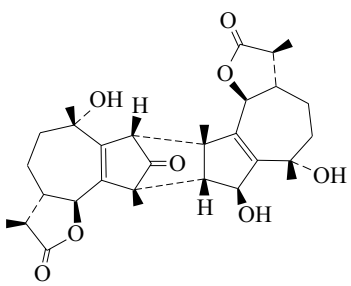
Absinthin A-13

[1362-42-1]

$C_{30}H_{40}O_6$ 496.642
Constit. of *Artemisia absinthium* (wormwood). Orange-yellow needles. Mp 182-183° dec. $[\alpha]_D$ +180.

6′-Epimer: [11029-90-6] ***Isoabsinthin***
$C_{30}H_{40}O_6$ 496.642
Constit. of *Artemisia absinthium* (wormwood). Cryst. (MeOH). Mp 172-174°.

11-Epimer: ***11-Epiabsinthin***
$C_{30}H_{40}O_6$ 496.642
Oil. $[\alpha]_D^{24}$ +159 (c, 0.34 in $CHCl_3$).



10′,11′-Diepimer: ***10′,11′-Epiabsinthin***
$C_{30}H_{40}O_6$ 496.642
Oil. $[\alpha]_D^{24}$ +107 (c, 0.62 in $CHCl_3$).

10′,11,11′-Triepimer: ***10′,11,11′-Epiabsinthin***
$C_{30}H_{40}O_6$ 496.642
Oil. $[\alpha]_D^{24}$ +46 (c, 0.35 in $CHCl_3$).

Aconitic acid A-108

[499-12-7]
1-Propene-1,2,3-tricarboxylic acid, 9CI. Achilleaic acid. Citridinic acid. Equisetic acid. Pyrocitric acid. 3-Carboxy-2-pentenedioic acid. FEMA 2010

(*E*)-*form*

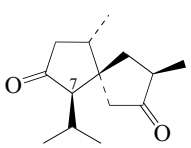
$C_6H_6O_6$ 174.11
▶ UD2380000

Mixed Et esters:Ethyl aconitate. FEMA 2417
$C_8H_{10}O_6$ 202.163
Flavouring ingredient. Prepd. as mixt. of mono-, di- and triesters by acid-catalysed esterification of aconitic acid with EtOH or by heating, Tri-Et ester. Oily liq. with sweet, fruity odour and flavour. Mp 260°.

(E)-form [4023-65-8]
Isol. from *Asarum europaeum*, from cane-sugar molasses, roasted chicory root, roasted malt barley, passion fruit, sorghum root and sugar beet. Flavouring agent used in fruit flavours and alcoholic beverages. Leaflets (H_2O). Sol. H_2O, EtOH. Mp 194-195° dec. pK_{a2} 4.46 (25°). Decarboxylates at Mp to Methylenebutanedioic acid, M-403. Mp variable with rate of heating.

Tri-Et ester: [68077-28-1]

[5349-99-5]
$C_{12}H_{18}O_6$ 258.271
Bp_{18} 172°.



(Z)-form [585-84-2]
Present in apple fruits, maple syrup and passion fruit juice. Mp 125°. Gives (*E*)-form on heating.

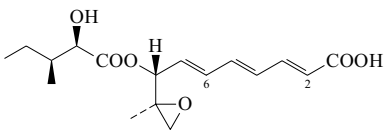
Originally assigned the formula $C_{18}H_{18}O_4$.

(+)-form [15298-36-9]
Cryst. (EtOH). Mp 196-197°. $[\alpha]_D^{22}$ +36 (c, 0.4 in $CHCl_3$). $[\alpha]_D^{21}$ -48.1 (c, 0.5 in EtOH).

(-)-form [15298-37-0]
Cryst. (EtOH). Mp 196-197°. $[\alpha]_D$ -35.1 ($CHCl_3$). $[\alpha]_D$ +47.5 (c, 0.5 in EtOH).

(±)-form [37791-13-2]
Alkaloid from the leaves of *Aegle marmelos* (bael). Cryst. (EtOH/EtOAc). Mp 176° (173-175°).

Ac:
Plates (EtOAc). Mp 124°.



Dihydro:
Plates (EtOH/EtOAc). Mp 140°.

Me ether: [70546-93-9] N-*[2-Methoxy-2-(4-methoxyphenyl)ethyl]cinnamide.* Aegle marmelos *Alkaloid D*
$C_{19}H_{21}NO_3$ 311.38
Isol. from *Aegle marmelos* (bael). Cryst. (C_6H_6/hexane). Mp 135°. Artifact.

Et ether: [70546-94-0] N-*[2-Ethoxy-2-(4-methoxyphenyl)ethyl]cinnamide.* Aegle marmelos *Alkaloid B*
$C_{20}H_{23}NO_3$ 325.407
Isol. from *Aegle marmelos* (bael). Cryst. (C_6H_6/hexane). Mp 99-100°. Artifact.

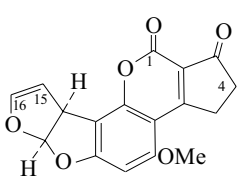
AF Toxin II A-133

(2*E*,4*E*,6*E*)-*form*

$C_{17}H_{24}O_6$ 324.373
Prod. by *Alternaria alternata* on strawberry. Phytotoxin specific to strawberry and pear. Not related to AF Toxin.

(2E,4E,6E)-form [104420-17-9]
AF Toxin IIc
Oil (as Et ester). $[\alpha]_D^{23}$ -4.4 (c, 0.9 in EtOH) (Et ester). λ_{max} 289 (ε 27000) (MeOH) (Derep).



(2E,4E,6Z)-form [104363-99-7]
AF Toxin IIa
Oil (as Et ester). $[\alpha]_D^{23}$ +153 (c, 0.78 in EtOH) (Et ester). Major component of AF toxin complex λ_{max} 289 (ε 27000) (MeOH) (Derep).

(2E,4Z,6E)-form
AF Toxin IIb
λ_{max} 289 (ε 27000) (MeOH) (Derep).

Aflatoxin B_1 A-134

*2,3,6*a,*9*a-*Tetrahydro-4-methoxycyclopenta[*c*]furo[3,2′:4,5]furo[2,3-*h*][1]benzopyran-1,11-dione, 9CI. Aflatoxin FB_1. Aflatoxin B*

(−)-*form*

$C_{17}H_{12}O_6$ 312.278
Sol. MeOH, $CHCl_3$; poorly sol. hexane. λ_{max} 220 (ε 25600); 265 (ε 13400); 362 (ε 21800) (MeOH) (Berdy). λ_{max} 223 (ε

25100); 265 (ϵ 13400); 362 (ϵ 21800) (EtOH) (Berdy).

▶ LD_{50} (mus, orl) 1 mg/kg. GY1925000

(-)-*form* [1162-65-8]
Prod. by *Aspergillus flavus* and *Aspergillus parasiticus*. Toxin causing Turkey X disease. One of the most potent carcinogens known in animals. Potential food contaminant esp. in grains and nuts. Cryst. exhibiting blue fluor. Mp 268-269° dec. $[\alpha]_D^{25}$ -562 (c, 0.115 in $CHCl_3$).

▶ Human and exp. carcinogen; LD_{50} (rat, orl) 5 mg/kg. Exp. reprod. and teratogenic effects. Hepatotoxic. Crystalline material, e.g. from preparative tlc plates, presents an inhalation hazard because the crystals develop electrostatic charge and cling to dust particles.

O-*De-Me:* [32215-02-4] ***Aflatoxin P_1***
$C_{16}H_{10}O_6$ 298.251
Metab. of Aflatoxin B_1. Pale yellow needles (MeOH/C_6H_6/hexane). Mp 320°. $[\alpha]_D^{20}$ -574 (c, 0.08 in MeOH).

▶ GY1775000

15α,16α-Epoxide: [67337-06-8]
$C_{17}H_{12}O_7$ 328.278
Prob. ultimate carcinogen of Aflatoxin B_1. Cryst. (Me_2CO/CH_2Cl_2). Mp 300° (phase transition at 230°). Stable at -10°, fairly stable at r.t..

▶ Presumed highly toxic and carcinogenic.

15,16-Dihydro: [7220-81-7] ***Aflatoxin B_2***
$C_{17}H_{14}O_6$ 314.294
Metab. of *Aspergillus flavus*. Yellow cryst. with blue fluor. (MeOH). Sol. MeOH, $CHCl_3$; poorly sol. hexane. Mp 310° dec. $[\alpha]_D^{23}$ -492 (c, 0.1 in $CHCl_3$). λ_{max} 222 (ϵ 19600); 265 (ϵ 9200); 363 (ϵ 14700) (MeOH) (Berdy). λ_{max} 220 (ϵ 20800); 265 (ϵ 12700); 363 (ϵ 24000) (EtOH) (Berdy).

▶ Human and exp. carcinogen. LD_{50} (dck, orl) 1.7 mg/kg. Hepatotoxic. GY1722000

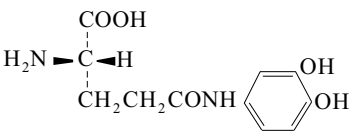
Agar A-139

[9002-18-0]
Agar-agar. Gum agar. Gelose. Japan agar. Bengal isinglass. Ceylon isinglass. Chinese isinglass. Japan isinglass. FEMA 2012. E406



See also Agarose, A-142. Consists of a mixt. of 2 polysaccharides, Agarose A-142 and Agaropectin, which has essentially the same struct. except that a variable proportion of the sugars in the polymer are replaced by 4,6-*O*-(1-carboxyethylidene)galactose or by sulfated or methylated sugar residues such as to retain the alternating sequence of 3-linked β-D- and 4-linked α-L- units. An important thickener, stabiliser and gelling agent in the food industry. Strips or fine powder. Sl. sol. in hot H_2O.

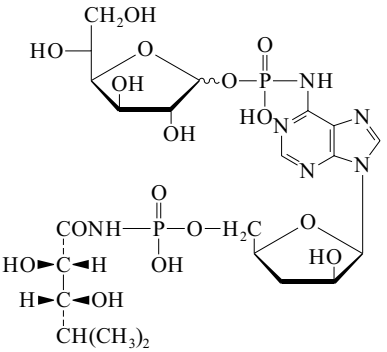
Agarose A-142

[9012-36-6]

[9036-61-7]
Neutral agarose. Indubiose A4

See also Agar, A-139. Composed of repeating units of β-D-Galp (1→4) 3,6-anhydro-α-L-Galp(1→3). Has a domain struct. of double helixes aggregating into a three-dimensional framework holding water molecules.There are two other polysaccharides in agar, one is similar to agarose but with 4,6-acetals of pyruvic acid at some of the D-galactose units. The other contains fewer 3,6-anhydro-L-galactose units and is sulfated.

Poly(6-aminohexyl) ether: [58856-73-8] *Agarose (6-aminohexyl)carbamimidate. Sepharose AH*Non-stoichiometric.



Poly(5-carboxypentyl) ether: [55128-01-3] Non-stoichiometric.

Gum levan. Levan gum. Kelacid. Norgine. Sazio. E400

R^1 = H, R^2 = COOH
or R^1 = COOH, R^2 = H

$[C_6H_8O_6]$

A polymer consisting of various proportions of β-D-Mannuronic acid and α-L-Guluronic acid linked 1→4 and arranged in a block fashion. Polymeric. Minimum formula given. Alginates are used to improve food texture, e.g. in ice cream, pie fillings. Emulsifier, stabiliser,

thickener. $[\alpha]_D$ -120 (as Na salt in H_2O). Approx. 200 grades of the acid and its salts (ammonium, Ca, K, Na) comly. available. Alginates with the highest guluronic acid content display the strongest gel-forming activity.

▶ AZ5775000

Na salt: [9005-38-3] *Sodium alginate. Algin. E401*
Stabiliser, emulsifier, thickener, formulation aid. Pale yellow-brown powder. Sol. H_2O; poorly sol. EtOH, hexane. λ_{max} 260 (H_2O) (Berdy).

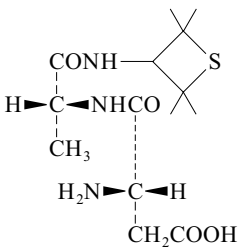
▶ AZ5820000

K salt: [9005-36-1] *Potassium alginate. E402*
Stabiliser, emulsifier, thickener, formulation aid. Insol. EtOH, Et_2O.

Ca salt: [9005-35-0] *Calcium alginate. E404*
Stabiliser, emulsifier, thickener, formulation aid. Sl. sol. EtOH; insol. H_2O, Et_2O.

NH_4 salt: [9005-34-9] *Ammonium alginate. E403*
Stabiliser, emulsifier, thickener, formulation aid. Insol. EtOH, Et_2O.

2-Hydroxypropyl ester:



[39306-87-1, 51374-11-9, 52441-26-6, 57762-73-9, 59125-52-9, 95328-14-6] *Propylene glycol alginate. Colloid 602. Dricoid. Kelcoloid. FEMA 2941. E405. Many other trade names*
Stabiliser, emulsifier, thickener, formulation aid, surface active agent and flavouring adjunct or adjuvant for foodstuffs. White to yellowish fibrous or granular powder. Sol. H_2O. Composition varies acc. to the degree of esterification.

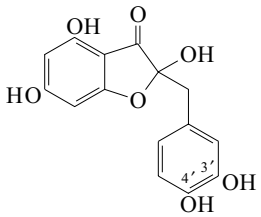
7-Hydroxy, 8-Me ether: ***7-Hydroxy-8-O-methylaloin A***
$C_{22}H_{24}O_{10}$ 448.426
Constit. of *Aloe vera* leaf. Yellowish needles (Me_2CO/C_6H_6). Mp 218-224°. $[\alpha]_D^{30}$ +27.2 (c, 0.25 in MeOH). λ_{max} 206 (log ε 4.48); 221 (log ε 4.45); 294 (log ε 4.2); 345 (log ε 3.93) (MeOH).

*1″-Deoxy, 8-*O*-β-D-glucopyranoside:* [53823-09-9] ***Cascaroside C***
$C_{27}H_{32}O_{13}$ 564.542
From cascara sagrada *Rhamnus purshiana* bark. Cascarosides C and D are a pair of epimers resembling Cascarosides A and B.

*1″-Deoxy, 6-hydroxy, 8-*O*-β-D-glucopyranoside:* [164178-32-9] ***Cascaroside E***
$C_{27}H_{32}O_{14}$ 580.541
Constit. of cascara sagrada *Rhamnus purshiana* bark. Mp 197-199°. $[\alpha]_D^{25}$ -95.4 (c, 0.1 in MeOH).

(10ξ)-*form*



1′-Deoxy: [18262-45-8] ***Chrysaloin***. *11-Deoxyaloin*
$C_{21}H_{22}O_8$ 402.4
Isol. from *Rumex vesicarius* (bladder dock). Yellow powder (EtOAc). Mp 224-225° dec. $[\alpha]_D^{27}$ -9 (c, 1 in EtOH).

[5133-19-7, 73889-54-0, 138373-24-7]

Aluminium calcium silicate A-195

[12251-31-9]
Calcium aluminosilicate. E554

$CaAl_2(SiO_3)_4$

$Al_2CaO_{12}Si_4$ 398.376
Anticaking agent.

Mineral-*form* [1318-80-5]

[11126-82-2, 12026-15-2, 12251-34-2, 12330-25-5, 138329-32-5]
Laumontite

Zeolite-group mineral corresp. to $Al_2Ca(SiO_3)_4.4H_2O$ or $Al_2CaH_8(SiO_4)_4$.A partially dehydrated variety leonhardite also occurs naturally.

Mineral-*form* [12042-71-6]

[82828-52-2]
Wairakite

Zeolite-group mineral corresp. to $Al_2Ca(SiO_3)_4.2H_2O$; Ca analogue of Analcime.

Bartl, H. *et al., Neues Jahrb. Mineral., Monatsh.*, 1967, 33-42; 1970, 298-310 (*cryst struct, laumontite*)

Aluminium hydroxide, JAN, USAN A-196

[21645-51-2]

[12252-70-9]

$Al(OH)_3$

AlH_3O_3 78.003
Used in foods as a buffer, neutralising agent or firming agent. White solid (H_2O). Prac. insol. H_2O; sol. conc. aq. acids and alkalis. Forms gel on prolonged contact with H_2O.

► Gastrointestinal disturbances by ingestion.
BD0940000

Gel-*form* [1330-44-5]
Algeldrate. Aluminium hydroxide hydrate. W 4600

Mineral-*form* [14762-49-3]
Gibbsite. Hydragillite
Double layer of close packed OH of held by H bonds with Al in ⅔ octahedral holes.Colourless hexagonal platelets.

Mineral-*form* [20257-20-9]
Bayerite
Layer struct. with O approx. hcp and Al octahedrally coord..White powder, colourless monoclinic cryst.

Mineral-*form* [13840-05-6]
Nordstrandite
Double layers of AlO_6 octahedra with shared edges and corners linked by H bonds.Colourless, beige, pink and pale green cryst.

Mineral-*form*
Doyleite
Creamy or bluish white triclinic cryst.

Aluminium potassium sulfate ($AlK(SO_4)_2$) A-198

[10043-67-1]

[15007-61-1]
Sulfuric acid, aluminium potassium salt (2:1:1), 8CI. Aluminium potassium sulfate. Anhydrous alum. E522

$KAl(SO_4)_2$

$AlKO_8S_2$ 258.207

Struct. comprises alternate layers of six coordinate $Al^{3\oplus}$ and $K^{\oplus}$ with $SO_4^{2\ominus}$ between.Colourless hexagonal plates (H_2SO_4). Sol. H_2O (7.74 g per 100 cm^3 at 30°); insol. EtOH. Corresp. $NH_4^{\oplus}$, $Rb^{\oplus}$, $Cs^{\oplus}$ salts also descr. ΔH_f° -2470 kJ mol^{-1}; ΔG_f° -2240 kJ mol^{-1}; S° 205 J K^{-1} mol^{-1}.

▶ WS5650000

Dodecahydrate: [7784-24-9] *Potassium alum.* ***Kalinite.*** *Hexaaquaaluminium(3+) hexaaquapotassium(1+) bis(sulfate). α-Alum*

$AlH_{24}KO_{20}S_2$ 474.389

Used as an additive in the bleaching of milk and flour by benzoyl peroxide. Colourless cryst. (H_2O). Sol. H_2O (11 g per 100 cm^3 at 20°); insol. EtOH, Me_2CO. Mp 105°. Dec. on heating (-$9H_2O$ at 64.5°, -$12H_2O$ at 200°).

Aluminium sulfate, USAN A-202

[10043-01-3]

[10124-29-5, 10199-21-0, 16828-11-8, 17927-65-0]

Alunogenite. E520

$Al_2(SO_4)_3$

$Al_2O_{12}S_3$ 342.154

Used in foods as a firming agent. White solid. Forms complex series of hydrates. Dec. at 450° to amorphous Al_2O_3 with high surface area. ΔH_{f298}° -3435 kJ mol^{-1}. $Al(HSO_4)_3$ also known.

▶ BD1700000

Heptadecahydrate: ***Alunogen***
Colourless cryst.

Octadecahydrate: [7784-31-8]
Colourless hygroscopic cryst. (H_2O). Exact amount of H_2O uncertain. Gives anhydrous salt during 24h at 380°.

▶ WS5697000

Anthranilic acid, 8CI. Vitamin L_1

$C_7H_7NO_2$ 137.138
Leaflets. Sol. hot H_2O, EtOH, Et_2O. Mp 144-148°. pK_{a1} 1.97; pK_{a2} 4.79 (25°). pK_{a1} 2.17; pK_{a2} 4.85 (25°, 0.1*M* KCl). Sublimes, triboluminescent λ_{max} 218 (ε 20200); 248 (ε 7000); 335 (ε 4700) (MeOH) (Berdy).

▶ LD_{50} (mus, orl) 1400 mg/kg. Exp. reprod. effects. CB2450000

β-D-Glucopyranosyl ester:β-D-Glucopyranosyl anthranilate
$C_{13}H_{17}NO_7$ 299.28
Constit. of the fruit of piñuela *Bromelia plumieri*.

Me ester: [134-20-3] *Methyl 2-aminobenzoate. FEMA 2682*
$C_8H_9NO_2$ 151.165
Found in essential oils, including bergamot, orange peel, lemon peel, jasmine, ylang-ylang and neroli. Also present in concord grape, strawberry, star fruit, wines, cocoa, black tea and rice bran. Flavouring agent. Cryst. Mp 24-25°. Bp_{15} 133.5°. pK_a 2.32 (25°, 1% EtOH aq.). Steam-volatile.

▶ Skin irritant. LD_{50} (rat, orl) 2910 mg/kg. Exp. reprod. effects. CB3325000

Et ester: [87-25-2] *Ethyl 2-aminobenzoate. FEMA 2421*
$C_9H_{11}NO_2$ 165.191
Flavouring ingredient. Present in orange juice, orange peel and concord grape. Liq. with faint orange-flower odour and flavour. d_4^{20} 1.12. Mp 13°. Bp 266-268° Bp_{15} 145-147°.

▶ DG2448000

2-Methylpropyl ester: [7779-77-3] *2-Methylpropyl 2-aminobenzoate. Isobutyl anthranilate. FEMA 2182*
$C_{11}H_{15}NO_2$ 193.245
Used in food flavouring. Liq. d 1.06. Bp 270° $Bp_{13.5}$ 169-170°.

2-Propenyl ester: [7493-63-2] *2-Propenyl 2-aminobenzoate. Allyl anthranilate. FEMA 2020*
$C_{10}H_{11}NO_2$ 177.202
Flavour ingredient. Bp_2 105°.

Butyl ester: [7756-96-9] *Butyl 2-aminobenzoate. FEMA 2181*
$C_{11}H_{15}NO_2$ 193.245
Used in fruit food flavouring. d 1.07. Bp 182°.

(Z)-3-Hexenyl ester: [65405-76-7] cis-*3-Hexenyl 2-aminobenzoate. FEMA 3925*
$C_{13}H_{17}NO_2$ 219.283
Flavouring ingredient for baked goods and candies. Bp_5 160°.

Cyclohexyl ester: [7779-16-0] *Cyclohexyl 2-aminobenzoate. Cyclohexyl anthranilate. FEMA 2350*
$C_{13}H_{17}NO_2$ 219.283
Flavouring ingredient. Liq. with a sweet, fruity taste. $d^{15.5}$ 1.02. Bp 318°.

2-Phenylethyl ester: [133-18-6] *2-Phenylethyl 2-aminobenzoate. Phenethyl anthranilate. FEMA 2859*
$C_{15}H_{15}NO_2$ 241.289
Flavouring ingredient. Cryst. Mp 42°. Bp 324°.

2-Naphthyl ester: [63449-68-3] *2-Naphthalenol 2-aminobenzoate. β-Naphthyl anthranilate. FEMA 2767*
$C_{17}H_{13}NO_2$ 263.295
Flavouring ingredient for beverages, baked goods and candies. Mp 118°. Bp 340°.

Amide: [88-68-6] *2-Aminobenzamide. Anthranilamide*
$C_7H_8N_2O$ 136.153
Acetaldehyde scavenger for polyethylene beverage bottles. Leaflets. Mp 109-111.5° dec.

▶ CU8993000

N-*(Carboxyacetyl):* [53947-84-5] *2-[(Carboxyacetyl)amino]benzoic acid, 9CI. 2-(Malonylamino)benzoic acid*
$C_{10}H_9NO_5$ 223.185
Isol. from the leaves of the peanut (*Arachis hypogaea*). Cryst. (Me_2CO/hexane). Mp 190-192°.

N-*Me, 2-methylpropyl ester:* [65505-24-0] *Isobutyl* N-*methylanthranilate*
$C_{12}H_{17}NO_2$ 207.272
Possible flavour ingredient; reported in food additive surveys.

N-*Et, Et ester:* [38446-21-8] *Ethyl* N-*ethylanthranilate*
$C_{11}H_{15}NO_2$ 193.245
Possibly used as a flavouring agent; listed in the FDA inventory of substances added to food.

3-Hydroxytyrosine, 9CI. 3,4-Dihydroxyphenylalanine. DOPA

(*S*)-*form*

$C_9H_{11}NO_4$ 197.19Log P -2.82 (uncertain value) (calc).

(*S*)-*form* [59-92-7]

L-*form*. ***Levodopa, BAN, INN, JAN, USAN***. *Bendopa. Brocadopa. Dopar. Larodopa. Levopa. Veldopa. Many other names*

Occurs in seedlings and pods of *Vicia faba*. Prisms, needles (H_2O + SO_2) or plates (EtOH aq.). Mp 285.5° dec. $[\alpha]_D^{20}$ -12.15 (c, 4 in 1*N* HCl). Pharmacol. active isomer. Rapidly turns green in air, aq. solns. darken in air. Green col. with $FeCl_3$. Reduces $AgNO_3$, NH_3 and acid $KMnO_4$. Component of Sinemet. High-mol.-wt. polymers have been synth..

▶ Systemic (e.g. CNS) and adverse effects when used therapeutically. LD_{50} (rat, orl) 1780 mg/kg. Exp. reprod. and teratogenic effects. AY5600000

3′-O-β-D-Glucopyranoside: [2275-95-8]

$C_{15}H_{21}NO_9$ 359.332

Isol. from *Pisum sativum* (peas) and *Vicia faba*. Resin or syrup.

($(NH_4)(H_2PO_4)$)

[7722-76-1]

[10124-31-9]

Monoammonium phosphate, 9CI, 8CI. Ammonium phosphate†. Ammonium dihydrogenphosphate

$(NH_4)(H_2PO_4)$

H_6NO_4P 115.025

Thermally the most stable of the ammonium orthophosphates. Each NH_4 cation is coordinated by 8 oxygens forming two interpenetrating tetragonal disphenoids. Mean P–O 153.7 pm. Used in food as a source of acidity, pH control agent, buffering agent, leavening agent, dough strengthener and nutrient source; also used as a yeast nutrient in wine production and to start secondary fermentations in the production of sparkling wines. Colourless, transparent tetragonal prisms (H_2O). Mp 190°. Low temp. orthorhombic, antiferroelectric phase transforms at -125° (rising temp.) into tetragonal, paraelectric phase.

α-Amylase A-323

[9000-90-2]

Alpha Amylase, USAN. Fortizyme. Amylopsin. Buclamase. Maxilase. Amylase THC250. Glycogenase. 1,4-K-D-Glucan glucanohydrolase. E.C. 3.2.1.1

Enzyme which hydrolyses 1,4-α-glycosidic linkages in starch, glycogen and related polysaccharides; starch is converted into maltose and dextrins. Used for the hydrolysis of starch in the sugar, brewing and distilling industries. Improves baking quality and fermentation. A concentrate of amylolytic enzymes of bacterial or animal origin.

β-Amylase, 9CI A-324

[9000-91-3]

1,4-D-Glucan maltohydrolase. Saccharogen amylase. Glycogenase. E.C. 3.2.1.2

Tetrameric enzyme, MW 206 000 ± 1000; tryptophan residues are involved at the active site. Used in the prodn. of alcoholic beverages and sugar syrups. Releases successive maltose units from the non-reducing end of a polysaccharide chain by hydrolysis of α-(1→4)-glucan linkages; acts on starch, glycogen and related polysaccharides.

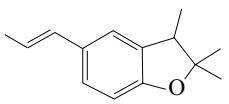
Relative Configuration

$C_{38}H_{22}O_6$ 574.588

Phenalene dimer showing 2-fold rotational symmetry. Compd. 2 of Luis *et al*, 1997, has been reassigned this struct. (2002). Constit. of *Musa acuminata* (dwarf banana). Yellow solid. λ_{max} 249 (log ϵ 3.9); 284 (log ϵ 3.4); 358 (log ϵ 1.5); 448 (log ϵ 1.5) (MeOH).

4′-Hydroxy: ***4′-Hydroxyanigorootin***
$C_{38}H_{22}O_7$ 590.588
Constit. of the rhizomes of *Musa acuminata* (dwarf banana). Pale yellow solid. Contains a *p*-hydroxyphenyl residue. Formerly assigned an isomeric struct..



4′,4″-Dihydroxy: ***4′,4″-Dihydroxyanigorootin***
$C_{38}H_{22}O_8$ 606.587
Constit. of the rhizomes of *Musa acuminata* (dwarf banana). Pale yellow solid. Compd. 3 of Luis *et al*, 1997, was reassigned this struct. (2002).

Luis, J.G. *et al., Tetrahedron*, 1997, **53**, 8249-8256 (*isol*)
Hoelscher, D. *et al., Phytochemistry*, 1999, **50**, 155-161 (*isol, uv, ir, pmr, cmr*)

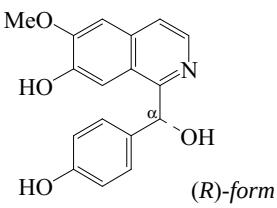
Anisoxide A-338

[643-49-2]

2,3-Dihydro-2,2,3-trimethyl-5-(1-propenyl)benzofuran, 9CI

$C_{14}H_{18}O$ 202.296



(±)-form

Isol. from oil of star anise (*Illicium verum*) after thermal fractionation. Mp 34-37°. Bp_{14} 142-143°. An artifact resulting from rearr. of Foeniculin (see 4-(1-Propenyl)phenol, P-512).

Jackson, R.W. *et al., J.C.S.*, 1937, 513 (*isol*)
Barton, D.H.R. *et al., J.C.S.*, 1958, 4393 (*synth*)
Okely, H.M. *et al., J.C.S. Perkin 1*, 1981, 897

Annocherine A A-339

Annocherine C

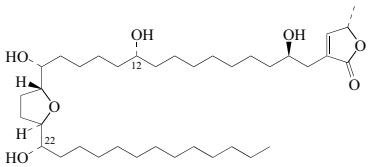
(*R*)-*form*

$C_{17}H_{15}NO_4$ 297.31

Annocherine A was the *S*-enantiomer and Annocherine C the *R*-form.

(R)-form [431982-10-4]

Alkaloid from the leaves of *Annona cherimola* (cherimoya). Yellow amorph. powder. Mp 123-125°. $[\alpha]_D^{25}$ -125 (c, 0.3 in $CHCl_3$). λ_{max} 260 ; 300 ; 331 (MeOH).



(S)-form

Alkaloid from *Annona cherimola* (cherimoya). Yellow needles. Mp 156-158°. $[\alpha]_D^{24}$ +135 (c, 0.1 in $CHCl_3$). λ_{max} 260 (log ϵ 3.41); 300 (log ϵ 3.1); 330 (log ϵ 3.52) (MeOH).

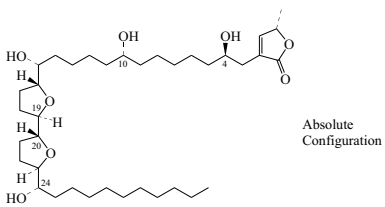
α-Me ether: ***Annocherine B***
$C_{18}H_{17}NO_4$ 311.337
Alkaloid from *Annona cherimola* (cherimoya). Amorph. yellow powder. Mp 196-198°. $[\alpha]_D^{24}$ +115 (c, 0.1 in $CHCl_3$). λ_{max} 260 (log ϵ 3.32); 300 (log ϵ 3.11); 331 (log ϵ 3.6) (MeOH).

Chen, C.-Y. *et al., J. Chin. Chem. Soc. (Taipei)*, 2001, **48**, 1203-1206 (*Annocherine C*)
Chen, C.-Y. *et al., Phytochemistry*, 2001, **56**, 753-757 (*Annocherine A,B*)

Annoglacin A A-340

Absolute Configuration

$C_{37}H_{68}O_7$ 624.94



Constit. of the leaves of *Annona glabra* (pond apple). Waxy solid. $[\alpha]_D^{25}$ +15 ($CHCl_3$). λ_{max} 219 (log ϵ 3.62) (MeOH).

22-Epimer: ***Annoglacin B***
$C_{37}H_{68}O_7$ 624.94
Constit. of *Annona glabra* (pond apple). Waxy solid. $[\alpha]_D^{25}$ +15.7 ($CHCl_3$). λ_{max} 218 (log ϵ 3.48) (MeOH).

Liu, X.-X. *et al., Phytochemistry*, 1999, **50**, 815-821 (*isol, uv, ir, pmr, cmr, ms*)

Annoglaucin A-341

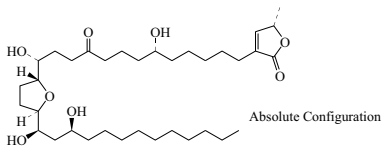
[164991-79-1]

Absolute Configuration

$C_{37}H_{66}O_8$ 638.924

Constit. of the seeds of *Annona purpurea* (soncoya). Waxy solid. Mp 58-59°. $[\alpha]_D^{20}$ +15.4 (c, 0.6 in $CHCl_3$). $[\alpha]_D$ +31 (c, 1 in MeOH). λ_{max} 210 (ϵ 10000) (EtOH).

24-Epimer: [249737-62-0] ***Atemoyacin D***
$C_{37}H_{66}O_8$ 638.924
Constit. of the seeds of *Annona atemoya* (custard apple). C-4, C-10 stereochem. not known.



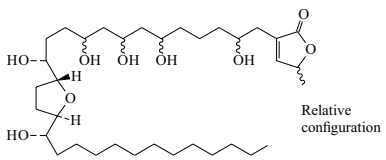
19,20-Diepimer: ***Purpuracenin***
$C_{37}H_{66}O_8$ 638.924
Constit. of the seeds of *Annona purpurea* (soncoya). Pale yellow wax. Mp 42-44°. $[\alpha]_D$ +26 (c, 1 in MeOH). λ_{max} 207 (log ϵ 4.32) (MeOH).

20,24-Diepimer: [184240-39-9] ***10-Hydroxytrilobacin***
$C_{37}H_{66}O_8$ 638.924
Constit. of *Asimina triloba* (pawpaw). Oil. $[\alpha]_D^{22}$ +8.3 (c, 0.36 in $CHCl_3$).

Stereoisomer: [184240-38-8] ***10-Hydroxyasimicin***
$C_{37}H_{66}O_8$ 638.924
Constit. of *Asimina triloba* (pawpaw). Wax. $[\alpha]_D$ +17.3 (c, 0.22 in $CHCl_3$). Epimeric with Annoglaucin at C-24; C-4,C-10 configs. not known.

Etcheverry, S. *et al., Phytochemistry*, 1995, **38**, 1423-1426 (*Annoglaucin*)
He, K. *et al., J. Nat. Prod.*, 1996, **59**, 1029-1034 (*10-Hydroxyasimicin, 10-Hydroxytrilobicin*)
Wu, P. *et al., CA*, 1999, **131**, 334564f (*Atemoyacin D*)
Chavez, D. *et al., Phytochemistry*, 1999, **50**, 823-828 (*Purpuracenin*)

Annoglaxin A-342

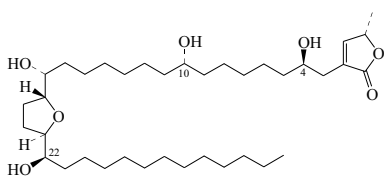


$C_{35}H_{62}O_8$ 610.87
Constit. of the leaves of *Annona glabra* (pond apple). Waxy powder. $[\alpha]_D^{25}$ +14.7 ($CHCl_3$).

Liu, X.-X. *et al., J. Nat. Prod.*, 1999, **62**, 848-852 (*isol, ir, pmr, cmr, ms*)

Annohexocin A-343

[167696-97-1]



$C_{35}H_{64}O_9$ 628.885
Constit. of the leaves of *Annona muricata* (soursop). Powder. $[\alpha]_D^{22}$ +18.5 (c, 0.3 in $CHCl_3$). λ_{max} 208 (ϵ 1740) (MeOH).

Zeng, L. *et al., Bioorg. Med. Chem. Lett.*, 1995, **5**, 1865-1868 (*isol, uv, pmr, cmr*)

Annomontacin A-344

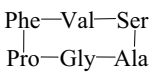
[137550-92-6]

$C_{37}H_{68}O_7$ 624.94
Solid. Mp 70-72° (34-36°). $[\alpha]_D^{20}$ +81 (c, 1 in MeOH). λ_{max} 224 (ϵ 16600) (MeOH) (Berdy).

4-Deoxy: [189630-57-7] ***4-Deoxyannomontacin***
$C_{37}H_{68}O_6$ 608.941
Wax. $[\alpha]_D^{25}$ +10.9 (c, 0.06 in $CHCl_3$). λ_{max} 228 (log ϵ 2.86) (MeOH).

*10-Deoxy, 15*S*-hydroxy:* ***Asitrilobin C***
$C_{37}H_{68}O_7$ 624.94
Constit. of *Asimina triloba* (pawpaw). Powder. Mp 85.3-86.4°. $[\alpha]_D$ -8 (c, 0.005 in CH_2Cl_2). λ_{max} 226 (log ϵ 3.7) (MeOH).

22-Epimer: [170900-29-5] ***Annomutacin***
$C_{37}H_{68}O_7$ 624.94
Constit. of *Annona muricata* (soursop). $[\alpha]_D$ +60 (c, 0.001 in EtOH). Possesses 4*R*,10ξ -config. λ_{max} 212 (ϵ 9200) (MeOH) (Berdy).



17,18-Diepimer: **cis-*Annomontacin***
$C_{37}H_{68}O_7$ 624.94
Constit. of the seeds of *Annona muricata* (soursop). Waxy solid. $[\alpha]_D^{25}$ +36.5 (c, 0.03 in $CHCl_3$). λ_{max} 210 (log ϵ 3.72) (MeOH).

Stereoisomer: ***Asitrilobin A***
$C_{37}H_{68}O_7$ 624.94
Constit. of the seeds of *Asimina triloba* (pawpaw). Amorph. powder. Mp 79.3-82.5°. $[\alpha]_D^{22}$ -2.6 (c, 0.03 in CH_2Cl_2). Partial relative config. is known λ_{max} 226 (log ϵ 4.3) (MeOH).

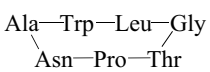
Annomuricatin A A-345

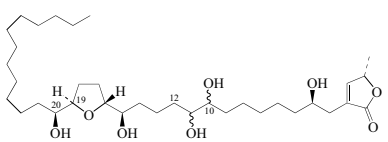


[173994-05-3]

$C_{27}H_{38}N_6O_7$ 558.633
Cyclic peptide. Constit. of the seeds of *Annona muricata* (soursop). Needles (MeOH). Mp 285-287°. $[\alpha]_D^{23}$ +11.28 (c, 0.4 in Py). λ_{max} 202 (ϵ 2800) (EtOH).

Li, C.-M. *et al., Yunnan Zhiwu Yanjiu*, 1995, **17**, 459-462; *CA*, **124**, 170600 (*isol, pmr, ms*)

Annomuricatin B A-346



$C_{35}H_{49}N_9O_9$ 739.827
Cyclic peptide. Constit. of the seeds of *Annona muricata* (soursop). Needles ($CHCl_3$/MeOH). Mp 213°. $[\alpha]_D^{19}$ -37.2 (c, 0.5 in MeOH). λ_{max} 204 (log ϵ 3.49); 221 (log ϵ 3.53); 282 (log ϵ 2.65); 290 (log ϵ 2.61) (MeOH).

Li, C.-M. *et al., Phytochemistry*, 1998, **48**, 555-556 (*isol, uv, ir, pmr, cmr, ms*)

Annomuricin A A-347

[167172-78-3]

$C_{35}H_{64}O_8$ 612.886
Constit. of the leaves of *Annona muricata* (soursop). Amorph. powder. $[\alpha]_D^{22}$ -6.4. Possesses *threo*-config. at C-10/C-11. Abs. config. of remainder of struct. is known λ_{max} 220 (ϵ 3100) (MeOH) (Berdy).

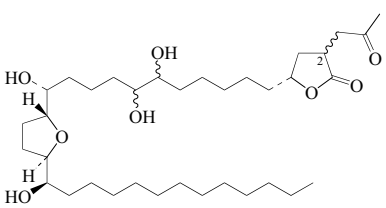
11-Deoxy, 12-hydroxy: [167355-38-6] ***Muricatocin B***
$C_{35}H_{64}O_8$ 612.886
Constit. of the leaves of *Annona muricata* (soursop). Powder. $[\alpha]_D^{22}$ +62.5 (c, 0.001 in EtOH). λ_{max} 214 (ϵ 9500) (MeOH).

10- or 11-Epimer: [167355-37-5] ***Annomuricin B***
$C_{35}H_{64}O_8$ 612.886
Constit. of *Annona muricata* (soursop). Amorph. powder. $[\alpha]_D^{22}$ -11.7. Possesses *erythro*-config. at C-10/C-11 λ_{max} 220 (ϵ 3000) (MeOH) (Berdy).

10- or 12-Epimer, 11-deoxy, 12-hydroxy: [167355-40-0] ***Muricatocin C***
$C_{35}H_{64}O_8$ 612.886
Constit. of the leaves of *Annona muricata* (soursop). Powder. $[\alpha]_D^{22}$ +32.5 (c, 0.001 in EtOH). λ_{max} 225 (ϵ 9100) (MeOH).

20-Epimer: [167355-39-7] ***Annomuricin C***
$C_{35}H_{64}O_8$ 612.886
Constit. of the leaves of *Annona muricata* (soursop). Powder. $[\alpha]_D^{22}$ +57.7 (c, 0.0005 in EtOH). Possesses *threo*-config. at C-10/C-11 λ_{max} 220 (ϵ 3800) (MeOH).

20-Epimer, 11-deoxy, 12-hydroxy: [167172-79-4] ***Muricatocin A***
$C_{35}H_{64}O_8$ 612.886
Constit. of the leaves of *Annona muricata* (soursop). Powder. $[\alpha]_D^{22}$ +21.8 (c, 0.001 in EtOH). λ_{max} 216 (ϵ 8500) (MeOH).



10,20- or 11,20-Diepimer: ***Annomuricin E***
$C_{35}H_{64}O_8$ 612.886
Constit. of the leaves of *Annona muricata* (soursop). Solid. $[\alpha]_D$ +12.5 (c, 0.04 in MeOH). Possesses *erythro*-config. at C-10/C-11 λ_{max} 218 (log ϵ 3.76) (MeOH).

Stereoisomer: [205814-19-3] ***Cheliensisin B***
$C_{35}H_{64}O_8$ 612.886

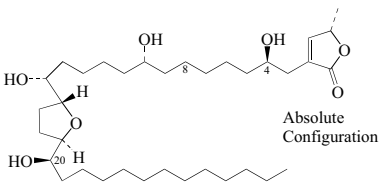
[184093-47-8, 184093-48-9]



$C_{35}H_{64}O_8$ 612.886
Constit. of *Annona muricata* (soursop). Powder. $[\alpha]_D^{25}$ +15 (c, 10 in $CHCl_3$). Obt. as a 1:1 mixture of C-2 epimers λ_{max} 205 (ϵ 7750) (MeOH).

Zeng, L. *et al., J. Nat. Prod.*, 1996, **59**, 1035-1042 (*isol, uv, ir, pmr, cmr, ms*)

Annonacin A-349

[111035-65-5]

[129212-95-9, 152985-32-5]
Annonacin 1. Howiicin A

$C_{35}H_{64}O_7$ 596.886

MF incorr. given as C_{33} in CA. Closely related to Goniothalamicin, G-296. Constit. of *Annona* spp.. Sol. MeOH, C_6H_6, hexane; poorly sol. H_2O. Mp 57° Mp 65-67° Mp 82-83.5°. $[\alpha]_D$ +20.8 (c, 5 in $CHCl_3$). λ_{max} 210 (ϵ 10700) (MeOH) (Derep). λ_{max} 207 (ϵ 15390) (2-propanol) (Berdy).

4-Ac: [183551-74-8] ***4-Acetylannonacin***
$C_{37}H_{66}O_8$ 638.924
Wax. Mp 67-68°. $[\alpha]_D^{21}$ +13 (c, 0.1 in MeOH).

10-Ketone: [123266-21-7] ***Annonacin-10-one***. *Annonacinone*
$C_{35}H_{62}O_7$ 594.871
Constit. of *Annona muricata* (soursop). Cryst. Sol. MeOH, C_6H_6, $CHCl_3$; fairly sol. hexane; poorly sol. H_2O. Mp 73-75°. $[\alpha]_D^{20}$ +31.1 (c, 0.06 in MeOH).

8-Hydroxy: [144182-25-2] ***8-Hydroxyannonacin***. *Gardnerin*
$C_{35}H_{64}O_8$ 612.886
Waxy solid. $[\alpha]_D$ +6.1 (c, 0.12 in MeOH). Stereochem. not confirmed. Stereochem. identity of 8-Hydroxyannonacin and Gardnerin not certain λ_{max} 209 (ϵ 16600) (MeOH) (Berdy).

8-Hydroxy, 10-ketone: ***Montanacin B***
$C_{35}H_{62}O_8$ 610.87
Solid. Stereochem. not fully determined.

4-Deoxy: [133352-34-8]

[152985-34-7] ***Corossoline***. *Howiicin C*
$C_{35}H_{64}O_6$ 580.887
Constit. of *Annona muricata* (soursop). Cryst. (EtOAc). Mp 45-50° Mp 83-85°. $[\alpha]_D$ +24 (c, 3.4 in $CHCl_3$). $[\alpha]_D$ +19 (c, 0.2 in MeOH).

4-Deoxy, 10-ketone: [133352-33-7] ***Corossolone***
$C_{35}H_{62}O_6$ 578.871

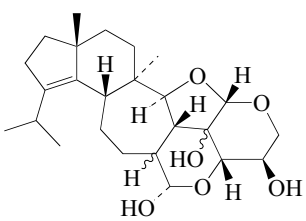
Antibiotic BE 23372M A-365

[145588-13-2]
5-(3,4-Dihydroxyphenyl)-3-[(3,5-dihydroxyphenyl)methylene]-2(3H)-furanone. BE 23372M

$C_{17}H_{12}O_6$ 312.278
Sol. MeOH, DMSO, Me_2CO; fairly sol. $CHCl_3$, EtOAc; poorly sol. hexane. λ_{max} 266 (ϵ 8800); 426 (ϵ 20400) (MeOH) (Derep).



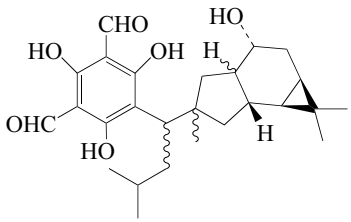
(E)-form

Prod. by *Rhizoctonia solani* found on the bark of *Ginkgo biloba* (ginkgo). Red-orange solid. Mp 265-270° dec. Similar to Aspulvinone G λ_{max} 266 (ϵ 8800); 426 (ϵ 20400) (MeOH).

Japan. Pat., 1992, 92 275 284; *CA*, **118**, 58224 (*isol, pmr, cmr, uv, ir, activity*)
Okabe, T. *et al., J. Antibiot.*, 1994, **47**, 289; 294; 297

Antibiotic CJ 14258 A-366

CJ 14258



$C_{25}H_{38}O_6$ 434.572
Prod. by *Hericium ramosum*. Powder. $[\alpha]_D^{25}$ -73.4 (c, 0.74 in MeOH).

Saito, T. *et al., J. Antibiot.*, 1998, **51**, 983-990 (*isol, ir, pmr, cmr*)

Antibiotic GR 95647X A-367

GR 95647X

$C_{26}H_{36}O_6$ 444.567
Related to Euglobal V, E-388. Constit. of *Eucalyptus globulus* (Tasmanian blue gum).

Noble, H.M. *et al., Planta Med.*, 1990, **56**, 647 (*isol*)

Raphanus sativus Antifungal peptides A-368

RS-AFP

Highly-basic polypeptides containing 51 amino acids; rich in cysteine. Four components characterised. Isol. from radish seeds (*Raphanus sativus*).

Terras, F.R. *et al., J. Biol. Chem.*, 1992, **267**, 15301-15309 (*AFP 1, AFP 2, isol, struct*)

$C_{27}H_{36}O_2$ 392.58
Prob. isol. from Sinton citrangequat. λ_{max} 444 (EtOH).

Yokoyama, H. *et al., Phytochemistry*, 1966, **5**, 1159 (*isol*)
Ellis, P.R. *et al., Helv. Chim. Acta*, 1981, **64**, 1092 (*synth*)

Arabic acid, 9CI, 8CI A-385

[32609-14-6]

A highly branched polysaccharide composed of L-Arabinose, D-Galactose, L-Rhamnose and D-Gluconic acid in an approximate 3:3:1:1 ratio.

Mixed salts: [9000-01-5] *Gum arabic. Australian gum. Acacia gum. Wattle gum. E414. FEMA 2001*
Stabiliser for soft drink and flavour emulsions; encapsulating agent to protect lipid or liposoluble materials that are sensitive to decomposition; texturising or filming agent in confectionary; gelling agent or carrier in reduced calorie applications; clarification and stabilising aid in wines. Yellowish-amber lumps. Dissolves slowly in H_2O.

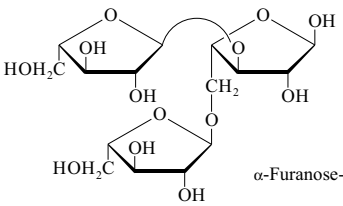
Arabinan, 9CI, 8CI A-386

[11078-27-6]
Araban

Portion of idealised structure

$C_5H_8O_4$ 132.116
A polymer of linearly α-(1→5)-linked L-



arabinofuranose units with single L-arabinofuranose α-(1→3)-linked to the main chain at intervals. Polymeric. Minimum formula given. Arabinans devoid of other sugars have been isol. from mustard seeds. Heteroarabinans have been found in sugar beet and apples. $[\alpha]_D$ -157. $[\alpha]_D$ -114. $[\alpha]_D$ -129 (H_2O).

Ac:
$[\alpha]_D^{20}$ -90 (Me_2CO).

Argon A-407

[7440-37-1]
E938

Ar

Ar 39.948

Atomic No. 18. Ground state electron config. [Ne]$3s^23p^6$. Discovered in air in 1894 by Sir W. Ramsey and M.W. Travers. There are 8 isotopes of which 3 are natural. Abundance: 9300 ppm in air (by vol.). Solid state struct. is ccp or hcp (metastable). Inert atmosphere for wine and fruit or vegetable juice containers. Generally recognised as safe (GRAS) in the USA. Colourless, odourless, tasteless, monatomic gas. Forms no true chemical compds. Forms clathrates with H_2O and hydroquinone. Forms complex with HBr. Sol. H_2O (33.6 cm^3 kg^{-1} at 20°). Mp -189.4°. Bp -185.9°. Forms clathrate compds. with phenols.

Vitamin C*. Vitamin C*[3]*. Ascorbicap. Cebione. Celaskon. Cenolate. Cevalin. Cevital. Citrovit. Roscorbic. Vitacimin. Vitascorbol. E300*
Occurs widely in animals and plants. Good sources are citrus fruits and hip berries. Isol. from ox adrenal cortex, lemons and paprika. Prod. industrially on a large scale from glucose. Vitamin (antiscorbutic), antioxidant, nutrient, preservative consistency enhancer. Used to reduce discoloration, mainly browning caused by polyphenol oxidase, in fruit and vegetable products. Used to enhance colour formn. and to reduced the formn. of nitrosamines in meat products. Used synergistically with Sulfur dioxide, S-277 in wine and beer as a preservative. Assists formn. of the gluten network in bread making, thus enhancing bread volume. Mp 190-192°. $[\alpha]_D^{25}$ +24 (c, 1 in H_2O). $[\alpha]_D^{18}$ +49 (MeOH). pK_{a2} 11.34 (25°, 0.1*M* KNO_3). Component of numerous preparations.

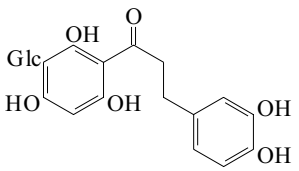
$C_{37}H_{68}O_7$ 624.94
Constit. of *Asimina triloba* (pawpaw). Powder. Mp 87.2-88.1°. $[\alpha]_D^{20}$ -4 (c, 0.005 in CH_2Cl_2). λ_{max} 226 (log ε 3.7) (MeOH).

Woo, M.-H. *et al., Bioorg. Med. Chem.*, 2000, **8**, 285-290

Asitrocinone A-458

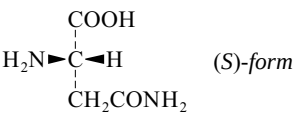


$C_{35}H_{64}O_7$ 596.886
Constit. of the seeds of *Asimina triloba* (pawpaw). Powder. $[\alpha]_D^{23}$ +13.2 (c, 0.005 in CH_2Cl_2). Mixt. of 2,4-*cis*-and *trans*-isomers λ_{max} 205 (log ε 3.6) (MeOH).

Kim, E.-J. *et al., J. Nat. Prod.*, 2000, **63**, 1503-1506

Aspalathin A-459

1-(3-C-β-D-Glucopyranosyl-2,4,6-trihydroxyphenyl)-3-(3,4-dihydroxyphenyl)-1-propanone. 3′-Glucosyl-2′,3,4,4′,6′-pentahydroxydihydrochalcone



$C_{21}H_{24}O_{11}$ 452.414
Constit. of *Aspalathus linearis* (rooibos). Amorph. Sol. H_2O. $[\alpha]_D^{20}$ +34.7 (c, 2.14 in EtOH). $[\alpha]_D$ +58.4 (c, 2.21 in Me_2CO).

Nona-Ac:
Fine needles (EtOH). Mp 153-154°. $[\alpha]_D^{25}$ -35.8 (c, 2.16 in Me_2CO).

Koeppen, B.H. *et al., Tet. Lett.*, 1965, 3497; *Biochem. J.*, 1966, **99**, 604 (*isol, struct*)

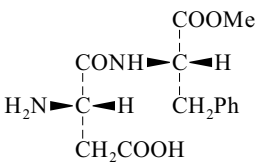
Asparagine, 9CI A-460

[7006-34-0]
2,4-Diamino-4-oxobutanoic acid. Aspartic acid β-monoamide. β-Asparagine. Asparamide. Altheine. Asn

$C_4H_8N_2O_3$ 132.119
Derivs. labelled *N* (here and in 9CI) refer to those subst. on the amide (or N^4) nitrogen; N^2 refers to subst. on amino group.

(R)-form [2058-58-4]

[5794-24-1]
D-form
Cryst. + $1H_2O$. Mp 234-235°. $[\alpha]_D^{15}$ +5.4 (H_2O).



(S)-form [70-47-3]
L-form
One of the nonessential amino acids. Dietary supplement, nutrient. Widely distributed in the plant kingdom. Isol. from asparagus, beetroot, peas, beans, etc.. Rhombic hemihedral cryst. + $1H_2O$ (H_2O). Mod. sol. H_2O (3.1g/100g at 25°). Mp 234-235° (rapid heat) Mp 226-227° dec. (slow heat). $[\alpha]_D^{25}$ -7.4 (c, 2 in H_2O). $[\alpha]_D$ +33.2 (3*M* HCl). pK_{a2} 8.6 (NH_2). Isoelectric point 5.41. Bitter taste.

(±)-form [3130-87-8]
Cryst. + $1H_2O$ (EtOH/HCl aq.). Loses H_2O at 210°, dec. at 280-5°.

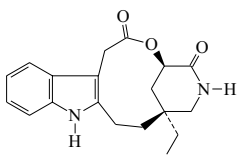
Asperxanthone A-466

[3566-99-2]

5-Hydroxy-8,10-dimethoxy-2-methyl-4H-naphtho[1,2-b]pyran-4-one, 9CI. Flavasperone. Antibiotic TMC 256C2. TMC 256C2



$C_{16}H_{14}O_5$ 286.284
Constit. of *Aspergillus niger*, *Aspergillus awamori* and *Aspergillus fonsecaeus*. Isol. from *A. niger* infected mango fruits and peanuts. Yellow needles ($CHCl_3$/EtOH). Mp 203°. λ_{max} 282 (ϵ 22400); 370 (ϵ 46400) (MeOH) (Berdy). λ_{max} 241 (ϵ 38400) (EtOH) (Berdy).

*10-*O*-De-Me, 10-*O*-[β-D-glucopyranosyl-(1→6)-β-D-glucopyranoside]:* [200127-93-1] *10-*O*-Demethylflavasperone 10-gentiobioside. Isorubrofusarin 10-gentiobioside*
$C_{27}H_{32}O_{15}$ 596.541
Constit. of the seeds of *Cassia tora* (charota). Yellow powder. $[\alpha]_D$ -14 (c, 0.1 in Py). λ_{max} 240 (log ϵ 4.49); 248 (sh) (log ϵ 4.39); 279 (log ϵ 4.35); 313 (sh) (log ϵ 3.84); 367 (log ϵ 3.5) (MeOH).

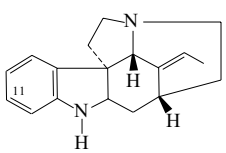
Aspidochibine A-467

[139955-86-5]
Alkaloid AQC2



Relative configuration

$C_{19}H_{22}N_2O_3$ 326.394
New structural class of the quebrachamine series. Alkaloid from cell cultures of *Aspidosperma quebracho-blanco* (quebracho). Amorph.

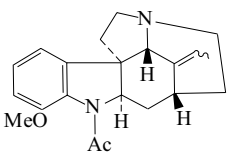
Aimi, N. *et al., Tet. Lett.*, 1991, **32**, 4949 (*isol, pmr, cmr, struct*)

Aspidospermatidine A-468

[3890-05-9]
14,19-Didehydrocondyfolan, 9CI

Absolute configuration

$C_{18}H_{22}N_2$ 266.385
Alkaloid from *Aspidosperma quebracho-blanco* (quebracho). Cryst. (Et_2O/hexane). Mp 168-170° Mp 184-186°.



N-*Ac:***N-*Acetylaspidospermatidine***
$C_{20}H_{24}N_2O$ 308.422
Noncryst. $[\alpha]_D$ -28 (EtOH).

N-*Me:***N-*Methylaspidospermatidine***
$C_{19}H_{24}N_2$ 280.412
Alkaloid in *Aspidosperma quebracho-blanco* (quebracho). Amorph.

11-Hydroxy, N-*Ac:***N-*Acetyl-11-hydroxyaspidospermatidine***
$C_{20}H_{24}N_2O_2$ 324.422
Noncryst.

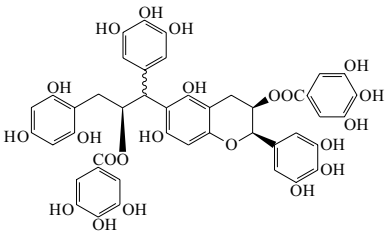
Assamicain A A-472

[121795-66-2]

Absolute configuration

$C_{44}H_{36}O_{22}$ 916.755
Isol. from the leaves of *Camellia sinensis* var. *assamica* (Assam tea). Off-white amorph. powder + $3H_2O$. $[\alpha]_D^{17}$ -120 (c, 1.0 in Me_2CO).



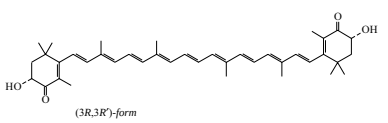
1′-Epimer: [121844-27-7] ***Assamicain B***

$C_{44}H_{36}O_{22}$ 916.755
Isol. from leaves of *Camellia sinensis* var. *assamica* (Assam tea). Off-white amorph. powder + $5H_2O$. $[\alpha]_D^{17}$ -54.3 (c, 1.0 in Me_2CO).

Hashimoto, F. *et al., Chem. Pharm. Bull.*, 1989, **37**, 77 (*isol, pmr, cmr*)

Assamicain C A-473

[121795-67-3]



$C_{44}H_{36}O_{22}$ 916.755
Derived from the leaves of *Camellia sinensis* var. *assamica* (Assam tea). Off-white amorph. powder + $5H_2O$. $[\alpha]_D^{17}$ +60.5 (c, 1.3 in Me_2CO).

Hashimoto, F. *et al., Chem. Pharm. Bull.*, 1989, **37**, 77 (*isol, pmr, cmr, synth*)

Astaxanthin A-474

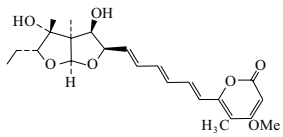
[7542-45-2]
3,3′-Dihydroxy-β,β-carotene-4,4′-dione. 3,3′-Dihydroxycanthaxanthin. 3,3′-Dihydroxy-4,4′-diketo-β-carotene. Ovoester

$C_{40}H_{52}O_4$ 596.848

(3R,3′R)-form [60760-95-4]
Mp 222-223°. CD:$\Delta\epsilon_{385}$ -6.2, $\Delta\epsilon_{324}$ +24.0 λ_{max} 492 ($CHCl_3$).

(3S,3′S)-form [472-61-7]
Mp 223-225°. λ_{max} 472 (MeOH) (Berdy). λ_{max} 466 (hexane) (Berdy). λ_{max} 485 ($CHCl_3$) (Berdy). λ_{max} 492 ($CHCl_3$).

3-O-β-D-Glucopyranoside:
$C_{46}H_{62}O_9$ 758.99
λ_{max} 487 (C_6H_6).



(3′RS,3′SR)-form [71772-51-5]
Used in fish farming to induce trout flesh colouring. Red food dye. Mp 216-219°. Meso-isomer.

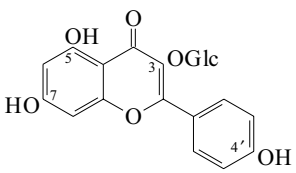
Astin I A-477

[161162-22-7]



$C_{25}H_{34}ClN_5O_7$ 552.026
Cyclic peptide antibiotic. Constit. of *Actinidia kolomikta* (kiwi fruit). Mp 174.1-176.5°. $[\alpha]_D$ -78.8 (c, 0.1 in MeOH).

Morita, H. *et al., Chem. Lett.*, 1994, 2009 (*isol, pmr, cmr*)
Wang, Y. *et al., CA*, 1995, **122**, 156308e (*isol*)

Astragalin A-478

[480-10-4]
3-O-β-D-Glucopyranosyloxy-4′,5,7-trihydroxyflavone. Kaempferol 3-glucoside

$C_{21}H_{20}O_{11}$ 448.382
Present in red wine. Isol. from many plant spp.. Yellow needles. Mp 178°. $[\alpha]_D^{18}$ +16.9 (c, 0.62 in MeOH). Log P -2.32 (calc).

▶ DJ3080000

2″-O-β-D-Apiofuranosyl: [99816-59-8]
$C_{26}H_{28}O_{15}$ 580.498
Possibly isol. from the leaves of *Cicer arietinum* (chickpea). Yellowish powder. Mp 165-170°. The *Cicer arietinum* isolate was not fully characterised structurally and had no phys. props. reported.

2″-O-β-D-Xylopyranosyl, 6″-O-α-L-rhamnopyranosyl: [131573-90-5] ***Camelliaside B***. *Astragalin 2″-xyloside 6″-rhamnoside*
$C_{32}H_{38}O_{19}$ 726.641
Isol. from China tea (*Camellia sinensis*) seeds. Yellow solid. Mp 194-196°. $[\alpha]_D$ -57.4 (c, 0.36 in MeOH).

O″-Xylosyl:
$C_{26}H_{28}O_{15}$ 580.498
Isol. from French beans.

2″-O-β-D-Galactopyranosyl: [152390-63-1] ***Camelliaside C***
$C_{27}H_{30}O_{16}$ 610.524
Constit. of China tea (*Camellia sinensis*) seeds. Yellow solid. Mp 200-202°. $[\alpha]_D$ -45.9 (c, 0.025 in MeOH). May be identical with the prev. isolated *Heuchera* galactoside above.

2″-O-β-D-Galactopyranosyl, 6″-O-α-L-

rhamnopyranosyl: [135095-52-2] ***Camelliaside A***. *Astragalin 2″-galactoside 6″-rhamnoside*
$C_{33}H_{40}O_{20}$ 756.667
Isol. from China tea (*Camellia sinensis*) seeds. Yellow solid. Mp 203-205°. $[\alpha]_D$ -39.6 (c, 0.35 in MeOH).

2″-O-β-D-Glucopyranosyl, 6″-O-α-L-rhamnopyranosyl: [55696-58-7] *Astragalin 2″-glucoside 6″-rhamnoside. Kaempferol 3-(2″-glucosylrutinoside). Kaempferol 3-(6″-rhamnosylsophoroside)*
$C_{33}H_{40}O_{20}$ 756.667
Isol. from *Solanum* spp. and soya beans.

2″-O-β-D-Glucopyranosyl, 7-O-[4-hydroxy-3-methoxycinnamoyl-(→2)-β-D-glucopyranoside]: [87891-34-7] *Kaempferol 3-sophoroside 7-(2-feruloylglucoside)*
$C_{43}H_{48}O_{24}$ 948.838
Isol. from Chinese chives (*Allium tuberosum*). Yellow powder + $1H_2O$ (EtOH aq.). Mp 212-215°. $[\alpha]_D^{22}$ -84.9 (c, 1 in Py).

2″-O-β-D-Glucopyranosyl, 7-O-β-D-glucuronopyranoside: [140163-56-0] *Kaempferol 3-sophoroside 7-glucuronide*
$C_{33}H_{38}O_{22}$ 786.65
Isol. from alliums incl. onion (*Allium cepa*) epidermis. Yellow-green powder.

2″-O-(6-O-Acetyl-β-D-glucopyranosyl): [133763-02-7]
$C_{29}H_{32}O_{17}$ 652.562
Constit. of the flower petals of saffron (*Crocus sativus*).

*2″-O-[4-Hydroxy-*E*-cinnamoyl-(→2)-β-D-glucopyranosyl], 7-O-β-D-glucopyranoside:* [151649-64-8] *Kaempferol 3-(2-*p*-coumaroylsophoroside) 7-glucoside*
$C_{42}H_{46}O_{23}$ 918.812
Constit. of *Brassica oleracea* (cabbage) leaves.

*2″-O-[4-Hydroxy-3-methoxy-*E*-cinnamoyl-(→2)-β-D-glucopyranosyl], 7-O-β-D-glucopyranoside:* [151649-63-7] *Kaempferol 3-(2-feruloylsophoroside) 7-glucoside*
$C_{43}H_{48}O_{24}$ 948.838
Constit. of *Brassica oleracea* (cabbage) leaves.

2″-O-[4-Hydroxy-3,5-dimethoxycinnamoyl-(→2)-β-D-glucopyranosyl], 7-O-β-D-glucopyranoside: [112294-86-7] *Kaempferol 3-(2-sinapoylsophoroside) 7-glucoside*
$C_{44}H_{50}O_{25}$ 978.864
Isol. from rape seeds (*Brassica napus*).

4′-O-β-D-Glucopyranoside: [71939-16-7] ***Allivicin***. *Kaempferol 3,4′-diglucoside*
$C_{27}H_{30}O_{16}$ 610.524
Isol. from caucas (*Allium victorialis*) and *Prunus* spp..

4′-O-β-D-Glucopyranoside, 7-O-[4-hydroxy-3-methoxycinnamoyl-(→2)-β-D-glucopyranoside]: [108887-46-3] *Kaempferol 3,4′-diglucoside 7-(2-feruloylglucoside)*
$C_{43}H_{48}O_{24}$ 948.838
Isol. from Chinese chives (*Allium tuberosum*) leaf. Pale yellow powder + $2H_2O$ (EtOH aq.). Mp 214-217°. $[\alpha]_D^{22}$ -39.9 (c, 0.26 in Py).

6″-O-[α-L-Rhamnopyranosyl-(1→2)-α-L-rhamnopyranosyl]: [32602-83-8]
$C_{33}H_{40}O_{19}$ 740.668
Isol. from hop flowers *Humulus lupulus*.

6″-O-[β-D-Glucopyranosyl-(1→3)-α-L-rhamnopyranosyl]: [136449-09-7] *Kaempferol 3-(3^R-glucosylrutinoside)*
$C_{33}H_{40}O_{20}$ 756.667
Isol. from black tea (*Camellia sinensis*).

2″-O-[β-D-Glucopyranosyl-(1→2)-β-D-galactopyranosyl]: [197250-98-9]
$C_{33}H_{40}O_{21}$ 772.666
Constit. of the seeds of black cumin (*Nigella sativa*). λ_{max} 265 ; 300 (sh) ; 348 (MeOH).

Mono-Ac: [36310-43-7] ***Acetylastragalin***
$C_{23}H_{22}O_{12}$ 490.42
Isol. from liquorice (*Glycyrrhiza glabra*). Full struct. not determined. May be identical with the 6″-Ac above.

6″-O-Malonoyl: [81149-02-2] *6″-Malonylastragalin*
$C_{24}H_{22}O_{14}$ 534.429
Constit. of *Cicer* sp. and pears.

3″-O-β-Apiofuranosyl, 6″-O-malonyl: [119067-83-3]
$C_{29}H_{30}O_{18}$ 666.545
Isol. from *Cicer arietinum* (chickpea) leaves and stems.

6″-O-(4-Carboxy-3-hydroxy-3-methylbutanoyl): [157407-84-6] *Kaempferol 3-[6-O-(3-hydroxy-3-methylglutaroyl)glucoside]*
$C_{27}H_{28}O_{15}$ 592.509
Constit. of aged callus cultures of lime (*Citrus aurantifolia*). Yellow powder (MeOH). Mp 210-213°.

6″-O-(4-Carboxy-3-hydroxy-3-methylbutanoyl), 7-O-β-D-glucopyranoside: [157407-85-7]
$C_{33}H_{38}O_{20}$ 754.651
Constit. of 10 year old callus cultures of lime (*Citrus aurantifolia*).

*2″-O-(*E*-4-Hydroxycinnamoyl):* [137018-32-7]

[189098-16-6] *Kaempferol 3-(*E*-p-coumarylglucoside)*
$C_{30}H_{26}O_{13}$ 594.528
Isol. from *Lithocarpus polystachya* tea. The *Z*-isomer was isol. in admixture with the *E*-isomer from *Eryngium campestre*.

6″-O-(4-Hydroxycinnamoyl), 4′-O-β-D-glucopyranoside: [87339-51-3]
$C_{36}H_{36}O_{18}$ 756.67
Isol. from Tartar bread plant (*Crambe tatarica*).

7-O-(4-Hydroxycinnamoyl): [51795-36-9]
$C_{30}H_{26}O_{13}$ 594.528
Constit. of *Elaeagnus angustifolia* (Russian olive).

2″,4″-Bis-O-(4-hydroxycinnamoyl): [85122-24-3]
$C_{39}H_{32}O_{15}$ 740.673
Isol. from *Quercus ilex* (holly oak). Needles (MeOH aq.). Dec. above 280°.

2″,6″-Bis-O-(4-hydroxycinnamoyl): [94474-74-5]
$C_{39}H_{32}O_{15}$ 740.673
Isol. from *Quercus ilex* (holly oak). Amorph.

*6″-O-(3,4-Dihydroxy-*E*-cinnamoyl):* [190328-43-9] *6″-O-Caffeoylastragalin*
$C_{30}H_{26}O_{14}$ 610.527
Constit. of young bracken fronds (*Pteridium aquilinium*).

2″-O-(4-Hydroxy-3-methoxycinnamoyl), 4′,7-di-O-β-D-glucopyranoside: [108887-47-4] *Kaempferol 3-(2-feruloylglucoside) 4′,7-diglucoside*
$C_{43}H_{48}O_{24}$ 948.838
Isol. from Chinese chives (*Allium tuberosum*). Amorph. solid + $1H_2O$ (H_2O). Mp 235-238°. $[\alpha]_D^{22}$ -206 (c, 0.22 in Py).

2″-O-(4-Hydroxy-3,5-dimethoxycinnamoyl), 7-O-[β-D-glucopyranosyl-(1→2)-β-D-glucopyranoside]: [112208-89-6] *Kaempferol 3-(sinapoylglucoside) 7-sophoroside*
$C_{44}H_{50}O_{25}$ 978.864
Isol. from rapeseed (*Brassica napus*).

[172549-38-1]

$C_{18}H_{15}NO_5$ 325.32

Isol. from oat, *Avena sativa*, inoculated with *Puccinia coronata* f.sp. *avenae*. Yellow cryst. Mp 267-269°. λ_{max} 355 (log ϵ 4.8) (MeOH).

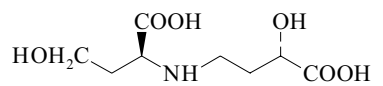
Miyagawa, H. *et al., Biosci., Biotechnol., Biochem.*, 1995, **59**, 2305-2306 (*isol, uv, pmr*)
Ishihara, A. *et al., Phytochemistry*, 1999, **50**, 237-242 (*biosynth*)

Avenic acid A A-509

[76224-57-2]

N-*[3-(3-Hydroxy-3-carboxypropylamino)-3-carboxypropyl]homoserine, 9CI*

$C_{12}H_{22}N_2O_8$ 322.314



Isol. from root washings of *Avena sativa* (oats). Mp 300°. $[\alpha]_D$ +16.4 (c, 0.11 in 2N HCl).

Fushiya, S. *et al., Tet. Lett.*, 1980, 3071 (*isol, struct*)
Fushiya, S. *et al., Chem. Lett.*, 1981, 909 (*synth*)

Avenic acid B A-510

[76224-58-3]

N-*(3-Carboxy-3-hydroxypropyl)-L-homoserine, 9CI*

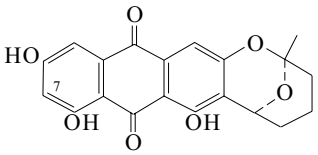
$C_8H_{15}NO_6$ 221.21

Constit. of the roots of *Avena sativa* (oats). Amorph. solid.

Fushiya, S. *et al., Chem. Lett.*, 1980, 1215 (*isol, pmr, cmr, synth*)
Ripperger, H. *et al., Heterocycles*, 1982, **17**, 447 (*rev*)

Avenothionin A-511

Peptides. Analogs of purothionins. Two avenothionins (α- and β-) have been characterized. They contain 45 AA residues including 8 cysteines. Isol. from oat (*Avena sativa*).



[79468-42-1, 79468-43-2]

Bekes, F. *et al., Cereal Chem.*, 1981, **58**, 360 (*isol*)

Averufin A-512

[14016-29-6]

*3,4,5,6-Tetrahydro-7,9,11-trihydroxy-2-methyl-2,6-epoxy-2*H*-anthra[2,3-*b*]oxocin-8,13-dione, 9CI*

$C_{20}H_{16}O_7$ 368.342

Bright orange-red laths (Me_2CO). Sol. MeOH, C_6H_6, bases; poorly sol. H_2O. Mp 280-282° dec. $[\alpha]_D$ 0. λ_{max} 223 (ϵ 34673); 266 (ϵ 18200); 294 (ϵ 33100); 324 (ϵ 9550); 453 (ϵ 10715) (EtOH) (Berdy).

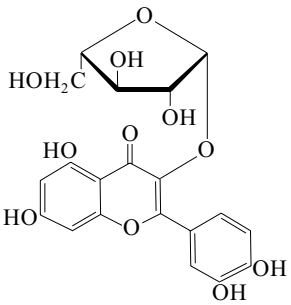
▶ Shows mutagenic activity. KC4150000

Tri-Ac: [74810-25-6]
$C_{26}H_{22}O_{10}$ 494.454
Yellow needles (EtOH). Mp 210-214°. $[\alpha]_D$ -14.9 (c, 0.424 in $CHCl_3$).

6,8-Di-Me ether: [61470-56-2]

[79896-27-8] *6,8-Di-O-methylaverufin. Antibiotic SIPI 8917-I. SIPI 8917-I*
$C_{22}H_{20}O_7$ 396.396
Prod. by rice inoculated with *Emericella foeniculicola* and from a fungal isolate SIPI-8917. Cryst. (Me_2CO). Mp 208-209°. λ_{max} 225 ; 250 ; 287 ; 313 ; 439 (MeOH).

Tri-Me ether: [15894-83-4]
$C_{23}H_{22}O_7$ 410.423
Yellow prisms. Mp 190-191°.



7-Methoxy: [95963-94-3] ***7-Methoxyaverufin***
$C_{21}H_{18}O_8$ 398.368
Yellow cryst. (Me_2CO). Mp 198-200° dec.

Benzene B-17

[71-43-2]
Cyclohexatriene. [6]Annulene

C_6H_6 78.113

Used in processing of modified hop extract. Liq. V. spar. sol. H_2O; misc. most org. solvs. d_4^{20} 0.88. Mp 5.53°. Bp 80.8° (80.103°, 80.12°, 80.36°, 80.49°). n_D^{20} 1.5014. The name Benzene should not be confused with Benzol(e) (coml. products consisting mainly of benzene) or with Benzin(e) (obsolescent name for low-boiling petroleum spirit). The German name for Benzene is however Benzol. First isol. by Faraday in 1825.

► Highly flammable, fl. p. -11°. Human carcinogen. Direct skin contact with liq. causes erythema and vesiculation; prolonged contact can cause dermatitis. Acute exposure by ingestion or inhalation produces the symptoms of CNS depression, and depression of haematopoietic system. Prolonged or repeated exposure injures the bone marrow (often irreversibly) and depletes erythrocytes, leukocytes or platelets producing headache, fatigue, anorexia. More severe exposure is associated with development of pancytopenia and aplastic anaemia. Various forms of leukaemia are implicated in occup. exposures. MEL: long-term 5 ppm. CY1400000

Picrate:
Mp 82-84°. Readily dissociates on exp. to air.

Benzoic acid, 9CI, USAN B-31

[65-85-0]
Benzenecarboxylic acid. E210. FEMA 2131

PhCOOH

$C_7H_6O_2$ 122.123

For salts see Benzoic acid salts, B-32. Widespread in plants esp. in essential

oils and fruits, mostly in esterified form. Also present in butter, cooked meats, pork fat, white wine, black and green tea, mushroom and Bourbon vanilla. Used in foodstuffs as antimicrobial and flavouring agent and as preservative. In practical food preservation, the Na salt of benzoic acid is the most widely used form (see, Na salt). The antimicrobial activity comprises a wide range of microorganisms, particularly yeasts and moulds. Undissociated benzoic acid is more effective than dissociated, thus the preservative action is more efficient in acidic foodstuffs. Typical usage levels are 500-2000 ppm. Leaflets or needles (H_2O). Sol. MeOH, C_6H_6; fairly sol. hexane; v. spar. sol. H_2O. Mp 122°. Bp 249° Bp_{10} 133°. Log P 1.88 (calc). Steam-volatile λ_{max} 228 (E1%/1cm 728); 273 (E1%/1cm 93.2); 300 (E1%/1cm 46.8) (MeOH) (Berdy).

▶ Fl. p. 121°, autoignition temp. 570°. Eye, skin and mucous membrane irritant. Hypersensitivity reactions reported. Low systemic toxicity. Detoxification in humans occurs by conjugation with amino acids (mainly glycine resulting in hippuric acid). DG0875000

Me ester: [93-58-3] *Methyl benzoate. FEMA 2683*
$C_8H_8O_2$ 136.15
Present in various flower oils, banana, cherry, pimento berry, ceriman (*Monstera deliciosa*), clove bud and stem, mustard, coffee, black tea, dill, starfruit and cherimoya (*Annona cherimola*). Used in flavourings. Liq. with fruity odour. d_{25}^{25} 1.09. Fp -12.3. Bp 199.6° Bp_{24} 96-98°.

▶ Fl. p. 83°. Skin and eye irritant. LD_{50} (rat, orl) 1350 mg/kg. DH3850000

Et ester: [93-89-0] *Ethyl benzoate. FEMA 2422*
$C_9H_{10}O_2$ 150.177
Found in various fruits, e.g. apple, banana, sweet cherry. Also present in milk, butter, wines, black tea, bourbon vanilla and fruit brandies. Flavouring agent. Liq. with aromatic/fruity odour. d_4^{25} 1.04. Fp -34. Bp 212.9° Bp_{10} 87.2°. n_D^{20} 1.5045.

▶ Fl. p. 88°, autoignition temp. 490°. Skin and eye irritant. LD_{50} (rat, orl) 2100 mg/kg. DH0200000

Propyl ester: [2315-68-6] *Propyl benzoate. FEMA 2931*
$C_{10}H_{12}O_2$ 164.204
Present in cherry and clove stem, also in butter. Flavouring ingredient. Liq. with balsamic, nutty odour and sweet fruity-nutty flavour. d_{15}^{15} 1.03. Fp -51–52. Bp 230°. n_D^{20} 1.5100.

Isopropyl ester: [939-48-0] *Isopropyl benzoate. FEMA 2932*
$C_{10}H_{12}O_2$ 164.204
Present in feijoa fruit (*Feijoa sellowiana*), apple, pear, cocoa and honey. Flavouring ingredient. d_{15}^{15} 1.02. Bp 218-219°.

▶ Fl. p. 89/99°. Skin and eye irritant. LD_{50} (rat, orl) 3730 mg/kg. DH3150000

2-Propenyl ester: 2-Propen-1-ol, P-488

Benzyl ester: [120-51-4] ***Benzyl benzoate, USAN.*** *Ascabin. Benylate. Vanzoate. FEMA 2138. Many other names*
$C_{14}H_{12}O_2$ 212.248
Contained in Peru balsam and Tolu balsam. Isol. from other plants e.g. *Jasminum* spp., ylang-ylang oil. Used in food flavouring. Leaflets with balsamic/almond flavour and sharp, pungent flavour. d^{18} 1.11. Mp 21° (19.5°). Bp 323-324° (316-317°) $Bp_{0.1}$ 80-82°. Log P 3.88 (uncertain value) (calc). Spar. steam-volatile.

▶ Fl. p. 148°, autoignition temp. 480°. Eye, mucous membrane, and possible skin irritant. Hypersensitivity reactions reported. LD_{50} (rat, orl) 500 mg/kg. DG4200000

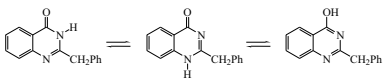
1-Benzyloxy-1-(2-methoxyethoxy)ethane B-60



[7492-39-9]
Benzyl methoxyethyl acetal. Acetaldehyde benzyl β-methoxyethyl acetal. FEMA 2148
$MeOCH_2CH_2OCH(CH_3)OCH_2Ph$
$C_{12}H_{18}O_3$ 210.272
Flavouring ingredient. Liq. with sweet, green, fruity odour.

Fenaroli's Handbook of Flavor Ingredients, 3rd edn., (ed. Burdock, G.A.), CRC Press, 1995, **2**, 63 (*props, use*)

2-Benzyl-4(3*H*)-quinazolinone B-61

[4765-56-4]

*2-(Phenylmethyl)-4(3*H*)-quinazolinone, 9CI. **Glycosminine**. Glycophymine. 2-Benzyl-4-hydroxyquinazoline. 2-(Phenylmethyl)-4-quinoxalinol*

$C_{15}H_{12}N_2O$ 236.273

Specific inhibitor of serine protease and human leucocyte elastase. Cryst. (MeOH, EtOH, $CHCl_3$ or C_6H_6). Mp 254-256° (248-249°).

OH-form

Me ether: [72361-61-6] *4-Methoxy-2-(phenylmethyl)quinazoline. 2-Benzyl-4-methoxyquinazoline.* ***Glycophymoline***

$C_{16}H_{14}N_2O$ 250.299

Cryst. (C_6H_6/MeOH). Mp 165°.

1H-form

N-*Me:* [6873-15-0] *1-Methyl-2-(phenylmethyl)-4(1*H*)-quinazolinone. 2-Benzyl-1-methyl-4(1*H*)-quinazolinone.* ***Arborine***. *Glycosine*

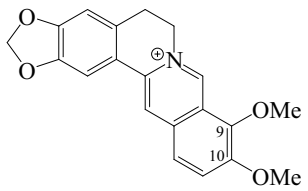
$C_{16}H_{14}N_2O$ 250.299

Major alkaloid from *Ruta graveolens* (rue). Cryst. (MeOH/$CHCl_3$). Mp 161-162° (155-156°).

N-*Me, hydrochloride:*

Cryst. + $2H_2O$ (H_2O). Mp 215° dec. (partial melting at 106-108°).

N-*Me, picrate:*



Yellow needles (EtOH). Mp 172-173°.

Biphenyl, 8CI, BSI, ISO B-91

[92-52-4]

1,1′-Biphenyl, 9CI. Phenylbenzene. Diphenyl. Bibenzene. E230. FEMA 3129

$C_{12}H_{10}$ 154.211

Fungistat, esp. for citrus fruits. Used as food preservative and flavouring agent. Detected in bilberry, wine grape, carrot, peas, rum, potato, bell pepper, tomato, butter, milk, smoked fatty fish, cocoa, coffee, roast peanuts, olive, buckwheat and tamarind. Generally, the fruit packaging is impregnated with biphenyl, which evaporates into the air space surrounding the fruit. Some biphenyl is absorbed by the fruit skins. Monoclinic cryst. with faint pleasant odour. Mp 71°. Bp 254-255° Bp_{22} 145° $Bp_{0.2}$ 70-78°. Planar in the cryst. state at -233°, dihedral angle 10° in cryst. state >-233°, 25° in molten state, 32° in soln., 42° in gas phase.

▶ Fl. p. 113°, autoignition temp. 540°. Eye and mucous membrane irritant. Prolonged or repeated skin contact may cause sensitisation and dermatitis. Occup. exposure causes changes to central and peripheral nervous systems, and gastrointestinal disturbances. LD_{50} (rat, orl) 3280 mg/kg. OES: long-term 0.2 ppm; short-term 0.6 ppm. DU8050000

2,7,10-Bisabolatriene B-108

[17627-44-0]
4-(1,5-Dimethyl-1,4-hexadienyl)-1-methylcyclohexene, 9CI. ***α-Bisabolene***†. *α-Limene. FEMA 3331*

(*R,E*)-form

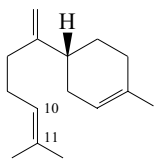
$C_{15}H_{24}$ 204.355
Not the same as 2,6,10-Bisabolatriene, B-107 which has been renamed (formerly α-Bisabolene). The FEMA number refers to mixed bisabolenes including 2,7(14),10-Bisabolatriene, B-109 and 2,6,10-Bisabolatriene B-107. Flavouring ingredient isol. from bisabol myrrh and other natural sources, e.g. lemon, bergamot.

(R,E)-form [70286-31-6]
Oil. $[\alpha]_D^{20}$ +54.3 (c, 1 in EtOH).

(R,Z)-form [70286-33-8]
Oil. $[\alpha]_D^{20}$ -12 (c, 1 in EtOH).

(S,E)-form [70286-32-7]
Oil. $[\alpha]_D^{20}$ -38.9 (c, 1 in EtOH).

(S,Z)-form [58845-44-6]
Constit. of oil of Opoponax. Oil. Bp_{12} 155-157°. $[\alpha]_D^{20}$ +8 (c, 1 in EtOH).



(ξ,E)-form
Oil. Abs. config. not detd., no opt. rotn. given.

Blue copper proteins B-164

Type 1 Copper proteins

$[CuN_2S_2]$

A group of metalloproteins which have a single Cu atom at the active site and three characteristic props.: intense blue colour at *ca*. 600 nm, unusually narrow hyperfine coupling in the ESR spectrum of the $Cu^{2\oplus}$ protein, and high reduction potentials (range 184-680 mV).

Amicyanin
Contains 106 amino acids.

Azurin
Contains 128 or 129 amino acids.

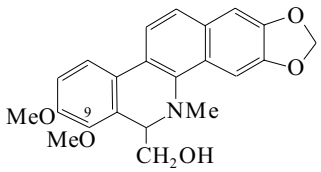
Cucumber basic protein
Plantacyanin. CBP
Contains 96 amino acids. Isol. from cucumber.

Plastocyanin
There are a number of Plastocyanins, each containing between 97 and 104 amino acids.

Pseudoazurin
Contains 123 amino acids.

Rusticyanin
Contains 144 amino acids.

Stellacyanin
Contains 107 amino acids.



Umecyanin
Contains 125 amino acids. Isol. from roots of horseradish.

Borax, 11CI, 10CI, 9CI, 8CI B-167

[1303-96-4]

[13840-56-7]

Tincal. Disodium tetraborate decahydrate. Borax decahydrate. Sodium borate, JAN, USAN

$B_4H_{20}Na_2O_{17}$ 381.371

The most important commercial borate. Also formulated as $Na_2O.2B_2O_3.10H_2O$. Listed in the EAFUS Food Additive Database (Jan. 2001) but with no current reported use. Historically used as a food preservative since ca. 1800, common in butter/margarine. Now limited to preservation of caviar. Colourless monoclinic cryst. Sol. H_2O (2 g per 100 cm^3 at 0°, 170 g per 100 cm^3 at 100°) MeOH, polyols; spar. sol. Me_2CO, EtOAc, EtOH. Stable in aq. soln. up to 61° then dehydrates to Disodium tetraborate pentahydrate - complex dehydration reactions depend somewhat on sample's history.

Brochocin C B-189

[150260-36-9]
Struct. unknown. Bacteriocin prod. by *Brochothrix campestris*.

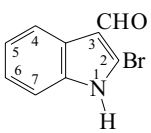
Siragusa, G.R. *et al., Appl. Environ. Microbiol.*, 1993, **59**, 2326 (*isol*)

Bromelains, BAN, INN, JAN, USAN B-190

[9001-00-7]

[37189-34-7]
Ananase. Bromelase. Extranase. Inflamen. Traumanase. E.C. 3.4.22.32 (stem brome-

lain). E.C. 3.4.22.33 (fruit bromelain)



Enzymes with broad specificity for hydrolysis of peptide bonds; stem bromelain is basic, fruit bromelain is acidic. Enzymes occurring in pineapple juice (*Ananas sativus*); used in tenderising meat and chill-proofing beer. Formerly E.C. 3.4.22.4.

▶ LD_{50} (rat, orl) >10000 mg/kg. LD_{50} (rat, ipr) 85.2 mg/kg. Hypersensitivity reactions reported when used therapeutically and from occup. exposure. Adverse gastrointestinal effects. EF8575000

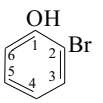
Bromomethane, 9CI B-193

[74-83-9]
Methyl bromide, BSI, ISO, JMAF. R 40B1. Dow Fume MC2. Halon 1001. Terabol. Curafume
H_3CBr
CH_3Br 94.939
Principally used as an insecticidal and nemacidal fumigant, esp. for soil and agricultural produce. Also used as a solvent for extraction of plant oils. Gas with faint chloroform-like odour. Spar. sol. H_2O. Mp -93.7°. Bp 4.5° (3.6°). Forms a hydrate at 0-5°. The signatory countries to the 1995 Montreal Treaty have agreed to phase out the industrial use of methyl bromide by 2010, in the USA its use will be banned after 1st January 2005.



▶ Autoignition temp. 535/537°. Vapour can ignite or explode if strongly heated. Eye irritant and vesicant which can penetrate rubber protection equipment. One of the most toxic organic halides, whose effects are cumulative and may be delayed after exposure. Organs affected after inhalation or percutaneous absorption include nervous system, kidneys and lung. Acute or chronic exposure can be fatal. Exp. carcinogen. OES: long-term 5 ppm; short-term 15 ppm (Sk). PA4900000

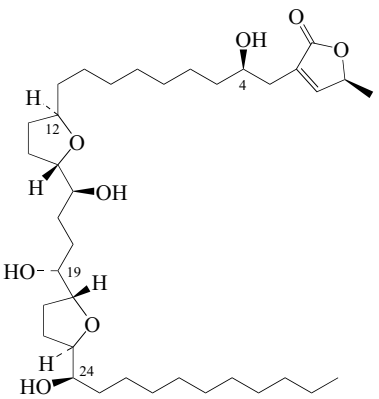
Bullatalicinone B-204

[137043-93-7]

[157966-80-8]
Isocherimolin 1

$C_{37}H_{66}O_8$ 638.924
Isocherimolin 1 is an artifact. Mp 125-126°. $[\alpha]_D$ +27 (c, 0.1 in MeOH). Both 2,4-*cis*- and *trans*- isomers isol. λ_{max} 201 (ϵ 6920) (MeOH) (Berdy). λ_{max} 201 (ϵ 714) (EtOH) (Berdy).

23-Epimer: ***20,23*-cis-*Bullatalicinone***
$C_{37}H_{66}O_8$ 638.924
Constit. of unripe fruit of *Rollinia mucosa* (biriba). Amorph. powder. Mp 95-96°. Isol. as a mixt. of 2,4-*cis* and *trans*-isomers to which data refers λ_{max} 202 (log ϵ 3.54) (MeOH).



24-Epimer:

[147732-21-6] ***Bullatanocinone***
$C_{37}H_{66}O_8$ 638.924
$[\alpha]_D$ +21.5 (c, 0.2 in $CHCl_3$). 2,4-*cis*- and *trans*- isomers present and have been separated by hplc.

Bullatanocin B-205

[150134-21-7, 151637-38-6, 157184-02-6, 159249-82-8]
Annonin IV. Cherimolin 2. Crassiflorin. Purpureacin 1. Squamostatin C

$C_{37}H_{66}O_8$ 638.924
Constit. of *Annona squamosa* (sugar apple), *Annona cherimolia* (cherimoya), *Annona glabra* (pond apple) and *Annona purpurea* (soncoya). Amorph. wax. Mp 107-109° (95-97°). $[\alpha]_D^{25}$ +13.6 (c, 0.28 in CH_2Cl_2). There are still doubts about the stereochemical identity of Purpureacin 1 with Bullatanocin λ_{max} 215 (ϵ 5000) (EtOH) (Derep).

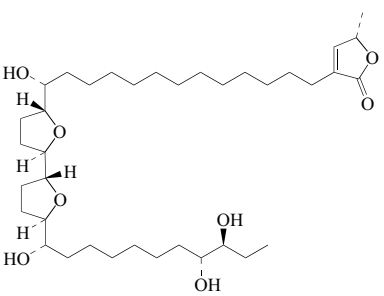
4-Deoxy: [158515-34-5] ***Squamostatin E. 4-Desoxycherimolin 2***
$C_{37}H_{66}O_7$ 622.924
Constit. of *Annona glabra* (pond apple) and *Annona squamosa* (sugar apple). Mp 105-106°. $[\alpha]_D$ +14.7 (c, 0.5 in MeOH).

12-Epimer: [165172-08-7] ***12,15*-cis-*Bullatanocin***
$C_{37}H_{66}O_8$ 638.924

24-Epimer: [152323-84-7] ***Bullatalicin. Annonin VIII. Cherimolin 1. Squamostatin B***†
$C_{37}H_{66}O_8$ 638.924
Constit. of *Annona squamosa* (sugar apple) and *Annona cherimolia* (cherimoya). Amorph. wax. Mp 120-121° (113-116°). $[\alpha]_D$ +64 (c, 0.3 in MeOH). $[\alpha]_D^{25}$ +9.8 (c, 0.29 in CH_2Cl_2). λ_{max} 215 (ϵ 5000) (EtOH) (Derep).

24-Epimer, 4-deoxy: [157184-03-7] ***Squamostatin D***
$C_{37}H_{66}O_7$ 622.924
Constit. of *Annona squamosa* (sugar apple). Mp 112-113.5°. $[\alpha]_D$ +7.9 (c, 0.5 in MeOH).

12,24-Diepimer: [165172-07-6] ***12,15*-cis-*Bullatalicin***
$C_{37}H_{66}O_8$ 638.924
Cryst. (MeCN).



*12,24-Diepimer, 4-deoxy:****12,15*-cis-*Squamostatin D***
$C_{37}H_{66}O_7$ 622.924
Constit. of the seeds of *Annona atemoya* (custard apple). Oil. $[\alpha]_D^{24}$ +19.9 (c, 0.62 in $CHCl_3$).

Thiobutyric acid

$H_3CCH_2CH_2COSH \Leftrightarrow H_3CCH_2CH_2CSOH$

C_4H_8OS 104.173

Bp 130° (118-119°).

***OH*-form**

O-*Me ester:* [52726-01-9]
$C_5H_{10}OS$ 118.199
Bp 134°. n_D^{20} 1.4640.

Anilide:
$C_{10}H_{13}NS$ 179.285
Needles (AcOH aq.). Mp 32-33°.

***SH*-form**

S-*Me ester:* [2432-51-1] S-*Methyl butanethioate. FEMA 3310*
$C_5H_{10}OS$ 118.199
Flavouring agent. Liq. with a putrid-rancid odour similar to sour cabbage. Bp_{757} 142-142.5°. n_D^{25} 1.4595.

S-*Ph ester:* [18245-73-3]
$C_{10}H_{12}OS$ 180.27
Yellow cryst. Bp_{20} 210-212°. Steam-volatile.

1-Butanethiol B-216

[109-79-5]
Butyl mercaptan. Butyl thioalcohol. 1-Mercaptobutane. FEMA 3478

$H_3CCH_2CH_2CH_2SH$

$C_4H_{10}S$ 90.189

Flavouring agent. Present in beef, Cheshire cheese, raw chicken and cooked potatoes. Unpleasant smelling liq. d_4^{25} 0.84. Fp -119. Bp 98-100°. n_D^{25} 1.4403.

▶ Highly flammable, fl. p. 2°. Reacts violently with HNO_3. Eye, skin and respiratory tract irritant. Exp. can cause gastrointestinal disturbances and headache. LD_{50} (rat, orl) 1500 mg/kg. EK6300000

Benzoyl:
$C_{11}H_{14}OS$ 194.297
Liq. Bp_{23} 160°.

S-*Me:* See 1-(Methylthio)butane in *The Combined Chemical Dictionary.*

S-*Ph:* [1126-80-3] *1-(Phenylthio)butane. Butyl phenyl sulfide*
$C_{10}H_{14}S$ 166.287
Liq. d_4^{20} 0.99. Bp_{12} 137-139° Bp_4 94.5-97°. n_D^{20} 1.5463.

Butanoic acid, 9CI B-218

[107-92-6]
Butyric acid. FEMA 2221

$H_3CCH_2CH_2COOH$

$C_4H_8O_2$ 88.106

Found in fresh and cooked apples, banana, sour cherry, papaya, strawberries, wheat bread, cheeses, butter and coffee. Flavouring agent. Liq. with pungent odour. Misc. H_2O, EtOH, Et_2O. d_4^{20} 0.96. Fp -19 Mp -8°. Bp 163.5°. pK_a 4.82 (25°). n_D^{20} 1.3991. Steam-volatile. Vp 0.84 mmHg (20°).

▶ Corrosive and irritating to skin and eyes. LD_{50} (rat, orl) 2940 mg/kg. ES5425000

Me ester: [623-42-7] *Methyl butyrate. FEMA 2693*
$C_5H_{10}O_2$ 102.133
Found in many fruits, e.g. apple juice, apricot, blackberry, nectarine etc., also present in cheeses, butter, milk, white wine, coffee and black tea. Flavouring ingredient. Liq. with apple-like odour and sweet taste. Sl. sol. H_2O, CCl_4; misc. EtOH, Et_2O. d_4^0 0.92. Mp -95°. Bp 102.3°. n_D^{20} 1.3878. Vp 32 mmHg (25°).

▶ Highly flammable, fl. p. 14°. Skin irritant. LD_{50} (rbt, orl) 3380 mg/kg. ET5500000

Et ester: [105-54-4] *Ethyl butyrate. FEMA 2427*
$C_6H_{12}O_2$ 116.16
Present in many fruits e.g. apple, apricot, banana, plum, tangerine etc. Flavouring ingredient. Liq. with pineapple odour. Sl. sol. H_2O, CCl_4; sol. EtOH, Et_2O. d_4^0 0.9. Fp -93.3. Bp 119.9°. n_D^{20} 1.4000. Vp 15 mmHg (25°).

▶ Flammable. Skin irritant. LD_{50} (rat, orl) 13000 mg/kg. ET1660000

Propyl ester: [105-66-8] *Propyl butyrate. FEMA 2934*
$C_7H_{14}O_2$ 130.186
Present in many fruits, e.g. apple, apricot, banana, melon, papaya etc., also present in Camembert and other cheeses. Flavouring ingredient. Liq. Sl. sol. H_2O; misc. EtOH, Et_2O. d_4^{20} 0.87. Mp -95.2°. Bp_{764} 142-143° Bp_{14} 39°. n_D^{20} 1.4001. Vp 4.5 mmHg (25°).

▶ Flammable, fl. p. 37/40°. ET6200000

Isopropyl ester: [638-11-9] *Isopropyl butyrate. FEMA 2935*
$C_7H_{14}O_2$ 130.186
Present in apricot, kumquat peel oil, American cranberry, papaya, strawberry, spineless monkey orange and sparkling wine. Flavouring ingredient. Liq. Insol. H_2O; sol. EtOH. d_4^{20} 0.86. Bp 129°. n_D^{20} 1.3936. Vp 16 mmHg (25°).

▶ Flammable, fl. p. 24°.

2-Propenyl ester: [2051-78-7] *Allyl butyrate. FEMA 2021*
$C_7H_{12}O_2$ 128.171
Fruit flavouring ingredient. Insol. H_2O; misc. EtOH, Et_2O. d^{20} 0.9. Bp 142° Bp_{15} 44-45°. n_D^{20} 1.4158.

▶ ES5775000

Butyl ester: [109-21-7] *Butyl butyrate. FEMA 2186*
$C_8H_{16}O_2$ 144.213
Present in many fruits, e.g. banana, cherry, melon, plum, also present in

gruyere de comte cheese, cider, soybean etc. Used in fruit flavour compositions. Liq. Insol. H_2O; misc. EtOH, Et_2O. d_4^{20} 0.87. Mp -91.5°. Bp 164.8° Bp_{11} 56-57°. n_D^{20} 1.4075.

▶ Flammable, fl. p. 51/50°. ES8120000

Benzyl ester: [103-37-7] *Phenylmethyl butanoate. Benzyl butyrate. FEMA 2140*
$C_{11}H_{14}O_2$ 178.23
Present in purple and yellow passion fruit, mountain papaya, cherimoya, black tea, Bourbon vanilla and hog plum. Flavouring agent. Oil with apricot-like odour and sweet, pear-like taste. d_4^{20} 1. Bp 238-239° Bp_9 108-110° Bp_3 91-92°. n_D^{20} 1.4930.

2-Butenal B-222

[4170-30-3]
Crotonaldehyde

$H_3CCH{=}CHCHO$

C_4H_6O 70.091Coml. crotonaldehyde is a mixture of (*E*)- and (*Z*)-forms, with the (*E*)-form predominating (>95%); contains hydroquinone as a polym. inhibitor. Undergoes anionic polym. Q/e values for copolym., Q 0.023, e 0.84. Forms phenolic resins by polycondensation with phenols.

► Eye, skin and mucous membrane irritant. Lachrymator and can also cause corneal burns. Exp. carcinogen. LD_{50} (rat, orl) 206 mg/kg. GP9499000

(E)-form [123-73-9]
Isol. from vegetable sources, e.g. tomato juice, strawberry aroma. Lachrymatory liq. Sol. H_2O; v. sol. EtOH, Et_2O, Me_2CO. d_{20}^{20} 0.85. Mp -69°. Bp 102.2° (104°). n_D^{17} 1.4384. Vp 37 mmHg (25°).

► Highly flammable, fl. p. 13°, autoignition temp. 207/230°. Explosive reaction with butadiene. Eye, skin and respiratory tract irritant. Lachrymator. Contact with eyes can also cause corneal burns. LD_{50} (rat, orl) 300 mg/kg. ACGIH TLV: long-term 2 ppm. GP9625000

Butter acids B-232

[85536-25-0]
FEMA 2171

A mixt. of fatty acids isol. from butter, or an equivalent mixt. of the acids from other sources, comprising oleic/palmitic (50-70%), stearic/myristic acids (ca. 20%), butyric acid (3-4%), linoleic, lauric, caproic, capric and caprylic acids (< 1% each). Flavouring ingredient for baked goods, ice cream, puddings, imitation dairy products, nonalcoholic beverages and candies. Waxy solid.

Et ester: Butter esters. FEMA 2172
Produced by esterification of mixed butter acids with EtOH. Flavouring ingredient for baked goods, fats, oils, ice cream, puddings, imitation dairy products and other foodstuffs. Waxy solid.

Fenaroli's Handbook of Flavor Ingredients, 4th edn., (ed. Burdock, G.A.), CRC Press, 2001, 181-182 (*use, esters*)

Byakangelicin B-264

[19573-01-4]
*9-(2,3-Dihydroxy-2-methylbutoxy)-4-methoxy-7*H*-furo[3,2-*g*][1]benzopyran-7-one, 9CI. Biacangelicin*

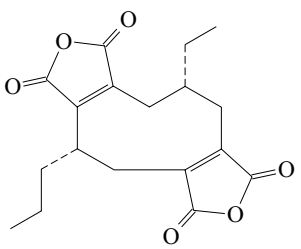
(*R*)-*form*

$C_{17}H_{18}O_7$ 334.325Log P 1.34 (calc).
λ_{max} 219 ; 239 ; 246 ; 270 ; 312 (MeOH) (Berdy).

(R)-form [482-25-7]
Constit. of Japanese drug byakusi obt. from *Angelica* spp. Also from lemon oil and other *Citrus* spp.. Pale yellow needles (EtOH). Mp 117-118°. $[\alpha]_D^{25}$ +24.6 (Py). Pharmacol. active isomer.
► Exp. reprod. effects (inhibits action of placental gonadotrophins). LV1049000

2′-O-β-D-Glucopyranoside:
$C_{23}H_{28}O_{12}$ 496.467
Constit. of angelica *Angelica archangelica* root. Cryst. Mp 111-114°. $[\alpha]_D^{25}$ -15 (c, 0.1 in MeOH).

3′-O-β-D-Glucopyranoside:
$C_{23}H_{28}O_{12}$ 496.467
Constit. of angelica root. Cryst. Mp 170-173°. $[\alpha]_D^{25}$ -8 (c, 0.1 in H_2O).



2′-O-(3-Methylbutanoyl):
$C_{22}H_{26}O_8$ 418.443
Constit. of angelica (*Angelica archangelica*) root. Gum. No opt. rotn. or config..

(S)-form
Constit. of common rue (*Ruta graveolens*). Cryst. Mp 124-126°. $[\alpha]_D^{22}$ -19 (MeOH).

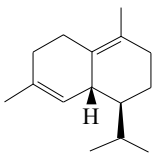
1(10),3-Cadinadiene C-2

[29350-73-0]
ω-Cadinene

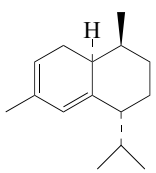


$C_{15}H_{24}$ 204.355
Constit. of *Mentha piperita*. Oil. $Bp_{4.5}$ 115-128°. $[\alpha]_D^{20}$ +92. Originally named δ-Cadinene, which led to confusion with 1(10),4-Cadinadiene, C-3.

Connell, D.W. *et al., Tet. Lett.*, 1968, 519
Bülow, N. *et al., Phytochemistry*, 2000, **55**, 141-168 (*pmr, bibl*)

1(10),4-Cadinadiene C-3

[29350-73-0]
δ-Cadinene



$C_{15}H_{24}$ 204.355
(+)-*form* [483-76-1]
Constit. of the essential oils of ylang-ylang, citronella, cubebs, and sweetflag. Oil. Bp_{10} 133-134°.

Bisepoxide:
Cryst. Mp 86-87°. $[\alpha]_D$ +23 (c, 6.7 in $CHCl_3$).

(±)-*form* *Dysoxylonene*
Bp_{10} 133°.

Herout, V. *et al., Coll. Czech. Chem. Comm.*, 1954, **19**, 118 (*struct*)

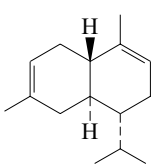
3,5-Cadinadiene C-4

(+)-*form*

$C_{15}H_{24}$ 204.355
(+)-*form* [189165-77-3]
Oil.



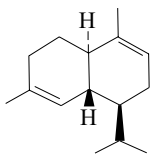
(-)-*form*
Constit. of *Leptospermum scoparium* (red tea). Oil. $[\alpha]_D$ -216.8 (c, 0.14 in $CDCl_3$).

Melching, S. *et al., Phytochemistry*, 1997, **44**, 1291-1296 (*isol, pmr*)

3,9-Cadinadiene C-5

[523-47-7]

[29350-73-0]
β-Cadinene



$C_{15}H_{24}$ 204.355
Constit. of *Pinus caribaea*. Mixed cadinene isomers, with β-cadinene usually predominating, occur in several essential oils, esp. ylang-ylang, citronella and cade oil from *Juniper* spp. Cadinene isomers are used as a flavouring agent and/or flavour modifier. Oil.

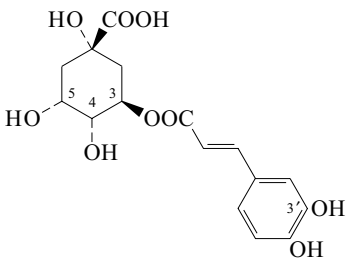
1-*O*-Caffeoylquinic acid C-19

[1241-87-8]
1-(3,4-Dihydroxycinnamoyl)quinic acid



$C_{16}H_{18}O_9$ 354.313
Constit. of coffee. Noncryst. $[\alpha]_D^{15}$ -8.3 (c, 3 in H_2O).

Anhydride:
Cryst. Mp 205-208°. $[\alpha]_D^{25}$ -17 (c, 2 in EtOH).

Scarpati, M.L. *et al., Ann. Chim. (Rome)*, 1958, **48**, 997 (*isol*)

3-*O*-Caffeoylquinic acid C-20

[327-97-9]
3-(3,4-Dihydroxycinnamoyl)quinic acid. ***Chlorogenic acid****. Caffeylquinic acid. Caffetannic acid. Helianthic acid*

$C_{16}H_{18}O_9$ 354.313
λ_{max} 296 ; 325 (EtOH) (Berdy).
▶ GU8480000
(E)-form
Isol. from Liberian coffee. Nutriceutical with antioxidant props.. Needles + ½ H_2O. Mp 208°. $[\alpha]_D$ -35.2 (H_2O).

Butyl ester: [132741-56-1]
$C_{20}H_{26}O_9$ 410.42
Constit. of *Spondias mombin* (yellow mombin).

1-Me ether: ***3-O-Caffeoyl-1-O-methylquinic acid***
$C_{17}H_{20}O_9$ 368.34
Constit. of *Phyllostachys edulis* (moso bamboo). Powder. Mp 202-203°. $[\alpha]_D^{25}$ -16.9 (c, 0.35 in H_2O). λ_{max} 245 (sh) ; 300 ; 329 (MeOH).

3′-Me ether: [62929-69-5] ***3-O-Feruloylquinic acid***
$C_{17}H_{20}O_9$ 368.34
Constit. of coffee beans. Also from tomato (*Lycopersicon esculentum*) and sunflower (*Helianthus annuus*). Mp 196-197°. $[\alpha]_D^{28}$ -42.8 (EtOH). λ_{max} 325 (ε 19200) (EtOH) (Berdy).

4-Me ether: ***3-O-Caffeoyl-4-O-methylquinic acid***
$C_{17}H_{20}O_9$ 368.34
Constit. of *Phyllostachys edulis* (moso

bamboo). Powder. Mp 200-201°. $[\alpha]_D^{25}$ -47.2 (c, 0.2 in EtOH). Misnamed in ref. λ_{max} 244 (sh) ; 296 ; 328 (MeOH).

3′,4′-Quinone: [24321-18-4] ***Chlorogenoquinone***
$C_{16}H_{16}O_9$ 352.297
Forms coloured adducts with amino acids and peptides, implicated in food discolouration. No phys. props. reported.

3-Epimer: ***3*-O-*Caffeoyl*-muco-*quinic acid***
$C_{16}H_{18}O_9$ 354.313
Constit. of *Asimina triloba* (pawpaw). Powder. λ_{max} 225 ; 325 (MeOH).

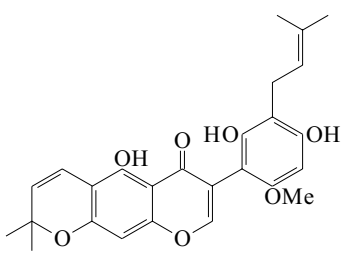
Cajaflavanone C-26

Erythrisenegalone

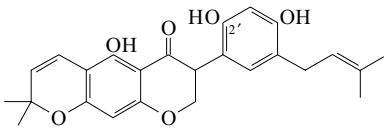


$C_{25}H_{26}O_5$ 406.477
(*S*)-*form* [68236-12-4]
Constit. of *Cajanus cajan* (pigeon pea). Straw-coloured cryst. Mp 129-130° (122-124°). $[\alpha]_D$ -66.6 (c, 1 in $CHCl_3$). $[\alpha]_D$ -5 (c, 1 in $CHCl_3$).
(±)-*form* [68682-03-1]
Light yellow cryst. (C_6H_6/petrol). Mp 138-140°.

Bhanumati, S. *et al., Phytochemistry*, 1978, **17**, 2045 (*isol*)
Jain, A.C. *et al., Tetrahedron*, 1978, **34**, 2607 (*synth*)
Nagar, A. *et al., Tet. Lett.*, 1978, 2031 (*synth*)
Fomum, Z.T. *et al., Phytochemistry*, 1985, **24**, 3075 (*isol*)

Cajaisoflavone C-27

[72578-99-5]
7-[2,4-Dihydroxy-6-methoxy-3-(3-methyl-2-butenyl)phenyl]-5-hydroxy-2,2-dimethyl-2H,6H-benzo[1,2-b:5,4-b′]dipyran-6-one, 9CI



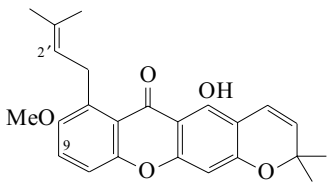
$C_{26}H_{26}O_7$ 450.487
Isol. from root bark of *Cajanus cajan* (pigeon pea). Orange semisolid.

Bhanumati, S. *et al., Phytochemistry*, 1979, **18**, 1254 (*isol, pmr, ms*)

Cajanone C-28

[63006-48-4]
7-[2,4-Dihydroxy-5-(3-methyl-2-butenyl)-

*phenyl]-7,8-dihydro-5-hydroxy-2,2-dimethyl-2*H,*6*H-*benzo[1,2-*b*:5,4-*b′]*dipyran-6-one, 9CI*



$C_{25}H_{26}O_6$ 422.477
Constit. of *Cajanus cajan* (pigeon pea). Log P 4.93 (uncertain value) (calc). λ_{max} 273 (ϵ 20000); 293 (ϵ 11200) (EtOH) (Berdy).

2′-Me ether: [71765-79-2] ***2′-O-Methylcajanone***
$C_{26}H_{28}O_6$ 436.504
Isol. from root bark of *Cajanus cajan* (pigeon pea). Yellow cryst. solid (EtOAc/petrol). Mp 85°. Opt. inactive.

Preston, N.W. *et al., Phytochemistry*, 1977, **16**, 143 (*isol, uv, pmr, struct*)
Bhanumati, S. *et al., Phytochemistry*, 1979, **18**, 693 (*deriv*)

Calabaxanthone C-29

[39011-96-6]
*5-Hydroxy-8-methoxy-2,2-dimethyl-7-(3-methyl-2-butenyl)-*2H,*6*H-*pyrano[3,2-*b*]*xanthen-6-one, 9CI*

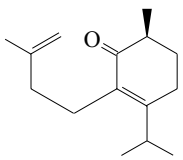
$C_{24}H_{24}O_5$ 392.451
CAS numbering shown. Constit. of *Garcinia mangostana* (mangosteen). Yellow cryst. (EtOH). Mp 172°.

Ac:
Cryst. (MeOH). Mp 147-148°.

Me ether:
Cryst. (Me_2CO). Mp 116-119°.

O-*De-Me:* [106897-03-4] ***Demethylcalabaxanthone***
$C_{23}H_{22}O_5$ 378.424
Constit. of *Garcinia mangostana* (mangosteen). Yellow needles. Mp 85°.

9-Hydroxy: [35349-68-9] ***9-Hydroxycalabaxanthone***
$C_{24}H_{24}O_6$ 408.45
Constit. of *Garcinia mangostana* (mangosteen). Bright yellow cryst. (C_6H_6). Mp 156-156° (152-154°).



3,4-Dihydro, 9-hydroxy: [19275-46-8] ***3-Isomangostin***
$C_{24}H_{26}O_6$ 410.466
Constit. of *Garcinia mangostana* (mangosteen). Cryst. (C_6H_6). Mp 155-160° (154-155°). λ_{max} 243 (ϵ 39800); 257 (ϵ 34670); 319 (ϵ 30200); 355 (ϵ 13180) (EtOH) (Berdy).

3,4-Dihydro, 3,9-dihydroxy: [184587-72-2] ***Mangostanol***
$C_{24}H_{26}O_7$ 426.465
Constit. of *Garcinia mangostana* (mangosteen). Fine yellow powder (CH_2Cl_2/MeOH). $[\alpha]_D^{28}$ +16.3 (c, 1 in MeOH). λ_{max} 208 (log ϵ 4.39); 242 (log ϵ 4.44); 306 (log ϵ 4.25); 333 (log ϵ 3.94) (MeOH).

2′,3,3′,4-Tetrahydro, 3′,9-dihydroxy: [26063-96-7] ***3-Isomangostin hydrate***
$C_{24}H_{28}O_7$ 428.481
Constit. of *Garcinia mangostana* (mangosteen). Cryst. (CH_2Cl_2). Mp 182-183°.

Somanathan, R. *et al., J.C.S. Perkin 1*, 1972, 1935 (*struct*)

Calamin C-35

[74751-40-9]

$C_{27}H_{36}O_{10}$ 520.575

Constit. of calamondin seeds (*Citrus reticulata*). Cryst. (MeOH). Mp 162-165°.

Bennett, R.D. *et al., Tetrahedron*, 1981, **37**, 17

Calcium acetate C-36

[62-54-4]

Acetic acid, calcium salt, 8CI. Ethanoic acid, calcium salt. E263

$Ca(OAc)_2$

$C_4H_6CaO_4$ 158.167

Used in foods as a firming agent, acidity regulator, sequestrant, stabiliser and thickener, and nutrient supplement (Ca source). Used as an acidifier/preservative in bread, and in some gelling mixtures. Hygroscopic white powder. V. sol. H_2O (37 g per 100 cm^3 at 0°; 30 g per 100 cm^3 at 100°); spar. sol. EtOH. ΔH_f° -1479 kJ mol^{-1}. Hygroscopic. Dec. on heating to form CaO.

▶ AF7525000

Monohydrate: [5743-26-0]

$C_4H_8CaO_5$ 176.182

Colourless cryst. Dec. on heating → CaO. V. sol. (44 g per 100 cm^3 at 0°; 34 g per 100 cm^3 at 100°); spar. sol. EtOH. ΔH_f° -1772 kJ mol^{-1}.

▶ AF7875000

Dihydrate:

$C_4H_{10}CaO_6$ 194.197

Colourless cryst. Dec. on heating with H_2O loss (-H_2O at 84°) and ultimate formation of CaO. V. sol. H_2O (35 g per 100 cm^3 at 20°; 34 g per 100 cm^3 at 80°); spar. sol. EtOH.

Calcium chloride ($CaCl_2$), 8CI C-39

[10043-52-4]

Calcium chloride. Calcium dichloride. E509

$CaCl_2$

$CaCl_2$ 110.983

Orthorhombic. Essentially a distorted rutile-type struct.. Used as a postharvest dip to reduce decay in apples and berries. Added to food as an anticaking agent, curing or pickling agent, firming agent, flavour enhancer, antimrobial, humectant, nutrient supplement, pH control agent, processing aid, stabiliser and thickener, surface active agent, synergist or texturiser. Deliquescent colourless, cubic cryst. V. sol. H_2O (74.5 g per 100 cm^3 at 20°; 159 g per 100 cm^3 at 100°); sol. EtOH, Me_2CO, AcOH. Mp 782°. Bp 1600°. ΔH_f° -796 kJ mol^{-1}. ΔG_f° -748 kJ mol^{-1}. S° 105 J K^{-1} mol^{-1}.

▶ Irritant. EV9800000

Mineral-*form*

Hydrophilite

May be identical to Antarctite or Sinjarite.

Monohydrate: [13477-29-7]

$CaCl_2H_2O$ 128.999

Colourless deliquescent cryst. Dec. on heating with loss of H_2O. V. sol. H_2O (77 g per 100 cm^3 at 0°; 249 g per 100 cm^3 at 100°); sol. EtOH; insol. Me_2CO. ΔH_f° -1109 kJ mol^{-1}; ΔG_f° -1101 kJ mol^{-1}.

▶ Irritant.

Dihydrate: [10035-04-8] ***Sinjarite***

$CaCl_2H_4O_2$ 147.014

Hygroscopic colourless cryst. Dec. on heating with loss of H_2O. V. sol. H_2O (98 g per 100 cm^3 at 0°; 326 g per 100 cm^3 at 60°). V. sol. EtOH (50 g per 100 cm^3 at 80°). ΔH_f° -1403 kJ mol^{-1}.

▶ Irritant. EV9810000

Tetrahydrate: [25094-02-4]

$CaCl_2H_8O_4$ 183.044

Colourless triclinic cryst. Dec. on heating with loss of H_2O. ΔH_f° -2010 kJ mol^{-1}; ΔG_f° -1724 kJ mol^{-1}; S° 213 J K^{-1} mol^{-1}. Struct. comprises $[CaCl_2.4H_2O]_2$ units held together by H-bonds.

▶ Irritant.

Calcium diphosphate ($Ca_2P_2O_7$) C-40

[7790-76-3]

[10086-45-0]

Calcium diphosphate. Calcium pyrophosphate ($Ca_2P_2O_7$). Dicalcium pyrophosphate

$Ca_2P_2O_7$

$Ca_2O_7P_2$ 254.099

The dicalcium salt of Diphosphoric acid. Trimorphic, with low temp. (γ, β) and high temp. (α) forms, each metastable at r.t.. Used in foods as a nutrient supplement and pH control agent.

Dihydrate: [17031-92-4]
Cryst. V. insol. H_2O. Triclinic: both Ca atoms are heptacoordinate. Monoclinic and orthorhombic forms also reported.

Tetrahydrate: [17031-93-5]
Colourless tablets. V. insol. H_2O. Monoclinic: both Ca atoms are heptacoordinate with two independent coord. polyhedra. V. nearly eclipsed anion conform..

α-*form*
Monoclinic. Both $Ca^{2\oplus}$ cations are octacoordinate. Anion is in eclipsed form with POP 130°, P–O(t) 151 pm, P–O(bridge) 160 pm.Mp 1352°.

β-*form*
Tetragonal with eclipsed anion conformation for each of two independent POP groups with POP 131°, 138°. Mean P–O(t) 151.8, P–O(bridge) 161.5 pm. Four crystallographically independent $Ca^{2\oplus}$ ions per unit cell having coordination numbers 7 (2 x), 8 (1 x), and 9 (1 x).Yields α-form at 1150-1200°.

γ-*form* At 750-900°, yields β-form.

Calcium hydrogen sulfite C-41

[13780-03-5]

Sulfurous acid calcium salt (2:1). Calcium bisulfite. E227

$Ca(HSO_3)_2$

$CaH_2O_6S_2$ 202.222

Obt. from a soln. of $CaSO_3$ in an aq. soln. of SO_2. Preservative.

Ger. Pat., 1935, 623 181; *CA*, **30**, 2332 (*manuf*)
Simon, A. *et al., Naturwissenschaften*, 1958, **45**, 128 (*Raman*)

Calcium hydroxide ($Ca(OH)_2$), 8CI, INN, USAN C-42

[1305-62-0]

Calcium hydrate. Hydrated lime. Lime water. Slaked lime. E526

$Ca(OH)_2$

CaH_2O_2 74.093

Has CdI_2 struct.. Used in foods as a buffer and firming agent. Colourless hexagonal cryst. Spar. sol. H_2O (0.185 g per 100 cm^3 at 0°; 0.077 g per 100 cm^3 at 100°); insol. EtOH. ΔH_f° -986 kJ mol^{-1}; ΔG_f° -898 kJ mol^{-1}; S° 83.4 J K^{-1} mol^{-1}. Dec. on heating with loss of H_2O. Dissolves in acids to form the corresp. calcium salt. Reacts with atmospheric CO_2 to form $CaCO_3$.

▶ OES: long-term 5 mg/m^3. Corrosive. Severe eye irritant. Respiratory and skin irritant. LD_{50} (rat, orl) 7340 mg/kg. EW2800000

Calcium iodate(*V*) ($Ca(IO_3)_2$) C-44

[7789-80-2]
Iodic acid calcium salt, 8CI. Calcium iodate. Lautarite

$Ca(IO_3)_2$

CaI_2O_6 389.883

Food additive used to enhance poultry and egg production. Oxidiser in bread manuf.. Colourless monoclinic cryst. Spar. sol. H_2O (0.20 g per 100 cm^3 at 15°, 0.67 g per 100 cm^3 at 90°); insol. EtOH. ΔH_f° -1003 kJ mol^{-1}; ΔG_f° -893 kJ mol^{-1}; S° 230 JK^{-1} mol^{-1}. Dec. on heating with loss of I_2 and O_2 forming $Ca_5(IO_6)_2$ at 540-680° and CaO at 700-840°.

►Oxidiser, irritant.

Mineral-*form*
Lautarite
Colourless, yellowish, short prismatic cryst.

Monohydrate: [10031-32-0]
Dec. on heating with H_2O loss. ΔH_f° -1293 kJ mol^{-1}.

Hexahydrate: [10031-33-1] *Hexaaquacalcium diiodate*
Colourless orthorhombic cryst.; dec. on heating with H_2O loss. Spar. sol. H_2O (0.13 g per 100 cm^3 at 0°, 1.2 g per 100 cm^3 at 100°). ΔH_f° -2781 kJ mol^{-1}; ΔG_f° -2268 kJ mol^{-1}; S° 452 J K^{-1} mol^{-1}.

Calcium metasilicate ($CaSiO_3$) C-45

[1344-95-2]

[10101-39-0]
Silicic acid calcium salt, 12CI. Calcium metasilicate. Calcium silicate ($CaSiO_3$). C.I. Pigment White 28

$CaSiO_3$

CaO_3Si 116.162

There are 3 normal modifications and a high-pressure modification. The terms α-$CaSiO_3$ and β-$CaSiO_3$ are used ambiguously in the lit. and should be avoided. A hydrous or anhydrous Ca silicate with varying proportions of CaO and SiO_2 is used as an anticaking agent in foodstuffs. Aldrich: 37266-8.

►VV9170000

Mineral-*form* [13983-17-0]
Wollastonite. *Wollastonite-1T. Wollastonite-Tc*
Triclinic low-temp. modification. A chain silicate. Polymorphic.White to greyish cryst. Undergoes a transition to pseudowollastonite above 1125°.

►ZC9750000

Mineral-*form* [14567-51-2]
Parawollastonite. *Wollastonite-2M*
A monoclinic form of wollastonite: related by a simple stacking modification.White or grey cryst.

Mineral-*form* [14567-52-3]
Pseudowollastonite. *Cyclowollastonite*
The high-temp. modification. A ring silicate. Polymorphic.Triclinic transparent colourless cryst. Mp 1544°.

Calcium oxide (CaO), 8CI C-46

[1305-78-8]
Calcium oxide. Calcium monoxide. Burnt lime. Calcia. Calx. Quicklime. Unslaked lime. E529

CaO

CaO 56.077

NaCl struct. type. Used in food as a pH control agent, nutrient supplement, dough conditioner, and texturising, firming and anticaking agent. Colourless cubic cryst. Mp 2927°. ΔH_f° -635.1 kJ mol^{-1}; ΔG_f° -603.5 kJ mol^{-1}; S° 38.2 J K^{-1} mol^{-1}. Moisture sensitive. Dissolves in $H_2O \rightarrow Ca(OH)_2$; dissolves in acids. Reacts with atmospheric H_2O to form $Ca(OH)_2$ which reacts further with CO_2 to form $CaCO_3$; crude samples of CaO often contain large quantities of $Ca(OH)_2$ and $CaCO_3$.

►Irritant. EW3100000

Calcium peroxide (CaO_2), 8CI C-48

[1305-79-9]

Calcium peroxide. Perme Ox. Trapzene

$Ca(O_2)$

CaO_2 72.077

CaC_2 struct. Not known in pure state. Coml. product contains up to 75% CaO_2, mixed with CaO, $Ca(OH)_2$, and $CaCO_3$. Flour additive; bleaching agent. White tetragonal cryst. Spar. sol. H_2O. ΔH_f° -653 kJ mol^{-1} (298K). Dissoc. on heating >400° → CaO + O_2; dissolves in H_2O → $Ca(OH)_2$ + H_2O_2 + O_2. Does not melt but dec. 7300°, >400° on heating.

▶ Oxidiser. EW3865000

Octahydrate: [60762-59-6] White cryst. (H_2O). ΔH_f° -3011 kJ mol^{-1} (298K). Thermal dehyd. yields anhyd. CaO_2.

Compd. with hydrogen peroxide (1:2): [12133-34-5]
CaH_4O_6 140.106
White cryst. Reacts. with CO_2 → $CaCO_3$ + H_2O + O_2; thermal dec. yields $Ca(O_2)_2$.

Calcium phosphate ($Ca(H_2PO_4)_2$) C-49

[7758-23-8]

[10103-46-5]

Calcium phosphate (1:2), 9CI, 8CI. Calcium phosphate†. Calcium bis(dihydrogen phosphate). Monocalcium phosphate

$Ca(H_2PO_4)_2$

$CaH_4O_8P_2$ 234.052

Added to flour as a nutrient source and leavening agent; stabiliser and thickener for fruit jellies, preserves and jams; also used in foods as pH control agent, firming agent, sequestrant and dietary supplement.

▶ TB8527000

Monohydrate: [10031-30-8] Large white shining plates (H_3PO_4). Triclinic. $CaPO_4$ sheets are held together by H_2PO_4 ions and H_2O molecules. Non-equivalent PO_4 groups. Ca ions are 8-coord. When heated, loses $0.5H_2O$ at 170°, and further $0.5H_2O$ at 280°. Structural H_2O lost at 320°, and 430°. Also loses H_2O on grinding.

▶ TB8530000

Tetrahydrate:

Calcium phosphate ($Ca(HPO_4)$) C-50

[7757-93-9]

[10103-46-5]

Calcium phosphate (1:1), 9CI, 8CI. Calcium phosphate. Calcium monohydrogen phosphate

$CaHPO_4$

$CaHO_4P$ 136.057

Triclinic lattice. Ca ions coordinated to 7 oxygens (pentagonal pyramid) or to 8 oxygens. Used in foods as a leavening agent, stabiliser and thickener, nutrient, pH control agent, masticatory substance, moisture control agent, emulsifier, and appearance control agent for colours and colour modifiers. White cryst. ΔH_f° -1821 kJ mol^{-1}; ΔG_f° -1680 kJ mol^{-1}; S° 88 J K^{-1} mol^{-1}.

Monohydrate: When shaken with H_2O, → dihydrate → $CaHPO_4$.

1.5-Hydrate: [33849-87-5] At 165° → anhydrous salt.

Dihydrate: [7789-77-7] White cryst. Only slowly sol. H_2O at < 100°. Mp 36°. Monoclinic lattice. Loses H_2O on grinding. ΔH_f° -2410 kJ mol^{-1}; ΔG_f° -2153 kJ mol^{-1}; S° 167 J K^{-1} mol^{-1}.

Mineral-*form* [21063-37-6]
Monetite
Essentially the anhyd. compd. Triclinic lattice.Pale yellowish white translucent cryst., usually flattened with rhombohedral outline.

Mineral-*form* [14567-92-1]
Brushite
Essentially the dihydrate. Monoclinic lattice.Colourless to pale yellow, transparent to translucent cryst., with vitreous lustre.

Calcium phosphate ($Ca_3(PO_4)_2$) C-51

[7758-87-4]

[10103-46-5]

Calcium phosphate (3:2), 9CI, 8CI. Calcium phosphate†. Calcium orthophosphate. Bone ash. Bone phosphate of lime. BPL. FEMA 3081

$Ca_3(PO_4)_2$

$Ca_3O_8P_2$ 310.177

There is controversy over the existence of a solid amorphous form. It may be a unique compd. which readily converts to hydroxyapatite or it may be a mixt. of hydroxyapatite and brushite or monetite. Component of flour bleaching mixtures, anticaking agent, dietary supplement, flavouring ingredient. Insol. H_2O (2×10^{-3} g per 100 cm^3 at 25°). ΔH_f° -4121 kJ mol^{-1}; ΔG_f° -3885 kJ mol^{-1}; S° 236 J K^{-1} mol^{-1}.

α-form

High temp.-form

Monoclinic lattice. Struct. consists of columns of cations, and columns of cations + anions with compensating cation vacancies.Mp 1720°. Stable between 1120-1470°.

β-form

Low-temp.-form

Rhombohedral lattice struct. similar to that of α-form except that no cation-cation columns here; a 'tighter' struct. than that of the α-form. Contains 5 distinct $Ca^{2\oplus}$ ions with coord. nos. 6, 7, 8, 8, and 9.Stable below 1120° but in the presence of traces of $M^{2\oplus}$ stabilised to *ca* 1350°. Exists until near r.t. in absence of moisture. Replacement of $Mg^{2\oplus}$ by $Ca^{2\oplus}$ hinders thermal conversion to α-form. Mp 1730°.

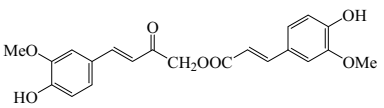
Calcium sulfite, 9CI C-55

[10257-55-3]

Sulfurous acid calcium salt. E226

$CaSO_3$

CaO_3S 120.142



Two modifications known. Preservative. Cryst.

Hemihydrate: [29501-28-8] Cryst. Exists in 3 modifications. Loses H_2O of cryst. at 300-380°.

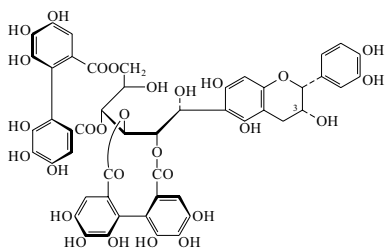
Camellianin D C-58



$C_{83}H_{62}O_{50}$ 1859.373

Exists as an equilibrated mixt. of α- and β-anomers. Tannin constit. of *Camellia japonica*.

Okuda, T. *et al., Heterocycles*, 1990, **30**, 1195 (*struct*)

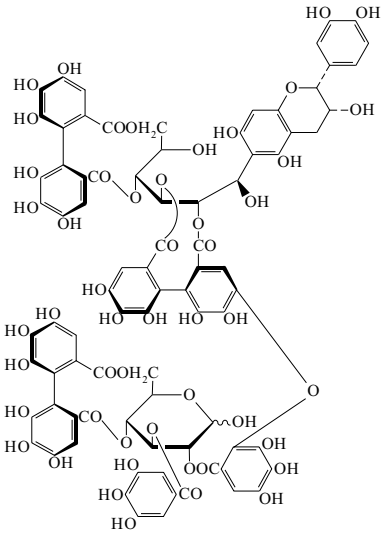
Camelliatannin C C-59

[154524-52-4]

$C_{49}H_{38}O_{28}$ 1074.822

Constit. of the leaves of *Camellia japonica*. Off-white powder + $7H_2O$. $[\alpha]_D$ +119 (c, 1.6 in MeOH). λ_{max} 207 (ϵ 95500); 230 (sh) (ϵ 61660) (MeOH).

3-Epimer: [172723-29-4] ***Stachyuranin B***



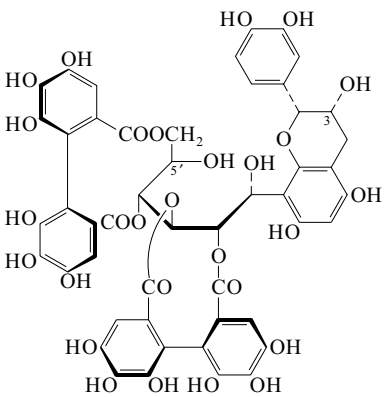
$C_{49}H_{38}O_{28}$ 1074.822

Off-white powder + $8H_2O$. $[\alpha]_D$ +120 (c, 1 in MeOH). λ_{max} 207 (ϵ 93320); 230 (sh) (ϵ 66070); 260 (sh) (ϵ 33880) (MeOH).

Hatano, T. *et al., Chem. Pharm. Bull.*, 1995, **43**, 1629; 2109 (*isol, pmr, cmr*)

Camelliatannin D C-60

[148159-87-9]



$C_{83}H_{62}O_{50}$ 1859.373

Constit. of the leaves of *Camellia japonica*. Off-white powder + $12H_2O$. $[\alpha]_D$ +46 (c, 0.9 in MeOH). λ_{max} 207 (ϵ 208930); 280 (sh) (ϵ 67610) (MeOH).

Hatano, T. *et al., Chem. Pharm. Bull.*, 1995, **43**, 2033 (*isol, struct*)

Camelliatannin E C-61

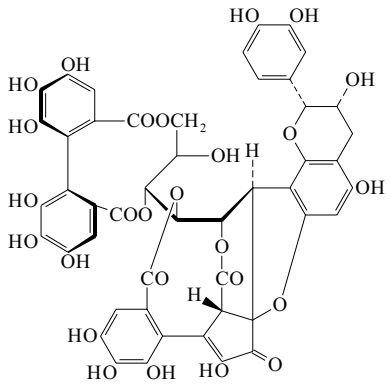
[148132-92-7]

$C_{49}H_{38}O_{28}$ 1074.822

Constit. of the leaves of *Camellia japonica*. Off-white powder + $6H_2O$. $[\alpha]_D$ +53 (c, 1 in MeOH). λ_{max} 208 (ϵ 97720); 231 (sh) (ϵ 67610); 260 (sh) (ϵ 35480) (MeOH).

*3-Epimer, 5′-*O*-(3,4,5-trihydroxybenzoyl):*

[172617-79-7] ***Stachyuranin A***



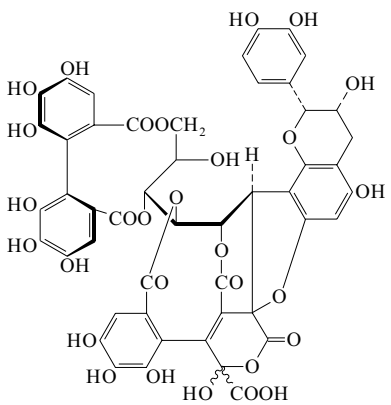
$C_{56}H_{42}O_{32}$ 1226.929

Off-white powder + $7H_2O$. $[\alpha]_D$ -15 (c, 1 in MeOH). λ_{max} 209 (ϵ 109650); 231 (sh) (ϵ 72440); 265 (sh) (ϵ 36310) (MeOH).

Hatano, T. *et al., Chem. Pharm. Bull.*, 1995, **43**, 1629; 2109 (*isol, uv, cd, pmr, cmr*)

Camelliatannin F C-62

[154561-15-6]



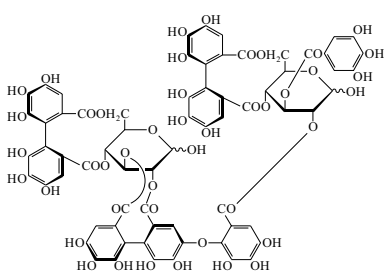
$C_{48}H_{34}O_{26}$ 1026.781

Constit. of the leaves of *Camellia japonica*. Off-white amorph. powder + $4H_2O$. $[\alpha]_D$ -89 (c, 1.6 in MeOH). λ_{max} 209 (ϵ 89125); 230 (sh) (ϵ 58884); 265 (ϵ 31622) (MeOH).

Han, L. *et al., Chem. Pharm. Bull.*, 1994, **42**, 1399 (*isol, uv, cd, pmr, cmr*)

Camelliatannin G C-63

[154524-53-5]



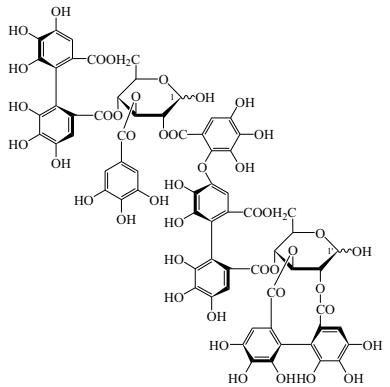
$C_{49}H_{34}O_{29}$ 1086.79

Constit. of the leaves of *Camellia japonica*. Pale yellow amorph. powder + $7H_2O$. $[\alpha]_D$ -245 (c, 1 in MeOH). λ_{max} 213 (ϵ 79430); 234 (sh) (ϵ 57540); 282 (sh) (ϵ 17380) (MeOH).

Han, L. *et al., Chem. Pharm. Bull.*, 1994, **42**, 1398 (*isol, uv, cd, pmr, cmr*)

Camelliatannin H C-64

[148159-86-8]



$C_{68}H_{48}O_{44}$ 1569.101

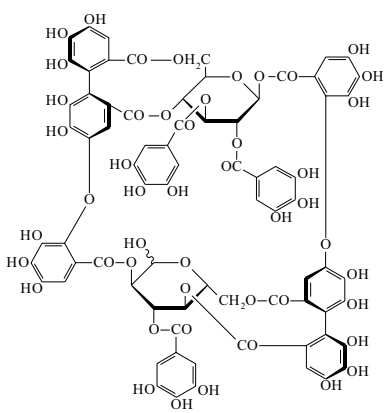
Constit. of the leaves of *Camellia japonica*. Off-white amorph. powder + $8H_2O$. $[\alpha]_D$ +90 (c, 1 in MeOH). λ_{max} 218 (ϵ 100000); 258 (sh) (ϵ 51290); 278 (sh) (ϵ 42660) (MeOH).

Han, L. *et al., Chem. Pharm. Bull.*, 1994, **42**, 1398 (*isol, uv, cd, pmr, cmr*)

Camelliin A C-65

[132731-66-9]

$C_{68}H_{48}O_{44}$ 1569.101



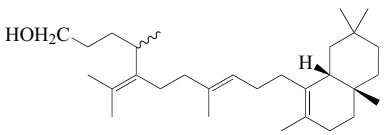
Exists as an equilibrated mixt. of α- and β-anomers. Isol. from the flower buds of *Camellia japonica* and *Camellia sasanqua*. Light brown amorph. powder + $10H_2O$. $[\alpha]_D^{20}$ +53 (c, 0.5 in MeOH).

1-O-(3,4,5-Trihydroxybenzoyl)(1β-):
[159935-08-7] ***Camellioferin A***
$C_{75}H_{52}O_{48}$ 1721.207
Constit. of *Camellia oleifera*. Light brown powder. $[\alpha]_D$ +67 (c, 1 in MeOH).

Yoshida, T. *et al., Chem. Pharm. Bull.*, 1990, **38**, 2681 (*struct, cd, pmr, cmr*)
Yoshida, T. *et al., Phytochemistry*, 1994, **37**, 241 (*Camellioferin A*)

Camelliin B C-66

[126347-60-2]



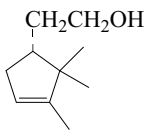
$C_{75}H_{52}O_{48}$ 1721.207

Exists as an equilibrated mixt. of α- and β-anomers (4:1). Isol. from the flower buds of *Camellia japonica* and *Camellia sasanqua*. Off-white amorph. powder + $15H_2O$. $[\alpha]_D^{20}$ -24 (c, 0.8 in MeOH). λ_{max} 224 (ϵ 115000); 276 (ϵ 60000) (MeOH) (Berdy).

Yoshida, T. *et al., Chem. Pharm. Bull.*, 1989, **37**, 3174; 1990, **38**, 1211; 2681; 1991, **39**, 2247 (*isol, uv, cd, pmr, cmr, pharmacol*)

Camelliol B C-67

[220359-72-8]



$C_{30}H_{52}O$ 428.74

Constit. of sasanqua oil (*Camellia sasanqua*). Gum. $[\alpha]_D^{25}$ +1.7 (c, 0.4 in $CHCl_3$). Related to Achilleol B, A-102.

Akihisa, T. *et al., J. Nat. Prod.*, 1999, **62**, 265-268 (*isol, pmr, cmr*)

Campholenic alcohol C-68

[1901-38-8]
2,2,3-Trimethyl-3-cyclopentene-1-ethanol, 9CI. FEMA 3741

(R)-form

$C_{10}H_{18}O$ 154.252

(R)-form [52437-39-5]
Bp_{21} 119-121° $Bp_{0.47}$ 65°. $[\alpha]_D^{20}$ +5.4 (c, 2.06 in $CHCl_3$). n_D^{28} 1.4708.

Ac: [52486-39-2]
$Bp_{0.46}$ 65°. $[\alpha]_D^{20}$ -2.1 (neat). n_D^{28} 1.4511.

Aldehyde: [4501-58-0]
Constit. of many essential oils of *Juniperus*, *Eucalyptus* and *Thymus* spp.. $Bp_{12.8}$ 83°. $[\alpha]_D^{20}$ +9.6 (neat).

(S)-form [36789-58-9]
Bp_8 150°. n_D 1.4710.

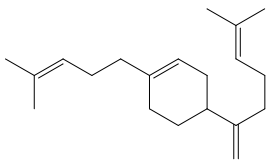
Ac:
Bp_8 104-106°. n_D^{20} 1.4564.

Aldehyde: [23727-15-3]
$Bp_{12.8}$ 83°. $[\alpha]_D^{22.5}$ -3.7 (neat). n_D 1.4645.

(ξ)-form
Constit. of *Juniperus communis* (juniper). Flavouring ingredient. Oil. $Bp_{0.6}$ 74-76°. $[\alpha]_D$ -1.5 (c, 8 in CCl_4). n_D 1.4736. The opt. rotns. of this isolate and its derivs were too small to allow reliable assignment of abs. config..

Ac: [36789-59-0] *FEMA 3657*
$C_{12}H_{20}O_2$ 196.289
Flavouring ingredient. Constit. of *Juniperus communis* (juniper). Oil with a sweet woody odour. Bp_5 96-97°. $[\alpha]_D$ -1 (c, 8 in CCl_4).

Aldehyde:2,2,3-Trimethyl-3-cyclopenten-1-ylacetaldehyde. ***Campholenic aldehyde.*** *FEMA 3592*
$C_{10}H_{16}O$ 152.236
Flavouring ingredient. Found in *Juniperus communis* (juniper). Oil. d^{20} 0.92.



Bp_{10} 77°. $[\alpha]_D^{20}$ -3.1 (CCl_4). Cas no. refers to the (*R*)-enantiomer.

Aldehyde, 3,4-epoxide: [36789-60-3] *1,2,2-Trimethyl-6-oxabicyclo[3.1.0]hexane-3-acetaldehyde, 9CI.* ***Epoxycampholenic aldehyde***
$C_{10}H_{16}O_2$ 168.235
Constit. of *Juniperus communis* (juniper). Oil. Bp_{10} 101-102°. $[\alpha]_D^{20}$ -0.83 ($CHCl_3$). Assigned *trans*-config. of epoxide ring relative to – CH_2CHO group.

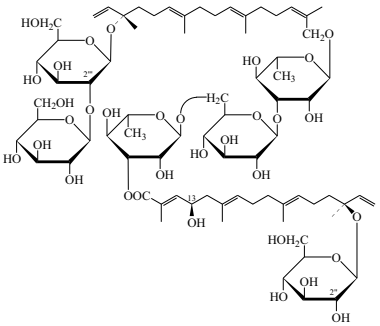
Capsianoside A C-77

[116107-40-5]
Capsianside A

$C_{76}H_{124}O_{33}$ 1565.796
Struct. revised in 1990. Constit. of fruits of *Capsicum annuum*. Amorph. powder. $[\alpha]_D$ -25.1 (MeOH).

2″-O-β-D-Glucopyranoside: [121940-51-0] ***Capsianoside C***. *Capsianside C*
$C_{82}H_{134}O_{38}$ 1727.938
Constit. of fruits of *Capsicum annuum*. Powder. $[\alpha]_D^{20}$ -21 (c, 0.5 in MeOH).



2‴-O-Deglucosyl: ***Capsianoside G***. *Capsianside G*
$C_{70}H_{114}O_{28}$ 1403.654
Constit. of *Capsicum annuum*. Powder. $[\alpha]_D^{20}$ -24.2 (c, 1 in MeOH).

13-Deoxy, 2″-O-β-D-glucopyranoside: [121924-09-2] ***Capsianoside E***. *Capsianside E*
$C_{82}H_{134}O_{37}$ 1711.938
Constit. of fruits of *Capsicum annuum*. Powder. $[\alpha]_D^{19}$ -21.9 (c, 1 in MeOH).

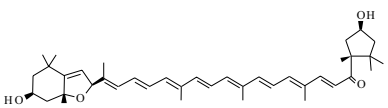
Izumitani, Y. *et al., Chem. Pharm. Bull.*, 1990, **38**, 1299-1307; 1991, **39**, 3258-3260 (*isol, ir, pmr, cmr, ms*)

Capsianoside B C-78

[121924-07-0]
Capsianside B

$C_{76}H_{124}O_{33}$ 1565.796
Constit. of the fruit of *Capsicum annuum*. Powder. $[\alpha]_D^{20}$ -18 (c, 0.7 in MeOH).

2″-O-β-D-Glucopyranosyl: [121924-08-1] ***Capsianoside D***. *Capsianside D*
$C_{82}H_{134}O_{38}$ 1727.938
Constit. of the fruit of *Capsicum annuum*. Powder. $[\alpha]_D^{20}$ -19.9 (c, 0.7 in MeOH).



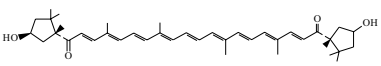
13-Deoxy, 2″-O-β-D-glucopyranosyl: ***Capsianoside F***. *Capsianside F*
$C_{82}H_{134}O_{37}$ 1711.938
Constit. of the fruit of *Capsicum annuum*. Powder. $[\alpha]_D^{19}$ -22.7 (c, 0.6 in MeOH).

2‴-O-Deglucosyl: ***Capsianoside H***. *Capsianside H*
$C_{70}H_{114}O_{28}$ 1403.654
Constit. of *Capsicum annuum*. Powder. $[\alpha]_D^{20}$ -22 (c, 1 in MeOH).

Izumitani, Y. *et al., Chem. Pharm. Bull.*, 1990, **38**, 1299-1307; 1991, **39**, 3258-3260 (*isol, ir, pmr, cmr, ms*)

Capsochrome C-79

[104012-89-7]
5,8-Epoxy-5,8-dihydro-3,3′-dihydroxy-β,κ-caroten-6′-one

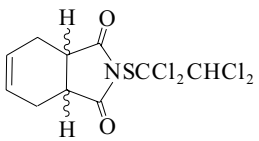


$C_{40}H_{56}O_4$ 600.88
Constit. of red paprika (*Capsicum annuum*). Yellow needles (C_6H_6/petrol). Mp 180-182° (195°).

Karrer, P. *et al., Helv. Chim. Acta*, 1945, **28**, 1143
Parkes, K.F.B. *et al., Tet. Lett.*, 1986, **27**, 2535

Capsorubin C-80

[470-38-2]
3,3′-Dihydroxy-κ,κ-carotene-6,6′-dione. E160



$C_{40}H_{56}O_4$ 600.88
Constit. of paprika (*Capsicum annuum*). Potential nutriceutical. Violet-red plates (petrol). Mp 201°. λ_{max} 468 ; 503 ; 542 (CS_2).

Diketone: [25494-49-9] κ,κ-*Carotene-3,3′,6,6′-tetrone. Capsorubone. Capsorubinidione*
$C_{40}H_{52}O_4$ 596.848
Prod. of oxidn. of pigments from paprika. Black cryst. (C_6H_6/MeOH). Mp 217° (209-210°). λ_{max} 301 ; 378 ; 451 ; 476 ; 510 (hexane).

Carbon dioxide C-90

[124-38-9]
Carbon oxide (CO_2). Carbonic anhydride. E290
O=C=O ($D_{\infty h}$)
CO_2 44.01
Final oxidation product of carbon. Forms part of the carbon cycle in nature. Interatomic distance C–O 115.98 pm. Leavening agent, propellant, aerating agent, preservative. Solvent for supercritical extraction e.g. of caffeine in manufacture of caffeine-free instant coffee. Used in carbonation of beverages, in the frozen food industry and as a component of controlled atmosphere packaging (CAD) to inhibit bacterial growth. Esp. effective against Gram-negative spoilage bacteria, e.g. *Pseudomonas*. Colourless, odourless gas. Spar. sol. H_2O, forming H_2CO_3. d 1. Mp -57° under 5 atm. Bp -78.2° Bp -78.5° Subl. -78.46. Log P 0.83 (calc). Liquefies at 20° under 50 atm. pressure. Aq. soln. is acid to litmus. Crit. point 31.3°/72.9atm. Triple pt. -56.6° at 5.11 atm. Reduced to CO by C or H_2. Dissociates above 2000° to CO +O_2.
▶ Above atm. conc. of 6% causes CNS effects. Asphyxiant at higher conc. Contact with solid causes burns and possibly frostbite. OES: long-term 5000

ppm; short-term 15000 ppm. FF6400000

Carbon disulfide, ISO C-91

[75-15-0]
Carbon sulfide (CS_2). Carbon bisulfide. Dithiocarbonic anhydride. Carbon disulphide, BSI

S=C=S ($D_{\infty h}$)

CS_2 76.143

C–S 155.3 pm. Obsolete fumigant against insects in stored grain and potatoes. Highly refracting colourless liq. Misc. EtOH, Et_2O, C_6H_6; spar. sol. H_2O. d_4^0 1.29. Mp -111.6°. Bp 46.5° Bp_{297} 20°. n_D^{15} 1.6315. Forms hemihydrate, dec. at -3°. A black solid form has been prepd. at high press..

► Extremely flammable, fl. p. -30°, autoignition temp. 90°. Toxic by inhalation, skin absorption and ingestion. Acute effects on CNS cause headache, dizziness and can lead to coma, and death by respiratory failure. Prolonged or repeated (chronic) exposure causes peripheral neuropathies, CNS effects and gastrointestinal disturbances. Occup. exposure assoc. with higher incidence of coronary heart disease and male and female reprod. effects. LD_{50} (rat, orl) 3188 mg/kg. Exp. reprod. and teratogenic effects. MEL: long-term 10 ppm (Sk). FF6650000

Carbonic acid C-93

[463-79-6]
$(HO)_2C=O$

CH_2O_3 62.025

Present in aq. solns. of CO_2, the hydration of CO_2 being a slow reaction. Forms a wide range of salts $M[HCO_3]$ and M_2CO_3, some of the most important of which are cross-referenced below.pK_{a1} 6.36; pK_{a2} 10.33 (25°). True diss. const. $[H^{\oplus}][HCO_3^{\ominus}]/H_2CO_3 = 0.00025$.

Mono-NH_4 salt: [1066-33-7] *Ammonium bicarbonate. Ammonium hydrogen carbonate. E503*
CH_5NO_3 79.055
Used in foods as an alkali, dough strengthener, leavening agent, pH control agent and texturizer. White solid. V. sol. H_2O. Mp 107.5° (very rapid heating). Comparatively stable at r.t.; volatile with dec. below Mp (at *ca.* 60°) to $NH_3 + CO_2 + H_2O$. The name E503 is also used for Ammonium carbonate, A-312.

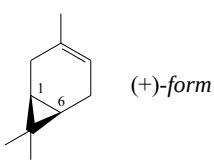
1-(2-Carboxyethyl)-1,2,3,4-tetrahydro-β-carboline-3-carboxylic acid



$C_{15}H_{16}N_2O_4$ 288.302
Present in soy and worcester sauces, yeast extract and wine as the (3*S*)-diastereoisomers. Formed by Pictet-Spengler condensation of tryptophan with 4-oxobutanoic acid to give predominantly the *cis*-isomer.. *cis*- and *trans*- isomers have been characterised spectroscopically.

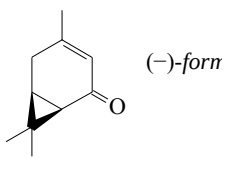
Gutsche, B. *et al., J. Agric. Food Chem.*, 1997, **45**, 2458-2462 (*synth, ms, nmr*)

3-Carene C-105

[13466-78-9]
3,7,7-Trimethylbicyclo[4.1.0]hept-3-ene. ***α-Carene****. Isodiprene*

$C_{10}H_{16}$ 136.236
Flavouring ingredient.

► Skin irritant. LD_{50} (rat, orl) 4800 mg/kg. FH8400000



(+)-*form* [498-15-7]
Widespread plant product, found esp. in turpentine oils (from *Pinus* spp.) and oil of galbanum. Oil with pleasant odour. Poorly sol. hexane. Bp_{200} 123-124° $Bp_{7.5}$ 168-169°. Oxidises in air.

(-)-*form* [20296-50-8]
Isol. from root oil of *Kaempferia galanga*. Oil. $[\alpha]_D^{30}$ -5.72.

Carnobacteriocins C-113

Peptides. Prod. by *Carnobacterium piscicola*. Bacteriocins with potential food uses.

Carnobacteriocin A [156066-35-2]

[155870-23-8, 155870-24-9]
Prod. by *Carnobacterium piscicola* LV17A. A mixt. of 3 components; the major component A3 is a 53 aminoacid peptide with one disulfide bridge, A2 has a Met oxidised to a sulfoxide, and A1 is a mixt. of peptides derived proteolytically from A3 and A2.

Carnobacteriocin B1 [155982-41-5]
Prod. by *Carnobacterium piscicola* LV17B. An oxidised form of Carnobacteriocin BM1.

Carnobacteriocin B2 [162429-94-9]

[155982-37-9]
Prod. by *Carnobacterium piscicola* LV17B. Contains 48 amino acid residues.

Carnobacteriocin BM1 [156014-92-5]

[165723-95-5]
Pisciocin V1B
Prod. by *Carnobacterium piscicola* LV17B and identical with Pisciocin V1B from the Pisciocin complex prod. by *Carnobacterium piscicola* V1. Contains 43 aminoacid residues.

Quadri, L.E. *et al., J. Biol. Chem.*, 1994, **269**, 12204-12211 (*Carnobacteriocin B*)
Worobo, R.W. *et al., Microbiology (Reading, U.K.)*, 1994, **140**, 517-526 (*Carnobacteriocin A*)
Yang, Y. *et al., Biochemistry*, 1999, **38**, 15437-15447 (*Carnobacteriocin B2, struct*)

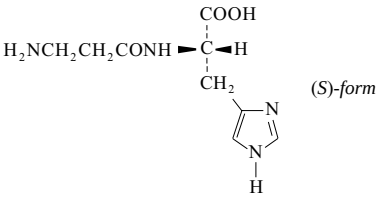
Carnocins C-114

Polypeptide bacteriocins.

Carnocin CP 5 [149983-81-3]
Prod. by *Carnobacterium piscicola* CP5.

Carnocin U I49 [142540-01-0]
Prod. by *Carnobacterium piscicola* UI49 isol. from fish.

Stoffels, G. *et al., J. Appl. Bacteriol.*, 1992, **73**, 309-316 (*Carnocin UI 49*)
Mathieu, F. *et al., Biotechnol. Lett.*, 1993, **15**, 587-590 (*Carnocin CP 5*)
Stoffels, G. *et al., Int. J. Food Microbiol.*, 1993, **20**, 199-210 (*Carnocin UI 49*)



Carnosin C-115

[146103-60-8]
Prod. by *Leuconostoc carnosum* LA44A from vacuum packed Vienna-type sausages. Bacteriocin.

Van Laack, R.L. *et al., Int. J. Food Microbiol.*, 1992, **16**, 183-195 (*isol*)

Carnosine C-116

N-*β-Alanylhistidine, 9CI*

(*S*)-*form*

$C_9H_{14}N_4O_3$ 226.235Log P -4.13 (calc).

(*R*)-*form* [5853-00-9]
D-form
Mp 260°. $[\alpha]_D^{28}$ -20.4 (c, 1.5 in H_2O).

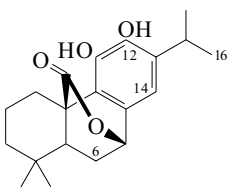
Hydrochloride:
Mp 245°.

N-*Benzyloxycarbonyl:*
$C_{17}H_{20}N_4O_5$ 360.369
Mp 161°. $[\alpha]_D^{24}$ -11 (H_2O).

(*S*)-*form* [305-84-0] *L-form*
Occurs in meats. Needles. Sol. EtOH; fairly sol. MeOH; poorly sol. butanol, hexane. Mp 246-250° dec. $[\alpha]_D^{20}$ +24.1 (c, 1.5 in H_2O). pK_{a1} 2.62; pK_{a2} 6.66; pK_{a3} 9.24 (25°). Log P -4.13 (calc). λ_{max} (H_2O) (Berdy).

▶ LD_{50} (mus, ipr) 9087 mg/kg. Exp. reprod. and teratogenic effects. MS3080000

Hydrochloride: [5852-99-3]
Mp 245°.



Nitrate: [5852-98-2]
Needles. Mp 219° (222° dec.).

*Sulfate:*Dec. at 238-40°.

Carpaine, 9CI C-127

[3463-92-1]

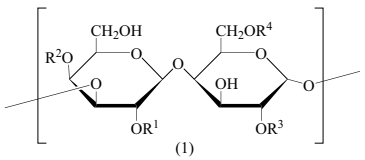
Absolute configuration

$C_{28}H_{50}N_2O_4$ 478.714
Homologue of Azimine. Originally considered to be a monomeric 13-membered cyclic lactone. Alkaloid from leaves of *Carica papaya* (papaya). Cubes (Et_2O). Sol. MeOH, C_6H_6; poorly sol. hexane. Mp 119-120° (117-118.5°). $[\alpha]_D$ +21.65 (c, 1.0 in EtOH). $[\alpha]_{230}^{22}$ -240 (c, 0.12 in MeOH). Log P 4.77 (calc). Prob. formed *in vivo* by dimerisation of Carpamic acid, from which it has been made *in vitro*.

1,2-Didehydro: [72362-02-8] ***Dehydrocarpaine I***. *12,13-Didehydrocarpaine, 9CI*
$C_{28}H_{48}N_2O_4$ 476.698
Alkaloid from the leaves of *Carica papaya* (papaya). Viscous oil.

1,1′,2,2′-Tetradehydro: [72362-03-9] ***Dehydrocarpaine II***. *12,13,25,26-Tetradehydrocarpaine, 9CI*
$C_{28}H_{46}N_2O_4$ 474.682
Alkaloid from the leaves of *Carica papaya* (papaya). Viscous oil.

2-Epimer: [3760-91-6] ***Pseudocarpaine***. *ψ-Carpaine*
$C_{28}H_{50}N_2O_4$ 478.714
Minor alkaloid from leaves of *Carica papaya* (papaya). Cryst. (petrol). Mp 65-68°. $[\alpha]_D^{28}$ +4.95 (c, 1.62 in EtOH). Yields carpamic and pseudocarpamic acids on hydrol..



2-Epimer, hydrochloride:
Cryst. (EtOH). Mp 295°.

Carrageenan C-128

[9000-07-1]
Carrageenin. Carragheen. Genuvisco J. FEMA 2596. E407

(1)

(2)

A complex mixt. of polysaccharides composed of galactans, the proportions of which vary with spp., season and environment. The major structural feature is β(1→3) and α(1→4) linked galactose units with various degrees and sites of sulfation (sulfate ester content 15-40%). The Greek prefixes denote the idealised constitution of different disaccharide units although native carrageenans show variation from these idealised structs. The struct. also varies during life-cycle of the alga. Used for gelling, thickening and emulsion stabilisation of foods (salts may also be used). Sol. H_2O; fairly sol. DMSO; poorly sol. oils, MeOH, hexane. ν component also referred to in the lit. alongside those descr. below.

►FI0700000

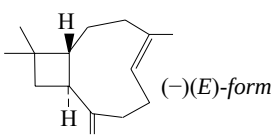
Relative Configuration

$C_{15}H_{14}O_6$ 290.272
Constit. of *Carthamus tinctorius* (safflower). Prims (MeOH). Mp 206-207°. $[\alpha]_D^{25}$ -2.6 (c, 0.005 in MeOH). λ_{max} 225 (log ϵ 4.04) (MeOH).

Yin, H.-B. *et al., J. Nat. Prod.*, 2000, **63**, 1164-1165



Cartormin C-132

$C_{27}H_{29}NO_{13}$ 575.525
Enolised β-diketone. Constit. of *Carthamus tinctorius* (safflower). Yellow prisms (MeOH). $[\alpha]_D^{27}$ -153.4 (c, 0.01 in Py). Mp >230° dec..

Yin, H.-B. *et al., Tet. Lett.*, 2000, **41**, 1955-1958 (*isol, pmr, cmr, ms, cryst struct*)

3(15),6-Caryophylladiene C-133

(−)(*E*)-*form*

$C_{15}H_{24}$ 204.355

(-)-(*E*)-*form* [87-44-5]
β-Caryophyllene. *β-Humulene (obsol.). Caryophyllene. Tincturoid. FEMA 2252*
Constit. of clove, cinnamon, mint, eucalyptus, thyme, lemon balm and many other oils. The main source is the clove tree *Eugenia caryophyllata*. Flavouring agent. Oil with v. faint odour. $Bp_{9.7}$ 118-119°. $[\alpha]_D^{21}$ -15 (c, 2.6 in $CHCl_3$).

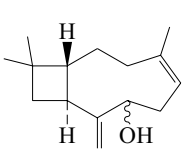
►Skin irritant. Fl. p. 97°. DT8400000

2-Epimer: [68832-35-9] ***2-Epicaryophyllene***. *9βH-Caryophyllene*

$C_{15}H_{24}$ 204.355
Waxy solid. $[\alpha]_D$ +196 ($CHCl_3$).

3β,15-Epoxide: [88395-50-0] ***3,15-Epoxy-6-caryophyllene***
$C_{15}H_{24}O$ 220.354
Constit. of clary sage oil (*Salvia sclarea*). Oil. $[\alpha]_D$ +40 (c, 3.4 in $CHCl_3$).

(-)-(*Z*)-*form* [118-65-0]
γ-Caryophyllene. *Isocaryophyllene*
Widespread in plants (*Jasminum, Origanum* and *Pimpinella* spp.). Oil. $Bp_{14.5}$ 125°. $[\alpha]_D^{24}$ -27.



(+)-(*E*)-*form*
(+)-β-Caryophyllene

Catalase, 9CI C-159

[9001-05-2]
Equilase. Caperase. Optidase. E.C. 1.11.1.6
A haemoprotein containing 4 polypeptide subunits of equal size each of which is associated with a ferric protoporphyrin IX prosthetic group. Converts H_2O_2 into O_2 + H_2O; can also act as a peroxidase for which several org. substrates, esp. EtOH, can act as hydrogen donor. Used in the food industry to remove traces of H_2O_2 in the sterilisation of milk for cheese making. A Mn protein containing Mn^{II} in the resting state is called pseudocatalase; enzymes from some microorganisms, e.g. *Penicillium*, that exhibit both catalase and peroxidase activity are sometimes referred to as catalase peroxidase.

Cellulose, 9CI, 8CI C-173

[9004-34-6]
E460

$C_6H_{10}O_5$ 162.142
An unbranched polymer composed of 1,4 β-linked glucopyranose units. Polymeric. Minimum formula given. Native cellulose consists of two different crystal structures, a two-chain monoclinic phase and a single chain triclinic phase. The most abundant organic material found in plants forming the principal constit. of their cell walls giving them structural strength. Anticaking agent, binding agent and other uses in food. Insol. H_2O, most solvs., but forms sol. complexes in conc. aq. $ZnCl_2$, copper-amine solutions and with Fe sodium tartrate solution.

▶ OES: long-term 10 mg m^{-3} for total inhalable dust; 5 mg m^{-3} for respirable dust. OES: short-term 20 mg m^{-3} for total inhalable dust. Reacts vigorously with oxidants. FJ5691460

Poly-O-*sulfate:* [9032-43-3] *Cellulose sulfate*
Used in food thickeners. Sol. H_2O.

Per-Ac: [9004-35-7]

[9012-09-3, 9035-69-2] *Cellulose acetate, 9CI*
Indirect food additive arising by migration from paper and paperboard packaging. Flake or powder. Mp 306° (triacetate form). $[\alpha]_D^{25}$ -20.9 ($CHCl_3$) (as triacetate).

Per-Me ether: [9004-67-5] *Methyl cellulose.*

FEMA 2696. E461
Stabiliser, thickener and emulsifier for foodstuffs.

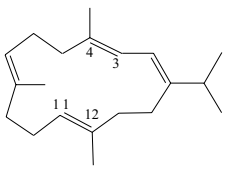
▶ FJ5959000

Poly-Et ether: [9004-57-3] *Ethyl cellulose. Ethocel*
Stabiliser and thickener for foods. Diluent in food marking inks. Indirect additive arising by migration from paper/paperboard packaging. Powder or granules. Sol. most org. solvs. Only low DS products (1.3) show significant H_2O solubility.

Poly(carboxymethyl) ether: [9000-11-7]

[9045-95-8, 9050-04-8] ***Croscarmellose, BAN, INN***. *Carboxymethyl cellulose. Carmellose, BAN. Carmellose gum. FEMA 2239. E466*
Food additive. Stabiliser, thickener, moisture control agent, emulsifier. Indirect additive arising by migration from cotton fabrics used in food packaging. Amorph. powder. Sol. H_2O. Mp 300°.

▶ Exp. reprod. effects. LD_{50} (rat, orl) 27000 mg/kg. FJ5950000



Poly(2-hydroxyethyl, Me) ether: [9032-42-2] *Hydroxyethyl methyl cellulose. HEMC*
HEMC of low hydroxyethyl ratio admitted as food thickening and gelling agent in EU. Better water solubility and electrolyte tolerance than methyl cellulose. Thermally gellable in hot water. Soly. in org. solvs. varies with DS value.

Poly(2-hydroxypropyl, Me) ether: [9004-65-3] *Hydroxypropyl methyl cellulose. HPMC. E463*
Thickening and binding agent approved for food use in USA and EU. Used in deep fried batters. Powder. Sol. H_2O. Thermally gellable in hot water. Sol. in aq. solns. varies with DS value.

Cerebrosides C-180

RCH(OH)CH(NHCOR′)CH_2O-sugar
Cerebroside is the general name given to monoglycosyl ceramides. On hydrol. they afford a long-chain base such as Sphingenine, a fatty acid (R′COOH) and a sugar (most commonly galactose). These compds. occur as mixtures and are important constits. of lipids of many tissues, esp. brain and nerve. Some members of this class have individual entries, for example see 2-Amino-4-octadecene-1,3-diol, A-283.

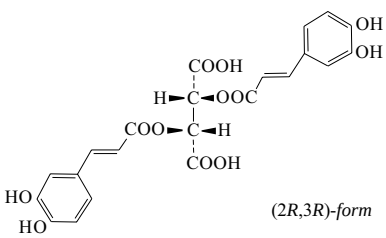
Chestanin C-188

[68325-50-8]
MP3. Chestanin A

$C_{40}H_{42}O_{26}$ 938.756
Isol. from Chinese chestnut (*Castanea crenata*) galls caused by the chestnut gall wasp *Dryocosmus kuriphilus*. Sl. yellow powder. $[\alpha]_D^{23}$ -11.8 (c, 1.27 in H_2O). Shows no distinct Mp. Bitter taste.

O-*(3,4,5-Trihydroxybenzoyl)(1):* [115410-38-3] ***Galloylchestanin A***
$C_{47}H_{46}O_{30}$ 1090.86
Off-white amorph. powder + $4H_2O$. $[\alpha]_D^{20}$ -21.5 (c, 1.2 in H_2O). Substd. at the 6-posn. of the left-hand glucose residue.



O-*(3,4,5-Trihydroxybenzoyl)(2):* [115410-39-4] ***Galloylchestanin B***
$C_{47}H_{46}O_{30}$ 1090.86
Off-white amorph. powder + $3H_2O$. $[\alpha]_D^{20}$ -18.6 (c, 0.90 in H_2O). Substd. at the 6-posn. of the right-hand glucose residue.

Chitosan C-192

[9012-76-4]
Poly(1,4-β-D-glucopyranosamine), 9CI. Poliglusam, INN, USAN†
Polymer consisting of deacetylated chitin and *N*-acetylated chitan where the deacetylation or *N*-acetylation is partial or unspecified. Obt. from Chitin by methods incl. alkaline hydrol. and thermochemical-chemical treatment. Used in edible coatings for fruit and vegetables and in biodegradable packaging films.. Leaflets. Sol. dil. formic acid, AcOH; insol. H_2O, mineral acids. Typically 80-90% deacylated, though may contain a proportion of insoluble crystallites (Hydrochitin) characterised by higher acetyl content.

Chlorine C-194

[7782-50-5]
Dichlorine. E925
Cl_2
Cl 35.453

Atomic No. 17. Ground state electron config. [Ne]$3s^2 3p^5$. Discovered in 1774 by C.W. Scheele. There are 11 Isotopes of which ^{35}Cl and ^{37}Cl are stable and find application in nmr spectroscopy. Abundance: 126 ppm (earth's crust), 19,000 ppm (sea water). Cl–Cl: 199 pm (gas); 198 (solid). Bleaching agent for flour. Greenish-yellow pungent gas combining directly and vigorously with nearly all elements. At 10° 1 vol. H_2O dissolves 3.1 vols. chlorine; sol. organochlorine solvs. Mp -101°. Bp -34.9°. Forms complexes with hydrogen halides and hydrates. Bond energy 243 kJ mol^{-1}.

▶ Respiratory irritant, the liq. burns the skin. Exposure should not exceed 1 ppm. FO2100000

Chlorine oxide (ClO_2), 11CI C-195

[10049-04-4]
Chlorine oxide†. *Chlorine dioxide. E926*

ClO_2 (C_{2v})

ClO_2 67.452

Paramagnetic, odd electron delocalised over whole molecule. Cl–O 147 pm, angle OClO 118°. In the solid state the dimer is diamagnetic below -84° and involves one bridging Cl–O–Cl interaction. Bleaching agent for flour. Orange-green gas; yellowish-red cryst. Unstable in light, stable in the dark. Insol. H_2O. Mp -59°. Bp 11°. Forms a hydrate.

▶ Explodes in contact with organic materials. Max. safe partial pressure 36 mm. FO3000000

Chloroform C-203

[67-66-3]
Trichloromethane, 9CI. R20
$CHCl_3$
$CHCl_3$ 119.377
Indirect food additive arising from adhesives and polymers. Liq. Spar. sol. H_2O. d_4^{25} 1.48. Mp -63.2°. Bp 61.3°. n_D^{20} 1.4467. Log P 1.95 (calc). Nonflammable. Slowly dec. in air and light forming $COCl_2$ (toxic) and other products. Forms hydrate with $18H_2O$, dec. at 1.6°. Forms azeotrope contg. 2.5% H_2O, Bp 56°.

► Vigorous reaction with Me_2CO and base, explosive reaction with some materials. Poss. human carcinogen. Skin, eye and respiratory tract irritant. Adverse systemic effects by inhalation can lead to loss of consciousness, cardiac respiratory failure and death. Hepatotoxic and nephrotoxic. Exp. carcinogen. Exp. reprod. and teratogenic effects. OES: long-term 2 ppm (Sk). Can autoxidise on storage to generate highly toxic phosgene. FS9100000

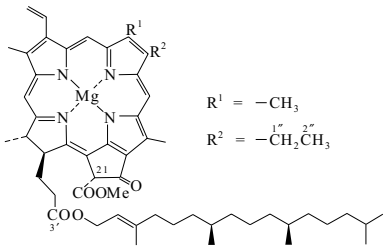
Chlorophyll C-215

[8049-84-1]



[1406-65-1]
Biophyll. C.I. Natural green 3, 9CI. E140. C.I. 75810

An extract of Chlorophyll a, C-216 and Chlorophyll b, C-217 obt. by solv. extraction of alfalfa meal. The central magnesium atom of the natural chlorophylls may be replaced by copper in the commercial material to obtain blue shaded products, as opposed to yellow shades for the magnesium compd.. Colourant for cosmetics and foodstuffs, esp. meat casings, fats and shortening. Alkaline hydrol. gives C.I. Natural green 5, C-255.

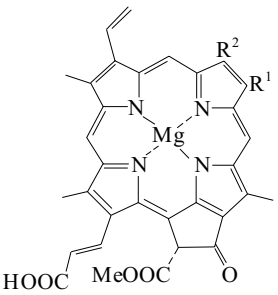
Chlorophyll b C-217

[519-62-0]
As Chlorophyll a, C-216 with
$R^1 = -CHO$, $R^2 = -CH_2CH_3$

$C_{55}H_{70}MgN_4O_6$ 907.486
Green pigment in leaves of plants together with Chlorophyll a, C-216. Dark green powder (petrol). Reacts as Chlorophyll a with acids and Chlorophyllase to give similar prods., i.e. Phaeophytin b, Phaeophorbide b, P-237 and Me ester. Alkaline hydrol. gives Rhodin g_7. Other esters e.g. geranylgeranyl are found in various microorganisms.



3′-Free acid: [14428-12-7] ***Chlorophyllide b***
$C_{35}H_{32}MgN_4O_6$ 628.966

1′,2′-Didehydro: [89456-97-3] *Divinylchlorophyll b. 4-Desethyl-4-vinylchlorophyll b*
$C_{55}H_{68}MgN_4O_6$ 905.47

Cholest-8(14)-en-3-ol, 9CI C-237

[18684-35-0]

(3β,5α)-*form*

$C_{27}H_{46}O$ 386.66

(3α,5α)-*form* [35479-87-9]
Cryst. (MeOH). Mp 141-145°.

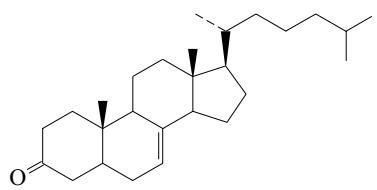
(3β,5α)-*form* [566-99-4]
Doristerol
Constit. of *Dioscorea batatas* (Chinese yam). Needles (MeOH). Mp 120°. $[\alpha]_D^{23}$ +33 (c, 1 in $CHCl_3$).

Ac: [6562-21-6]
$C_{29}H_{48}O_2$ 428.697
Leaflets (EtOH). Mp 77-78°. $[\alpha]_D^{21}$ +9.5 (c, 1.5 in $CHCl_3$).

Benzoyl: [6673-65-0]
Mp 114°. $[\alpha]_D$ +11 ($CHCl_3$).

(3β,5β)-*form* [16826-38-3]
Needles (Me_2CO/MeCN). Mp 83-85°. $[\alpha]_D^{23}$ +33 (c, 1 in $CHCl_3$).

Ac:
Cryst. (Et_2O/MeOH). Mp 114-115°. $[\alpha]_D^{16}$ +30.5 (c, 0.8 in $CHCl_3$).



Benzoyl: [16826-39-4]
Cryst. (Me_2CO/MeOH). Mp 96-98°. $[\alpha]_D$ +32 (c, 1 in $CHCl_3$).

[15147-62-3, 26758-20-3]

Choline C-239

[62-49-7]
2-Hydroxy-N,N,N-*trimethylethanaminium(1+), 9CI. (2-Hydroxyethyl)trimethylammonium. Bilineurine. Sincalin. Sinkalin. Amanitin†. Araquine. Arachine*

$Me_3N^{\oplus}CH_2CH_2OH$

$C_5H_{14}NO^{\oplus}$ 104.172
Nutritional supplement. Occurs free and combined in many animal and vegetable foods with highest concentrations found in egg yolk, meat, fish, milk, cereals and legumes.

▶ FZ9625000

Hydroxide: [123-41-1]
$C_5H_{15}NO_2$ 121.179
Syrup, cryst. with difficulty. V. sol. H_2O, EtOH; insol. Et_2O. Strong base, absorbs CO_2 from air. Forms cryst. addn. compds. with H_2PtCl_6 etc..

▶ GA4025500

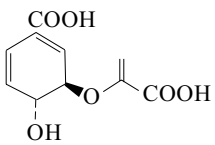
Chloride: [67-48-1] ***Choline chloride, INN***
$C_5H_{14}ClNO$ 139.624
Deliquescent cryst.

▶ LD_{50} (rat, orl) 3400 mg/kg. KH2975000

O-*(4-Hydroxybenzoyl):* [5094-31-5] ***(4-Hydroxybenzoyl)choline***
$C_{12}H_{18}NO_3^{\oplus}$ 224.279
Alkaloid from white mustard (*Sinapis alba*).

O-*(3,4-Dimethoxybenzoyl):* [15797-38-3]

[95210-18-7] ***Hesperaline***
$C_{14}H_{22}NO_4^{\oplus}$ 268.332
Alkaloid from seeds of damask violet (*Hesperis matronalis* Cruciferae). Mp 182-183° (as iodide).



O-*(4-Hydroxy-3-methoxycinnamoyl):*
[85927-25-9]

[22513-68-4, 31545-00-3] ***Feruloylcholine***
$C_{15}H_{22}NO_4^{\oplus}$ 280.343
Constit. of garlic mustard (*Alliaria officinalis*). Mp 203-205° (as chloride). λ_{max} 236 (log ε 4.05); 334 (log ε 4.31) (no solvent reported).

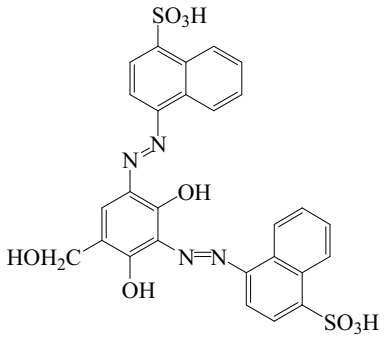
[25738-38-9]

[2118-39-0]

6-Amino-4-hydroxy-3-[(7-sulfo-4-[(4-sulfophenyl)azo]-1-naphthalenyl)azo]-2,7-naphthalenedisulfonic acid, 9CI. Black 7984. C.I. 27755. C.I. 27775. E 152

$C_{26}H_{19}N_5O_{13}S_4$ 737.726



Black food dye; no longer permitted in the EU and not FDA approved. Usually obt. as tetra-Na salt, to which trade names refer.

Pearson, D. *et al., J. Assoc. Public Anal.*, 1967, **5**, 37-38 (*uv*)
Colour Index, 3rd edn., 1971, **4**, 4251

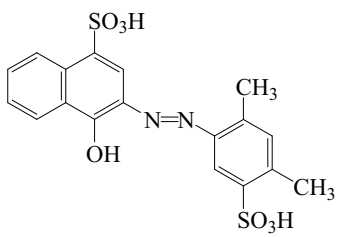
C.I. Food Brown 3, 8CI C-252

[4553-89-3]

4,4′-[[2,4-Dihydroxy-5-(hydroxymethyl)-1,3-phenylene]bis(azo)]bis-1-naphthalenesulfonic acid, 9CI. Chocolate brown HT. Brown HT. C.I. 20285. E155

$C_{27}H_{20}N_4O_9S_2$ 608.608



Most names refer to the di-Na salt, to which CAS no. refers. Food colourant. Prohibited in USA, France, Norway and Sweden. Reddish-brown solid (as di-Na salt).

Colour Index, 3rd edn., 1971, **4**, 4146 (*props, synth*)
Chaytor, J.P. *et al., J. Chromatogr.*, 1986, **368**, 450-455 (*hplc, detn in food*)

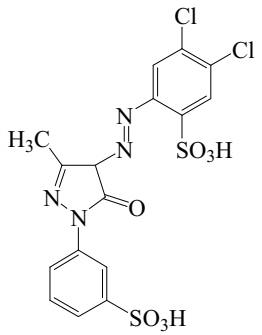
C.I. Natural green 5 C-255

E141. C.I. 75815. Chlorophyllin copper complex. Potassium-sodium-copper chlorophyllin. Sodium-potassium-copper chlorophyllin

R = CH_3, CHO



Essentially a mixt. of the copper complexes of Chlorin e_6 and Rhodin g_7 as their tri-K salts. The presence of a small amount of Na ions, acquired during the manuf. process, has given rise to the mixed sodium/potassium nomenclature used for the commercial material. Food and cosmetic colourant. Green-black powder.

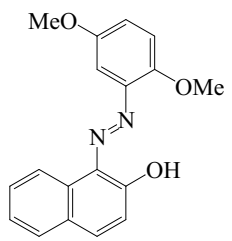
Judah, M.A. *et al., Ind. Eng. Chem.*, 1954, **46**, 2262-2271 (*manuf, rev*)

C.I. Pigment Yellow C-256

[65212-84-2]

[65212-76-2]
*4,5-Dichloro-2-[[4,5-dihydro-3-methyl-5-oxo-1-(3-sulfophenyl)-1*H*-pyrazol-4-yl]azo]benzenesulfonic acid, 9CI. 4,5-Dichloro-2-[[5-hydroxy-3-methyl-1-(3-sulfophenyl)-1*H*-pyrazol-4-yl]azo]benzenesulfonic acid*

$C_{16}H_{12}Cl_2N_4O_7S_2$ 507.331



Tautomerism with hydroxypyrazole struct. probable. The name C.I. Pigment Yellow refers to the Ca salt. FDA approved colourant for food contact high density polyethylene and polypropylene resins. Yellow solid (as Ca salt). Ca salt polymorphic.

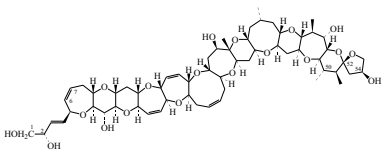
Cibulins C-258



Alkyl propyl sulfoxides
$H_3CCH_2CH_2SOR$

A group of substances with the suggested struct. where R is a long-chain fatty acid residue of varying length. Isol. from onions inoculated with *Botrytis cinerea* and *Fusarium solani*. λ_{max} 210 (MeOH) (Berdy).

Dmitriev, A.P. *et al., CA*, 1989, **110**, 92249d (*isol*)

Ciguatoxin (Pacific) C-259

[11050-21-8]
Pacific Ciguatoxin 1. P-CTX 1B

$C_{60}H_{86}O_{19}$ 1111.328

Earliest known of this group of toxins; sometimes simply known as Ciguatoxin or CTX. Isol. from the moray eel (*Gymnothorax javanicus*) and other fish and shellfish esp. coral reef spp. Present in the dinoflagellate *Gambierdiscus toxicus*. Causes ciguatera food poisoning. *G. toxicus* is the primary cause.

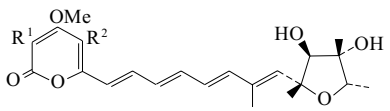
Citreovirenone C-284

[103955-68-6]



$C_{14}H_{16}O_4$ 248.278
Mycotoxin prod. by the rice storage mould *Penicillium citreo-viride* B. Oil. $[\alpha]_D^{30}$ -109.5 (c, 0.66 in $CHCl_3$). λ_{max} 209 (ε 20000); 222 (sh) (ε 7000); 267 (ε 12000) (MeOH) (Derep).

Shizuri, Y. *et al., Chem. Lett.*, 1986, 1129 (*isol, struct, nmr*)

Citreoviridin C-285

[25425-12-1]
Citreoviridin A

$R^1 = H, R^2 = CH_3$

$C_{23}H_{30}O_6$ 402.486
Metab. of *Penicillium citreo-viride, Penicillium toxicarium, Penicillium ochrosalmoneum* and *Aspergillus terreus*. Isol. from mouldy rice. Toxin formerly responsible for epidemic-like occurrences of cardiac beriberi in East Asia. Deep yellow cryst. (MeOH). Sol. MeOH, $CHCl_3$; poorly sol. H_2O, hexane. Mp 107-111°. λ_{max} 204 (ε 17000); 235 (ε 10200); 286 (ε 24600); 294 (ε 27100); 388 (ε 48000); 398 (sh) (ε 46000) (EtOH) (Derep). λ_{max} 205 (ε 14100); 238 (ε 10000); 294 (ε 24500); 390 (ε 45000) (MeOH) (Berdy). λ_{max} 234 (ε 10200); 294 (ε 27100); 388 (ε 48000) (EtOH) (Berdy).

▶ LD_{50} (mus, orl) 29 mg/kg. LD_{50} (mus, ipr) 7.2 mg/kg , LD_{50} (mus, scu) 11 mg/kg. Exp. reprod. and teratogenic effects.. UQ1235000

Ac:

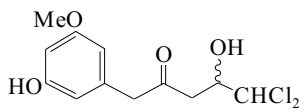
Citreoviridinol A_1 C-288

[94161-12-3]



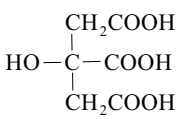
$C_{22}H_{28}O_8$ 420.458
Mycotoxin prod. by *Penicillium pedemontanum*.

4-Epimer: [94122-10-8] ***Citreoviridinol A_2***
$C_{22}H_{28}O_8$ 420.458
Mycotoxin of *Penicillium pedemontanum*.

Rebuffat, S. *et al., Org. Mass Spectrom.*, 1984, **19**, 349 (*ms*)

Citreovirone C-289

[103955-67-5]
5,5-Dichloro-4-hydroxy-1-(3-hydroxy-5-methoxyphenyl)-2-pentanone, 9CI



$C_{12}H_{14}Cl_2O_4$ 293.146
Mycotoxin prod. by the rice storage mould *Penicillium citreo-viride*. Oil. $[\alpha]_D^{30}$ +21.8 (c, 4.0 in $CHCl_3$). λ_{max} 209 (ε 14000); 222 (sh) (ε 7000); 280 (ε 1000) (MeOH) (Derep).

Shizuri, Y. *et al., Chem. Lett.*, 1986, 1129 (*isol, struct, nmr*)

Citric acid C-290

[77-92-9]
2-Hydroxy-1,2,3-propanetricarboxylic acid, 9CI. 2-Hydroxytricarballylic acid. E330. FEMA 2306

$C_6H_8O_7$ 192.125
Occurs in the free state in lemons, currants, beetroot etc. and the seeds and juices of many flowers and plants. Commercially produced by large-scale fermentation of sugars using the mould *Aspergillus nigus*. Constit. of fruit drinks, pharmaceutical syrups. Flavouring ingredient. Primary function as an acid, acidity regulator, antioxidant, preservative and sequestrant. One of the most widely used food additives. Its clean taste makes it applicable in soft drinks, sugar confectionery, preserves, soups and sauces. Cryst. + $1H_2O$ (H_2O), losing H_2O at 70-75°. V. sol. H_2O, EtOH; mod. sol. Et_2O. Mp 135° (monohydrate) Mp 153° (anhyd.). pK_{a1} 3.13; pK_{a2} 4.78; pK_{a3} 6.43 (25°).

▶ Eye and skin irritant. LD_{50} (rat, orl) 6730 mg/kg. GE7350000

Mono-Na salt: [18996-35-5]

[994-36-5] *Sodium dihydrogen citrate. Bicitra*
Preservative. Hygroscopic solid. Mp 212°.

▶ LD_{50} (rat, ipr) 1348 mg/kg. GE7950000

Di-Na salt: [144-33-2]

[994-36-5, 6132-05-4] *Disodium hydrogen citrate. Alkacitron*
Preservative. Solid + $1\frac{1}{2}H_2O$. Mp 149° dec.

Tri-Na salt: [68-04-2]

[994-36-5] *Sodium citrate. Trisodium citrate. Citrosodine. E331. FEMA 3026*
Used in food processing as an emulsifying agent, pH control agent, colour control agent, flavouring agent and modifier. Used in conjunction with ascorbate or erythorbate derivs. as a cure accelerator in processed meat products. Cryst. + $2H_2O$. Mp 300°. Pentahydrate also known.

▶ GE8300000

Mono-K salt: [866-83-1] *Potassium dihydrogen citrate*
Preservative. Cryst. powder. Sol. H_2O.

Tri-K salt: [866-84-2]

[7778-49-6] *Potassium citrate. Tripotassium citrate. Urocit K. E332*
Alkalising and buffering agent. Used in foods, beverages and oral pharmaceutical formulations. More sol. than Na salts; also used in low-Na foods and as a potassium source in nutritional supplements. Cryst. + H_2O. Mp 275° dec. CAS no. refers to anhydr. form.

Ca salt (2:3): [813-94-5]

[5785-44-4] *Calcium citrate. Citracal. E333*
$C_{12}H_{10}Ca_3O_{14}$ 498.437
Emulsifier in foods, dietary supplement. Cryst. + $4H_2O$. Loses H_2O of crystallisation at 100-120°.

Mn salt: [10024-66-5] *Manganese citrate*
Dietary supplement. Pale orange or pinkish white powder.

Tri-NH_4 salt: [3458-72-8] *Ammonium citrate. Triammonium citrate. E380*
Emulsifier and acidity regulator used in the food industry.

Tri-Et ester: [77-93-0] *Triethyl citrate. FEMA 3083. E1505*
$C_{12}H_{20}O_7$ 276.286
Used in foods as a flavouring agent, solvent and surface-active agent. Oil with a bitter taste. Sl. sol. H_2O. d^{25} 1.14. Bp 294° Bp_1 127°.

▶ LD_{50} (rat, orl) 5900 mg/kg. GE8050000

1-Isopropyl ester: [101396-15-0]

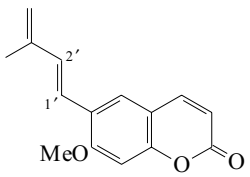
[1321-57-9, 39413-05-3, 135630-69-2]
$C_9H_{14}O_7$ 234.205
Sequestrant, antioxidant, solvent and vehicle in margarine manuf.. Isopropyl citrate for food use is a mixt. of the 1- and 2- isomers together with smaller amts. of di- and triisopropyl citrates.

2-Isopropyl ester: [83966-24-9]

[1321-57-9, 39413-05-3]
$C_9H_{14}O_7$ 234.205
Sequestrant and antioxidant for margarine and other foodstuffs. Plasticiser for food contact packaging. Cryst. (Me_2CO/hexane). Mp 126-128°. Food grade material is a mixt. of the 1- and 2- isopropyl esters.

2-Octadecyl ester:2-Stearyl citrate
$C_{24}H_{44}O_7$ 444.607
Antioxidant, sequestrant and emulsifier for use in margarine. Plasticiser for food contact packaging. Cryst. (toluene). Mp 80.4-80.9°. Food grade material is a mixt. of mono-, di- and triesters prepared by esterification of citric acid with stearyl alcohol.

Ac, tributyl ester: [77-90-7] *Acetyl tributyl citrate. ATBC. FEMA 3080*
$C_{20}H_{34}O_8$ 402.484
Flavouring ingredient. Plasticiser used in packaging films for food. Liq. with a faint, sweet herbaceous odour and mild fruity flavour. Bp_1 165-170°. Mp >330°.



Me ether, tri-Me ester:
$C_{10}H_{16}O_7$ 248.232

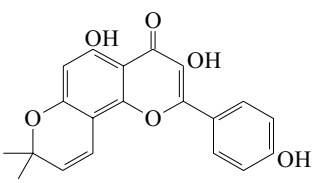
$C_{36}H_{53}N_7O_9$ 727.856

Isol. from *Citrus sinensis* (orange). Cryst. Mp 160-163°. $[\alpha]_D^{22}$ -103.09 (c, 0.14 in MeOH).

Matsubara, Y. *et al., Agric. Biol. Chem.*, 1991, **55**, 2923 (*isol, pmr, cmr, ms*)

Citrusin IV C-298

[139626-31-6]



$C_{41}H_{55}N_9O_{14}$ 897.937

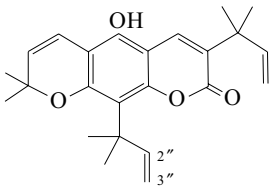
Isol. from *Citrus sinensis* (orange). Yellow cryst. Mp 220-221°. $[\alpha]_D^{22}$ +5.58 (c, 0.05 in MeOH).

Matsubara, Y. *et al., Agric. Biol. Chem.*, 1991, **55**, 2923 (*isol, pmr, cmr, ms*)

Citrusinol C-299

[112516-43-5]
*3,5-Dihydroxy-2-(4-hydroxyphenyl)-8,8-dimethyl-4*H*,8*H*-benzo[1,2-*b*:3,4-b′]dipyran-4-one, 9CI*

$C_{20}H_{16}O_6$ 352.343



Isol. from root bark of king orange (*Citrus nobilis*). Yellow needles + $1H_2O$ (Me_2CO). Mp 252-254°.

3,6-Di-Me ether: [157072-30-5] *2-(4-Hydroxyphenyl)-3,6-dimethoxy-8,8-dimethyl-4*H*,8*H*-benzo[1,2-*b*:3,4-b′]dipyran-4-one*
$C_{22}H_{20}O_6$ 380.396
Constit. of the fruits of tangerine (*Citrus reticulata* cv. *blanco*). Mp 225-226°.

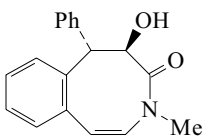
Wu, T.S. *et al., Phytochemistry*, 1987, **26**, 3094 (*isol*)
Saxena, V.K. *et al., Phytochemistry*, 1994, **36**, 1039 (*di-Me ether*)

Clausarin C-300

[62770-67-6]
*3,10-Bis(1,1-dimethyl-2-propenyl)-5-hydroxy-8,8-dimethyl-2*H*,8*H*-benzo[1,2-b:5′,4′-b′]dipyran-2-one, 9CI*

$C_{24}H_{28}O_4$ 380.483
Sol. MeOH, C_6H_6; poorly sol. H_2O. Mp 208° dec. λ_{max} 232 ; 282 ; 338 (MeOH) (Berdy).

Ac:
$C_{26}H_{30}O_5$ 422.52
Mp 120°.



2″,3″-Epoxide: ***Oxaclausarin***
$C_{24}H_{28}O_5$ 396.482
Oil. $[\alpha]_D$ -32.3 (c, 0.192 in EtOH).

*6,7-Dihydro, 6,7-dihydroxy (*trans-*):* ***Clausarinol***
$C_{24}H_{30}O_6$ 414.497
Constit. of a cross hybrid of *Citrus paradisi* (grapefruit) and *Citrus tangerina* (tangerine). Oil. $[\alpha]_D$ -27.8 (c, 0.07 in $CHCl_3$).

Anwer, F. *et al., Experientia*, 1977, **33**, 412 (*isol, struct*)

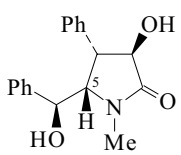
ζ-Clausenamide C-301

[136173-85-8]
*5,6-Dihydro-5-hydroxy-3-methyl-6-phenyl-3-benzazocin-4(3*H*)-one, 9CI*



$C_{18}H_{17}NO_2$ 279.338
Alkaloid from *Clausena lansium* (wampee).

Yang, M. *et al., Chin. Chem. Lett.*, 1991, **2**, 291; *CA*, **115**, 155059 (*isol, struct*)

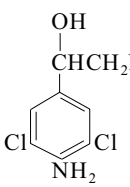
Clausenamide C-302

[119616-14-7]
3-Hydroxy-5-(hydroxyphenylmethyl)-1-methyl-4-phenyl-2-pyrrolidinone, 9CI. Lansimide 4

$C_{18}H_{19}NO_3$ 297.353
λ_{max} 257 (ϵ 500) (MeOH) (Berdy).

(±)-*form* [103541-15-7]
Isol. from the leaves of *Clausena lansium* (wampee). Needles. Mp 239-240°.

Di-Ac:
Cubes. Mp 165-167°.



1′-Me ether: [119518-25-1] ***Lansimide 3***
$C_{19}H_{21}NO_3$ 311.38
Constit. of *Clausena lansium* (wampee).

1′,5-Diepimer: [114528-82-4] ***Neoclausenamide***
Isol. from *Clausena lansium* (wampee). Cubes. Mp 205-216°.

Wang, J.-Q. *et al., J.C.S. Perkin 1*, 1996, 209-212 (*synth, cryst struct, Neoclausenamide*)
Cappi, M.W. *et al., Chem. Comm.*, 1998, 1159-1160 (*synth*)

Clenbuterol, BAN, INN C-303

[37148-27-9]
*4-Amino-3,5-dichloro-α-[[(1,1-dimethylethyl)amino]methyl]benzenemethanol, 9CI. 1-(4-Amino-3,5-dichlorophenyl)-2-*tert*-butylaminoethanol. Spiropent. Ventipulmin. NAB 365. Many other names*

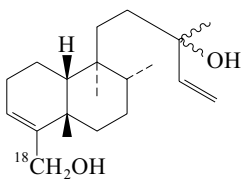
$C_{12}H_{18}Cl_2N_2O$ 277.192
Potential food contaminant arising from its illicit use to improve carcass quality and productivity in cattle. Approved tocolytic agent for cows in several European countries. Log P 2.38 (calc).
▶ LD_{50} (rat,orl) 159 mg/kg. Exp. reprod. and teratogenic effects. DA4726600

(+)-*form* [50499-60-0]
Cryst. (H_2O). Mp 127-128.5°. $[\alpha]_{364}^{20}$ +244 (c, 2.28 in $CHCl_3$). Abs. configs. not detd. (1994).

Hydrochloride: [50310-83-3]
Cryst. (Et_2O). Mp 197.5-198°. $[\alpha]_{364}^{20}$ +126 (c, 2.15 in H_2O).

(-)-*form* [50306-03-1]
Cryst. (H_2O). $[\alpha]_{364}^{20}$ -243 (c, 2.65 in $CHCl_3$). Active isomer.

Hydrochloride: [50310-85-5]
Cryst. (Et_2O). Mp 187-188° dec. $[\alpha]_{364}^{20}$ -126 (c, 2.72 in H_2O).



(±)-*form* [50306-01-9]

Hydrochloride: [69930-61-6]
Powder (2-propanol). Mp 174-175.5°.

Gummy solid. $[\alpha]_D^{36}$ -31.6 (MeOH).

9-Epimer, Me ether: **O-*Methyl-β-clusin***
$C_{23}H_{28}O_7$ 416.47
Oil. $[\alpha]_D^{23}$ -3.5 (c, 0.2 in $CHCl_3$).

Koul, S.K. *et al., Phytochemistry*, 1983, **22**, 999-1000; 1984, **23**, 2099-2101

Cobalt(*II*) chloride ($CoCl_2$), 8CI C-311

[7646-79-9]
Cobalt chloride†. *Cobalt dichloride. Cobaltous chloride. Cobatope-57. Cobatope-60*

$CoCl_2$

Cl_2Co 129.839

Has $CdCl_2$ struct.. Formerly approved as a food additive but now prohibited. Pale blue hygroscopic cryst. Sol. H_2O, polar org. solvs. Mp 735°. Bp 1049°. Turns pink on exp. to moist air. Paramagnetic (also hydrates).

▶ Human systemic effects by ingestion include anorexia, gastrointestinal disturbances, cardiomyopathy, thyroid enlargement and weight loss. LD_{50} (rat, orl) 80 mg/kg. Exp. cardiotoxic. Exp. reprod. and teratogenic effects. MEL:

long-term 0.1 mg m^{-3} (as Co). GF9800000

Dihydrate: [16544-92-6]
Violet-pink solid. Octahedral polymeric struct. with bridging Cl.

Hexahydrate: [7791-13-1] *Hexaaquacobalt(2+) chloride. Cobalt(*II*) chloride hexahydrate*
$Cl_2CoH_{12}O_6$ 237.93
Red monoclinic cryst. Sol. H_2O, Me_2CO. Mp 86°. Best considered as chloride salt of Hexaaquacobalt(*II*)(2+).

▶ LD_{50} (rat, orl) 766 mg/kg. Exp. reprod. and teratogenic effects. GG0200000

Compd. with graphite: [12672-50-3]
Intercalation compd.; contains an excess of Cl in the stoichiometry.

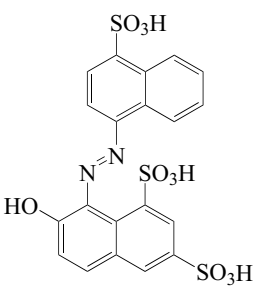
Coccinin C-313

[132242-50-3]



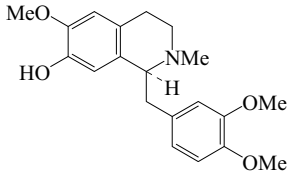
$C_{26}H_{40}O_{11}$ 528.595
Constit. of *Phaseolus coccineus* (scarlet runner bean). Plates (butanol aq.). Mp 190-193°. $[\alpha]_D$ +19.9 (MeOH).

Yamashita, M. *et al., Chem. Pharm. Bull.*, 1990, **38**, 2905 (*isol, pmr, cmr, cryst struct*)

Cochineal Red A C-314

[7244-14-6]

[2611-82-7]
7-Hydroxy-8-[(4-sulfo-1-naphthalenyl)azo]-1,3-naphthalenedisulfonic acid, 9CI. Acid Scarlet 3R. Brilliant Ponceau 3R. Brilliant Scarlet 3R. Coccine. New coccine. Food Red No. 102. Naphthalene Scarlet 4R. Neucoccin. Ponceau 4R. Strawberry Red. C.I. Acid Red 18. C.I. Food Red 7. C.I. 16255. E124



$C_{20}H_{14}N_2O_{10}S_3$ 538.536
Strictly the trade names apply to the tri-Na salt. Synthetic food colouring. Bright red powder (as tri-Na salt).

Colour Index, 3rd edn., 1971, **4**, 4074 (*synth*)

Codeine, BAN, USAN C-316

[76-57-3]
7,8-Didehydro-4,5-epoxy-3-methoxy-17-methylmorphinan-6-ol, 9CI. Methylmorphine. Codicept. Kodein. Tussipan

Absolute Configuration

$C_{18}H_{21}NO_3$ 299.369
Opium alkaloid (*Papaver somniferum*) (content ca. 1%). Prisms (Et_2O or C_6H_6), octahedra or rhombic prisms + H_2O (H_2O). Sol. EtOH, $CHCl_3$, Me_2CO; spar. sol. CCl_4, H_2O. Mp 155°. $[\alpha]_D$ -137.8 (EtOH). Log P 0.82 (uncertain value) (calc). Also used as complex with sulfonated styrene-divinylbenzene copolymer (Codeine polistirex, USAN).

▶ Human and exp. reprod. effects. Exp. teratogen. LD_{50} (rat, orl) 427 mg/kg. QD0893000

Hydrochloride: [1422-07-7]
Prisms + $2H_2O$ (H_2O). Mp 287° (as dihydrate). $[\alpha]_D^{22.5}$ -108.2 (H_2O).

▶ LD_{50} (rat, orl) 750 mg/kg. QD1050000

Sulfate salt: [6854-40-6]

[1420-53-7] ***Codeine sulfate, USAN***
Needles + $3H_2O$. Component of Copavin.

Phosphate salt: [41444-62-6]

[52-28-8] ***Codeine phosphate, BAN, JAN, USAN.*** *Brochodine. Codeinfos. Codeisan. Codeophen. Codlin. Duraspan. Paveral. Sedantole. Solcodein. Vixaton*

$C_{18}H_{21}NO_6P$ 378.341
Needles + $\frac{1}{2}H_2O$. Component of Proval and Migraleve.

Compd. with calcium bis(2-acetylsalicylate): [81648-77-3] *Paxidine*

N-*Oxide:* [3688-65-1] ***Codeine* N-*oxide***. *Codeigene. Codeine aminoxyde. Genocodein*
$C_{18}H_{21}NO_4$ 315.368
Alkaloid from *Papaver somniferum* (opium poppy). Platelets (H_2O). Mp 231-232°.

▶ QD1260000

N-*Oxide; hydrochloride:*
Cryst. Mp 219-220°. $[\alpha]_D^{20}$ -105.8 (c, 2 in H_2O).

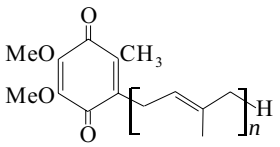
6-O-*β*-*D*-*Glucuronopyranoside:* [20736-11-2]
$C_{24}H_{29}NO_9$ 475.494
Mp 274-275° dec. (hemihydrate). $[\alpha]_D^{20}$ -224 (c, 1 in H_2O).

Ac: [6703-27-1]
Prisms (Et_2O). Mp 133.5°.

▶ LD_{50} (mus, scu) 99 mg/kg. QD0960000

3-Pyridinecarboxylate: See Nicocodine in *The Combined Chemical Dictionary.*

6-Ketone: [467-13-0] *7,8-Didehydro-4,5-epoxy-3-methoxy-17-methylmorphinan-6-one.* ***Codeinone***
$C_{18}H_{19}NO_3$ 297.353
Prisms (EtOAc). Mp 181.5-182.5°. $[\alpha]_D^{20}$ -205 (EtOH). Subl. under reduced pressure.



▶ LD_{50} (mus, scu) 11 mg/kg. QD2169000

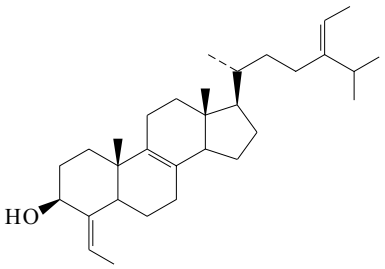
Coenzyme Q C-317

Mitoquinone. Ubiquinone

A group of related substances having n = 1-12; the main naturally occurring homologues have n = 6-10. Subscript number (≡Ubiquinone no.) indicates n. For lowest homologue, see 2,3-Dihydroxy-5-methyl-1,4-benzoquinone. In redox bioequilibrium with the reduced forms (hydroquinones), the CAS nos. for some of which are given in this entry.

Coenzyme Q_4 [4370-62-1]
Ubiquinone 4
$C_{29}H_{42}O_4$ 454.648
Isol. from various yeasts. Red oil.

Coenzyme Q_6 [1065-31-2]
Ubiquinone 6. Ubiquinone 30
$C_{39}H_{58}O_4$ 590.885
Isol. from bakers' yeast (*Saccharomyces cerevisiae*). Orange-yellow cryst. (EtOH) or red oil. Mp 19-20° (16°).



Coenzyme Q_{10} [303-98-0]
Ubiquinone 10. Ubiquinone 50. Ubidecarenone, BAN, INN. NSC 140865. Many other names
$C_{59}H_{90}O_4$ 863.358
Isol. from beef heart. Orange cryst. (MeOH or EtOH) at low temp. Mp 49.9°. Log P 20.24 (uncertain value) (calc).

▶ Exp. reprod. and teratogenic effects. DK3900000

Coffeasterene C-318

$C_{31}H_{50}O$ 438.735
Dubious struct., no more recent work reported. Isol. from coffee bean oil. Mp 164°. $[\alpha]_D$ +4.
Kaufmann, H.P. *et al., Fette, Seifen, Anstrichm.*, 1964, **66**, 461; *CA*, **61**, 14722h

Cohibin A C-319

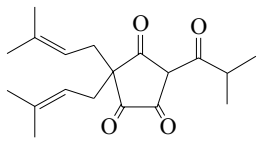
[189508-31-4]

$C_{35}H_{64}O_4$ 548.888
Constit. of the roots of *Annona muricata* (soursop). Powder. Mp 60-62°. $[\alpha]_D$ +12 (c, 0.1 in MeOH). Obt. as a mixture with Cohibin B to which the data refers λ_{max} 212 (log ϵ 2.82) (MeOH).
Gleye, C. *et al., Phytochemistry*, 1997, **44**, 1541 (*isol, uv, pmr, cmr, ms*)

Cohibin B C-320

[189508-32-5]
As Cohibin A, C-319 with
m = 10, n = 13
$C_{35}H_{64}O_4$ 548.888
Constit. of *Annona muricata* (soursop). Obt. as a mixture with Cohibin A.
Gleye, C. *et al., Phytochemistry*, 1987, **44**, 1541 (*isol, uv, pmr, cmr, ms*)

Cohibin C C-321



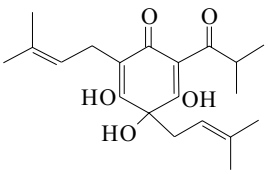
As Cohibin A, C-319 with
m = 14, n = 11
$C_{37}H_{68}O_4$ 576.942
Obt. as a mixt. with Cohibin D, C-322 to which data refers. Constit. of *Annona muricata* (soursop). Waxy solid. λ_{max} 214 (log ϵ 3.62) (MeOH).
Gleye, C. *et al., J. Nat. Prod.*, 2000, **63**, 1192-1196

Cohibin D C-322

As Cohibin A, C-319 with
m = 11, n = 14
$C_{37}H_{68}O_4$ 576.942
Obt. as a mixt. with Cohibin C, C-321. Constit. of *Annona muricata* (soursop).
Gleye, C. *et al., J. Nat. Prod.*, 2000, **63**, 1192-1196

Cohulupone C-323

[1891-34-5]
3,3-Bis(3-methyl-2-butenyl)-5-(2-methyl-1-oxopropyl)-1,2,4-cyclopentanetrione, 9CI



$C_{19}H_{26}O_4$ 318.412
Constit. of hops. Oil. $Bp_{0.0001}$ 100°.

2,3-Diaminonaphthalene deriv.:
Orange cryst. (MeOH). Mp 135°.

Wright, D. *et al., J.C.S.*, 1963, 1769 (*synth*)

Colicin E3 C-325

[11032-90-9]
Composed of 2 proteins, A and B. Protein A is a special kind of RNase and is made up of 551 amino acid residues; it is protected by an immunity protein (protein B) which contains 84 amino acid residues. Prod. by *Escherichia coli*. Bacteriocin; kills sensitive *E. coli* cells.

Collybial C-326

[164300-75-8]
2,10,10-Trimethyl-4-oxotricyclo[7.2.0.0^{2,5}]undec-6-ene-6-carboxaldehyde, 9CI

$C_{15}H_{20}O_2$ 232.322
Constit. of *Collybia confluens* (clustered tough shank). Needles. Sol. MeOH, Me_2CO, Et_2O; poorly sol. H_2O. Mp 121°. λ_{max} 236 (ε 8571) (MeOH) (Berdy).

Simon, B. *et al., Z. Naturforsch., C*, 1995, **50**, 173 (*isol, pmr, cmr*)

Colneleic acid C-327

9-(1,3-Nonadienyloxy)-8-nonenoic acid, 9CI
$H_3C(CH_2)_4CH{=}CHCH{=}CH\text{-}O\text{-}CH{=}CH(CH_2)_6COOH$
$C_{18}H_{30}O_3$ 294.433
(2′E,4′Z,8E)-form [52761-34-9]
Product of the enzymic oxidation of potato lipids. Isol. as the Me ester by glc.

[52077-21-1]

Galliard, T. *et al., Biochem. J.*, 1972, **129**, 743 (*isol*)

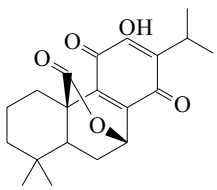
Colubrinic acid C-329

[67594-73-4]
Zizyberanalic acid

$C_{30}H_{46}O_4$ 470.691
Constit. of *Zizyphus jujuba* (Chinese date). Cryst. (EtOAc). Mp 282-284° (263-265°). $[\alpha]_D^{20}$ +3 (c, 1.15 in Py).



Me ester: [67594-78-9]
$C_{31}H_{48}O_4$ 484.718
Cubic cryst. (petrol/Et_2O). Mp 173-180° (dec.). $[\alpha]_D^{25}$ -39 (c, 0.2 in $CHCl_3$).

3-Deoxy, 1,3-didehydro: [125456-52-2] ***Zizyberenalic acid***
$C_{30}H_{44}O_3$ 452.676
Cryst. Mp 214-216°. $[\alpha]_D^{18}$ +24 (c, 0.5 in MeOH). λ_{max} 239 (log ε 3.48); 266 (sh) (log ε 3.22) (no solvent reported).

Roitman, J.N. *et al., Phytochemistry*, 1978, **17**, 491 (*isol, ir, ms, pmr*)
Baxter, R. *et al., Phytochemistry*, 1988, **27**, 2350 (*isol, cryst struct*)

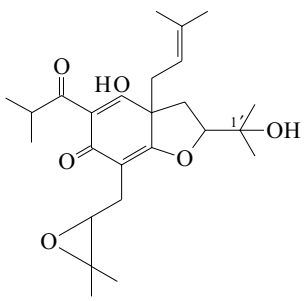
Lee, S.-S. *et al., Phytochemistry*, 1997, **46**, 549-554 (*Zizyberenalic acid*)

Columbaridione C-330

[156162-09-3]

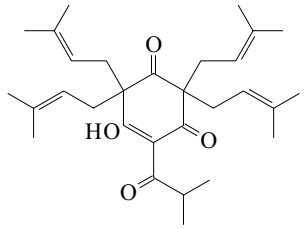


$C_{20}H_{24}O_5$ 344.407
Constit. of *Salvia columbariae* (California chia). Orange oil.

Luis, J.G. *et al., Phytochemistry*, 1994, **36**, 251 (*isol, pmr, cmr*)

Colupdox a C-331

[35923-67-2]



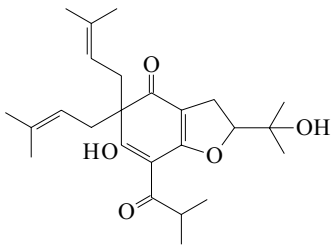
$C_{25}H_{36}O_6$ 432.556
Enolised β-diketone. Isol. from hops.

1′-Deoxy: [36136-11-5] ***Colupox b***
$C_{25}H_{36}O_5$ 416.556
Isol. from hops.

Kokubo, E. *et al., Proc. Am. Soc. Brew. Chem.*, 1971, 265 (*isol*)
Kokubo, E. *et al., CA*, 1973, **78**, 159926 (*struct*)

Colupone C-332

[16658-23-4]
5-Hydroxy-2,2,6,6-tetrakis(3-methyl-2-butenyl)-4-(2-methyl-1-oxopropyl)-4-cyclohexene-1,3-dione, 9CI



$C_{30}H_{44}O_4$ 468.675

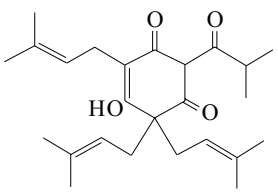
Congener of Lupulone, L-123. Found in hops.

Elvidge, J.A. *et al., J.C.S.(C)*, 1969, 1839 (*pmr, uv, ir*)

Colupox a C-333

[18944-21-3]

$C_{25}H_{36}O_5$ 416.556



Isol. from hops. V. pale yellow oil. Racemic.

[22592-22-9]

Cahill, D.M. *et al., J.C.S.(C)*, 1969, 938 (*synth*)
Kokubo, E. *et al., Proc. Am. Soc. Brew. Chem.*, 1971, 265 (*isol*)

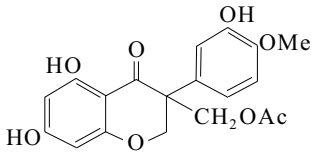
Colupulone C-334

[468-27-9]

$C_{25}H_{36}O_4$ 400.557



Constit. of the resin of English hops. Cryst. (MeOH). Sol. MeOH, Et_2O; fairly sol. H_2O. Mp 92-93°. λ_{max} 228 ; 280 ; 338 (MeOH) (Berdy).

Collins, M. *et al., J.C.S.(C)*, 1971, 3814 (*struct*)
Borremans, F. *et al., Org. Magn. Reson.*, 1975, **7**, 415 (*cmr*)

Comosin C-335

[99877-69-7]

3-[(Acetyloxy)methyl]-2,3-dihydro-5,7-dihydroxy-3-(3-hydroxy-4-methoxyphenyl)-4H-1-benzopyran-4-one, 9CI

$C_{19}H_{18}O_8$ 374.346

Constit. of *Muscari comosum* (tassel hyacinth). Vitreous solid.

Adinolfi, M. *et al., Phytochemistry*, 1985, **24**, 2423
Adinolfi, M. *et al., Magn. Reson. Chem.*, 1986, **24**, 663 (*pmr, cmr*)

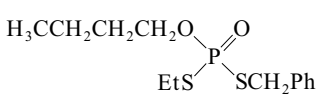
Concanavalin A C-336

[11028-71-0]

Con A

[CaMn]

A phytagglutinin or lectin. Isol. from jackbeans, *Canavalia ensiformis*. Each subunit of Con A contains one $Ca^{2\oplus}$ and one $Mn^{2\oplus}$ ion. MW = 27000. Contains 283 amino acid residues.



► LD_{50} (mus, ivn) 50 mg/kg. Exp. reprod. and teratogenic effects. GK6890000

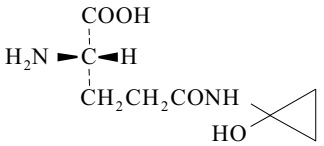
Copper(*II*) sulfate C-347
[7758-98-7]

[10124-44-4, 18939-61-2]
Copper sulfate, BSI†*. Cupric sulfate, USAN*

$CuSO_4$
CuO_4S 159.61
Hygroscopic white rhomb. cryst. or amorph. powder. V. sol. H_2O; sol. MeOH, glycerol; sl. sol. EtOH. Mp 200°. Dec. above 560°; forms CuO at 650°.
▶ Ingestion of large amounts of copper salts (15-75 mg Cu) causes gastrointestinal disturbances. Haemolysis, hepatotoxic and nephrotoxic effects, and death also result from acute exposure. Chronic copper toxicity usually only encountered with inherited metabolic copper disorders (e.g. Wilson's disease). LD_{50} (rat, orl) 300 mg/kg. Exp. reprod. and teratogenic effects. GL8800000



Mineral-*form* [24270-43-7]
Chalcocyanite, 9CI*. Chalcokyonite. Blue Copperas. Chalcanthite*
V. hygroscopic pale green, sky-blue or yellowish-brown orthorhombic cryst. V. sol. H_2O. Pure artificial cryst. are colourless.
Pentahydrate: [7758-99-8] *Hydrocyanite. Pentaaquasulfatocopper(*II*). Bluestone. Blue vitriol. Roman vitriol. Salzburg vitriol*
Used in foods as a nutrient supplement and processing aid. Blue cryst. (H_2O). V. sol. H_2O; sol. MeOH, glycerol; sl. sol. EtOH. Loses $2H_2O$ at 30°, two more at 110°, becomes anhyd. by 250°. Acidic: 0.2*M* aq. soln. has pH 4.0.

Cosmosiin C-362

[578-74-5]
7-O-β-D-Glucopyranosyloxy-4′,5-dihydroxyflavone. Apigenin 7-O-glucoside. Cosmetin. Apigetrin

$C_{21}H_{20}O_{10}$ 432.383
Yellow needles (EtOH or Me_2CO). Mp 178° Mp 203° Mp 229-232°. $[\alpha]_D$ -64 (Py). Forms a dihydrate, Mp 218-220°.

2″-Ac: [75357-75-4] *Apigenin 7-O-(2″-O-acetylglucoside)*
$C_{23}H_{22}O_{11}$ 474.42
Isol. from *Matricaria chamomilla* (German chamomile). No phys. props. reported.

6″-Ac: [72741-92-5] *Apigenin 7-O-(6″-O-acetylglucoside)*
$C_{23}H_{22}O_{11}$ 474.42
Isol. from *Matricaria chamomilla* (German chamomile). No phys. props. reported.

2″,3″-Di-Ac: [84323-20-6]
$C_{25}H_{24}O_{12}$ 516.457
Isol. from *Matricaria chamomilla* (German chamomile). No phys. props. reported.

3″,4″-Di-Ac: [84323-21-7]
$C_{25}H_{24}O_{12}$ 516.457
Isol. from *Matricaria chamomilla* (German chamomile). No phys. props. reported.

6″-O-Malonyl:6″-Malonylcosmosiin
$C_{24}H_{22}O_{13}$ 518.43
Isol. from *Petroselinum crispum* (parsley). No phys. props. reported.

6″-O-(4-Carboxy-3-hydroxy-3-methylbutanoyl): [173356-77-9] *6″-O-(3-Hydroxy-3-methylglutaroyl)cosmosiin*. ***Chamaemeloside***
$C_{27}H_{28}O_{14}$ 576.51
Constit. of the flowers of *Chamaemelum nobile* (Roman chamomile). Amorph. yellow powder. $[\alpha]_D^{20}$ -74.5 (c, 0.2 in Py). λ_{max} 268 (ϵ 20780); 333 (ϵ 24200) (MeOH).

6″-O-(4-Hydroxycinnamoyl): [61237-19-2] ***Terniflorin***. *Echinacin*
$C_{30}H_{26}O_{12}$ 578.528
Isol. from *Pogostemon cablin* (patchouli). Cryst. Mp 261-263°. Identity of samples not certain. Mp. refers to Echinacin.

O-(2,3-Dihydroxycinnamoyl): [35397-62-7] ***Anthemoside***
$C_{30}H_{26}O_{13}$ 594.528
Constit. of *Anthemis nobilis* (Roman chamomile). Posn. of esterification not determined.

4′-O-(3,4-Dihydroxycinnamoyl): [20196-92-3] ***Piperitoside***
$C_{30}H_{26}O_{13}$ 594.528
Isol. from *Mentha piperita* (peppermint) leaves. Mp 251-253°. $[\alpha]_D^{18}$ -63.

3″-O-(3,4-Dihydroxycinnamoyl): [79366-62-4] *3″-O-Caffeoylcosmosiin*
$C_{30}H_{26}O_{13}$ 594.528
Isol. from leaves of *Perilla frutescens* (perilla). No phys. props. reported.

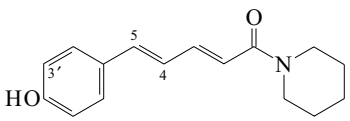
6″-O-α-L-Rhamnopyranosyl: [552-57-8] *Apigenin 7-O-rutinoside*. ***Isorhoifolin***
$C_{27}H_{30}O_{14}$ 578.526
Isol. from leaves of *Citrus paradisi* (grapefruit) and other plant spp.. Small needles (MeOH). Mp 269-270°. $[\alpha]_D^{23}$ -98.2 (c, 1.19 in Py).

6″-O-α-L-Rhamnopyranosyl, 4′-O-(3,4-dihydroxycinnamoyl): [14637-28-6] ***Menthoside***. *Apigenin 7-O-rutinoside 4′-O-caffeate*
$C_{36}H_{36}O_{17}$ 740.67
Isol. from *Mentha piperita* (peppermint) leaves. Cryst. (EtOH). Mp 271-273°. $[\alpha]_D^{18}$ -89 (c, 0.1 in DMF).

2″-β-D-Apiofuranosyl: [26544-34-3] ***Apiin***. *7-(2-Apiosylglucosyl)apigenin*
$C_{26}H_{28}O_{14}$ 564.499
Constit. of parsley (*Petroselinum crispum*) and of the flowers of *Anthemis nobilis* (Roman chamomile). First isol. in 1843. Cryst. (EtOH). Mp 236-237°. $[\alpha]_D$ -130 (c, 0.12 in MeOH). λ_{max} 267 (ϵ 15136); 342 (ϵ 19950) (MeOH) (Berdy).

2″-β-D-Apiofuranosyl, 6″-Ac: ***6″-Acetylapiin***
$C_{28}H_{30}O_{15}$ 606.536
Constit. of parsley. Powder. $[\alpha]_D^{25}$ -151.6 (c, 0.4 in MeOH). λ_{max} 269 (log ϵ 4); 334 (log ϵ 4.1) (MeOH).

2″-β-D-Apiofuranosyl, 6″-O-malonyl: [60478-75-3] ***6″-Malonylapiin***
$C_{29}H_{30}O_{17}$ 650.546
Isol. from parsley.



O″-Galacturonosyl: [126254-76-0]
$C_{27}H_{28}O_{16}$ 608.509
Isol. from *Cuminum cyminum* (cumin).

Cuscohygrine C-409

[454-14-8]

[46727-05-3]
1,3-Bis(1-methyl-2-pyrrolidinyl)-2-propanone, 9CI. Cuskhygrine. Bellaradine. Hellaradine

$C_{13}H_{24}N_2O$ 224.345

Stereochem. not fully established. Natural Cuscohygrine is either the *meso*-form (illus.) or a mixt. of *meso*- and (±)-forms. Like other related alkaloids it appears to racemise and epimerise readily. It is unknown in opt. active form but opt. active dihydrocuscohygrine is known which suggests that the opt. active form may be present in the plant. The correct struct. was assigned by Liebermann in 1896 but for some years an incorrect alternative was put forward by Hess. Hellaradine appears to be a misprint in *CA* for Bellaradine. Alkaloid from the root of *Cyphomandra betacea* (tree tomato). Oil; cryst. + $3\frac{1}{2}H_2O$. d_4^{16} 0.98. Mp 40-41° (hydrate). $n_D^{18.4}$ 1.4845.

Methiodide:
Mp 244°.

Oxime:
Mp 53-54°.

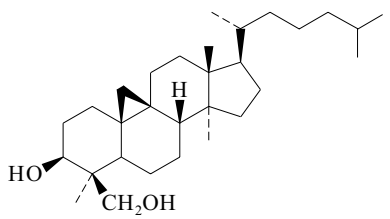
Cycloartane-3,25-diol C-417

9,19-Cyclolanostane-3,25-diol

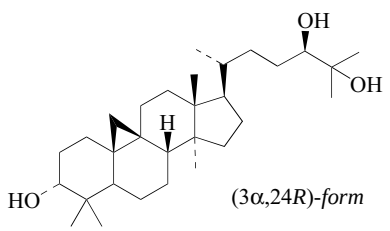


$C_{30}H_{52}O_2$ 444.74

3β-*form* [26525-84-8]
Constit. of mature wheat straw (*Triticum aestivum*).
Gaspar, E.M.M. *et al., Phytochemistry*, 1993, **34**, 523

Cycloartane-3,29-diol C-418

9,19-Cyclolanostane-3,29-diol



$C_{30}H_{52}O_2$ 444.74

3β-*form* [157772-00-4]
Constit. of *Mangifera indica* (mango). Cryst. Mp 196-198°. $[\alpha]_D$ +34.9 (c, 0.18 in $CHCl_3$).
Khan, M.A. *et al., J. Nat. Prod.*, 1994, **57**, 988 (*isol, pmr, cmr*)

Cycloartane-3,24,25-triol C-419

9,19-Cyclolanostane-3,24,25-triol

(3α,24*R*)-*form*

$C_{30}H_{52}O_3$ 460.739

(3α,24*R*)-*form*
Cryst. (MeOH). Mp 201-202°. $[\alpha]_D^{20}$ +35.9 (c, 0.33 in MeOH).

(3β,24*R*)-*form*

24-Ac: [339155-11-2]
$C_{32}H_{54}O_4$ 502.776
Cryst. ($CHCl_3$/hexane). Mp 160°.

3-Tetradecanoyl: [357419-30-8]
$C_{44}H_{78}O_4$ 671.098
Amorph. solid.

3-Hexadecanoyl: [357419-31-9]
$C_{46}H_{82}O_4$ 699.151
Cryst. Mp 81-82° .

24,25-Isopropylidene: [57576-30-4]
$C_{33}H_{56}O_3$ 500.804
Cryst. Mp 189°.

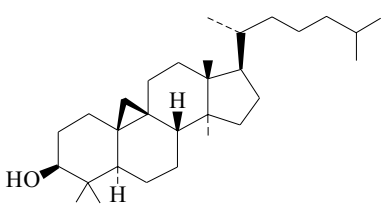
3-Ketone:24,25-Dihydroxycycloartan-3-one
$C_{30}H_{50}O_3$ 458.723
Cryst. (EtOH/hexane). Mp 150-152°. $[\alpha]_D^{20}$ +13.1 (c, 1.1 in $CHCl_3$).

(3β,24*S*)-*form*

25-Me ether: [357419-12-6] *25-Methoxycycloartane-3,24-diol*
$C_{31}H_{54}O_3$ 474.766
Cryst. Mp 140-145°. $[\alpha]_D$ +29 (c, 0.4 in $CHCl_3$).

25-Me ether, 3-hexadecanoyl: [357419-26-2]
$C_{47}H_{84}O_4$ 713.178
Amorph. solid.

(3β,24ξ)-*form* [110044-47-8]
Constit. of *Mangifera indica* (mango). Cryst. (C_6H_6). Mp 154-156°. $[\alpha]_D^{30}$ 0 (c, 0.8 in $CHCl_3$). Isol. as a mixt. of C-24 epimers.



3-Ketone:
$C_{30}H_{50}O_3$ 458.723
Constit. of *Artocarpus heterophyllus* (jackfruit). Cryst. Mp 142-144°. $[\alpha]_D$ +17 (c, 0.36 in $CHCl_3$). Isol. as a mixt. of C-24 epimers.

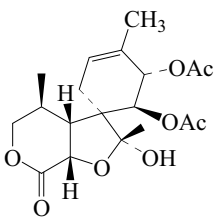
Cyclocalopin A C-436

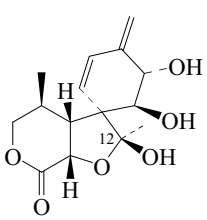


Relative Configuration

$C_{15}H_{20}O_6$ 296.319
Bitter principle isol. from *Boletus calopus* and other *Boletus* spp.. Cryst. Mp 165°. $[\alpha]_D^{25}$ -34.5 (c, 0.2 in $CHCl_3$). λ_{max} 211 (log ϵ 2.57); 243 (log ϵ 2.8) (EtOH). λ_{max} 200 (log ϵ 2.51); 241 (log ϵ 2.65) (MeCN).

7-Ac: O-*Acetylcyclocalopin A*
$C_{17}H_{22}O_7$ 338.357
Major bitter principle from *Boletus calopus* and other *Boletus* spp.. Cryst. Mp 190°. $[\alpha]_D^{25}$ -29.1 (c, 0.35 in $CHCl_3$). λ_{max} 218 (log ϵ 2.37); 273 (log ϵ 2.64) (EtOH). λ_{max} 238 (log ϵ 2.51); 332 (log ϵ 1.12) (MeCN).

Hellwig, V. *et al., Eur. J. Org. Chem.*, 2002, 2895-2904 (*isol, uv, cd, ir, pmr, cmr, cryst struct*)

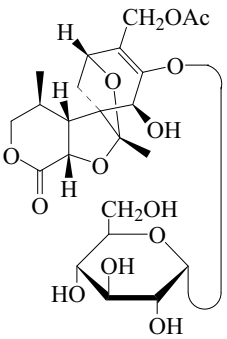


Cyclocalopin B C-437

$C_{19}H_{26}O_8$ 382.41
Isol. from *Boletus calopus* and other *Boletus* spp.. Oil. $[\alpha]_D^{33}$ +18.7 (c, 0.1 in $CHCl_3$). λ_{max} 201 (log ϵ 3.09) (MeCN).

Hellwig, V. *et al., Eur. J. Org. Chem.*, 2002, 2895-2904 (*isol, cd, pmr, cmr, ms*)

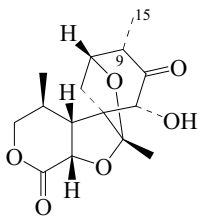
Cyclocalopin C_1 C-438



$C_{15}H_{20}O_6$ 296.319
Isol. from *Boletus radicans*. Oil. $[\alpha]_D^{33}$ +168.6 (c, 0.12 in $CHCl_3$). Obt. as a 2:1 mixt. with Cyclocalopin C_2 to which the data refers λ_{max} 228 (log ϵ 3.18); 240 (sh) (log ϵ 2.94) (MeCN).

12-Epimer: ***Cyclocalopin C₂***
$C_{15}H_{20}O_6$ 296.319
Isol. from *Boletus radicans*.

Hellwig, V. *et al., Eur. J. Org. Chem.*, 2002, 2895-2904 (*isol, pmr, cmr, ms*)

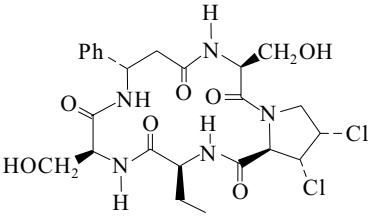


Cyclocalopin D C-439

$C_{23}H_{32}O_{13}$ 516.498
Isol. from *Boletus calopus* and other *Boletus* spp.. Cryst. Mp 110°. $[\alpha]_D^{25}$ +109.7 (c, 0.26 in MeOH). λ_{max} 212 (log ϵ 3.01); 244 (log ϵ 1.91) (MeOH).

Hellwig, V. *et al., Eur. J. Org. Chem.*, 2002, 2895-2904 (*isol, cd, ir, pmr, cmr, ms*)

Cyclocalopin E C-440



$C_{15}H_{20}O_6$ 296.319
Isol. from *Boletus calopus* and other *Boletus* spp.. Cryst. Mp 183°. $[\alpha]_D^{33}$ +38 (c, 1.1 in MeCN). λ_{max} 226 (sh) (log ϵ 2.19); 283 (log ϵ 1.9) (MeCN).

9,15-Didehydro: ***Cyclocalopin F***
$C_{15}H_{18}O_6$ 294.304
Isol. from *Boletus calopus* and other *Boletus* spp.. Obt. as a mixt. with Cyclocalopin E.

Hellwig, V. *et al., Eur. J. Org. Chem.*, 2002, 2895-2904 (*isol, cd, ir, pmr, cmr, ms*)

Cyclochlorotine C-441

[12663-46-6]
Cyclic[3-phenyl-β-alanylseryl-3,4-dichloroprolylaminobutyrylseryl], 9CI

$C_{24}H_{31}Cl_2N_5O_7$ 572.444

Mycotoxin prod. by the common food storage mould *Penicillium islandicum*. Needles (MeOH). Mp 255° dec. $[\alpha]_D^{16}$ -92.9 (MeOH). Similar chemical and biological characteristics to Islanditoxin, I-66 λ_{max} 250 (ϵ 4550); 257 (ϵ 5000); 265 (ϵ 4670) (EtOH) (Derep).

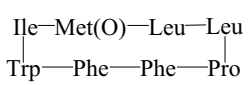
Cyclolinopeptide B C-478

[193139-41-2]



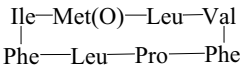
$C_{56}H_{83}N_9O_9S$ 1058.393
Cyclic peptide. Constit. of flax (*Linum usitatissimum*). Powder. $[\alpha]_D$ -104.1 (c, 0.2 in MeOH). λ_{max} 218 (ϵ 10050); 267 (ϵ 250) (MeOH).

S-*Oxide:* ***Cyclolinopeptide C***
$C_{56}H_{83}N_9O_{10}S$ 1074.392
Constit. of flax (*Linum usitatissimum*). Powder. $[\alpha]_D$ -109.7 (c, 0.21 in MeOH). λ_{max} 218 (ϵ 11000); 268 (ϵ 245) (MeOH).

Morita, H. *et al., Tetrahedron*, 1999, **55**, 967-976 (*isol, uv, ir, pmr, cmr, activity*)
Matsumoto, T. *et al., Tetrahedron*, 2002, **58**, 5135-5140 (*cryst struct, conformn*)

Cyclolinopeptide D C-479

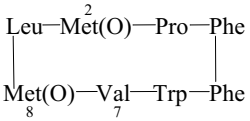
[222527-66-4]



$C_{57}H_{77}N_9O_9S$ 1064.356
Cyclic peptide. Constit. of *Linum usitatissimum* (flax). Powder. $[\alpha]_D$ -75 (c, 0.2 in MeOH). λ_{max} 229 (ϵ 10070); 280 (ϵ 4630) (MeOH).

Morita, H. *et al., Tetrahedron*, 1999, **55**, 967-976 (*isol, uv, pmr, cmr*)

Cyclolinopeptide E C-480



[222527-67-5]

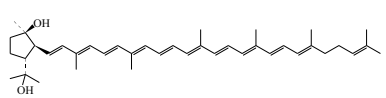
$C_{51}H_{76}N_8O_9S$ 977.276
Cyclic peptide. Incorrect MF in the ref.. Constit. of *Linum usitatissimum* (flax). Powder. $[\alpha]_D$ -75.5 (c, 0.2 in MeOH). λ_{max} 218 (ϵ 8690); 267 (ϵ 300) (MeOH).

Morita, H. *et al., Tetrahedron*, 1999, **55**, 967-976 (*isol, uv, pmr, cmr*)

Cyclolinopeptide F C-481

$C_{55}H_{73}N_9O_{10}S_2$ 1084.368
Constit. of the seeds of *Linum usitatissimum* (flax). Powder. $[\alpha]_D$ -71.4 (c, 0.21 in MeOH). λ_{max} 228 (log ϵ 4.02); 280 (log ϵ 3.65) (MeOH).

7-L-Isoleucine analogue: ***Cyclolinopeptide G***
$C_{56}H_{75}N_9O_{10}S_2$ 1098.395
Constit. of the seeds of *Linum usitatissimum* (flax). Powder. $[\alpha]_D$ -66.6 (c, 0.2 in MeOH). λ_{max} 219 (log ϵ 3.96); 281 (log ϵ 3.65) (MeOH).



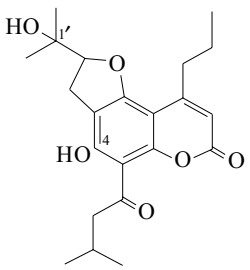
8-L-Methionine analogue: ***Cyclolinopeptide I***
$C_{55}H_{73}N_9O_9S_2$ 1068.369
Constit. of the seeds of *Linum usitatissimum* (flax). Powder. $[\alpha]_D$ -60.6 (c, 0.2 in MeOH). λ_{max} 228 (log ϵ 4); 281 (log ϵ 3.65) (MeOH).

2-L-Methionine, 7-L-isoleucine analogue:- ***Cyclolinopeptide H***
$C_{56}H_{75}N_9O_9S_2$ 1082.395
Constit. of the seeds of *Linum usitatissimum* (flax). Powder. $[\alpha]_D$ -87.7 (c, 0.15 in MeOH). λ_{max} 229 (log ϵ 3.94); 281 (log ϵ 3.62) (MeOH).

Matsumoto, T. *et al., Phytochemistry*, 2001, **57**, 251-260

2,6-Cyclolycopene-1,5-diol C-482

2-(3,7,12,16,20,24-Hexamethyl-1,3,5,7,9,11,13,15,17,19,23-pentacosaundecaenyl)-3-hydroxy-α,α,3-trimethylcyclopentanemethanol, 9CI. 1,5-Dihydroxyiridanyllycopene



$C_{40}H_{58}O_2$ 570.897
(1R,2S,3R)-form [189131-36-0]

[189131-37-1]
Cryst. (hexane). Mp 78° dec.

Khachik, F. *et al., Anal. Chem.*, 1992, **64**, 2111-2122; 1997, **69**, 1873-1881 (*detn, hplc, uv*)

8-Daucen-5-ol D-25

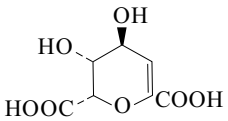
$C_{15}H_{26}O$ 222.37

5β-*form* [465-28-1]

Carotol

Constit. of *Daucus carota* (carrot). Oil. $Bp_{2.5}$ 126°. $[\alpha]_D^{20}$ +29.6.

Levisalles, J. *et al., Bull. Soc. Chim. Fr.*, 1967, 2059 (*stereochem*)



de Broissia, H. *et al., Bull. Soc. Chim. Fr.*, 1972, 4314 (*synth*)

Bülow, N. *et al., Phytochemistry*, 2000, **55**, 141-168 (*isol, pmr, cmr*)

Daucic acid D-26

[34098-52-7]

2,6-Anhydro-3-deoxy-D-xylo-*hept-2-enaric acid, 9CI*

$C_7H_8O_7$ 204.136

Free acid not obt. pure. Found in wheat, sugar beet and sunflower.

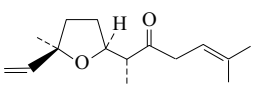
Di-Me ester: [33573-25-0]

Cryst. (EtOAc/petrol). Mp 130-131°. $[\alpha]_D^{24.5}$ -102 (c, 0.9 in Me_2CO).

Barton, D.H.R. *et al., J.C.S. Perkin 1*, 1975, 2069 (*struct, spectra*)

Daucine D-27

$C_{11}H_{18}N_2$ 178.277



Struct. unknown. Alkaloid from the leaves of *Daucus carota* (carrot). Oil. Bp 240-250°. $[\alpha]_D$ +7.74 (c, 0.645 in Et_2O).

Pictet, A. *et al., Ber.*, 1907, **40**, 3771 (*isol*)

Davanone D-28

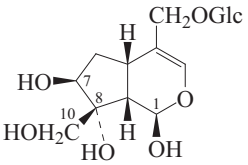
[30810-99-2]

2-(5-Ethenyltetrahydro-5-methyl-2-furanyl)-6-methyl-5-hepten-3-one, 9CI

Absolute configuration

$C_{15}H_{24}O_2$ 236.353

Main component of davana oil from *Artemisia pallens*. Davana oil used in food flavouring. $[\alpha]_D^{21}$ +77.7 (neat).



Thomas, A.F. *et al., Helv. Chim. Acta*, 1974, **57**, 2055 (*isol, struct*)

Bartlett, P.A. *et al., Tet. Lett.*, 1983, **24**, 1365 (*synth*)

Honda, Y. *et al., Chem. Lett.*, 1987, 1259-1262 (*synth*)

Molander, G.A. *et al., Tetrahedron*, 1999, 617-624 (*synth*)

Deacylsuspensolide D-29

$C_{16}H_{26}O_{11}$ 394.375

1-O-(3-Methylbutanoyl): [64703-86-2]

Suspensolide F. Kanokoside B

$C_{21}H_{34}O_{12}$ 478.492

Isol. from valerian root. Amorph. powder. Mp 110-111° (as hexa-Ac). $[\alpha]_D$ -25 (c, 0.053 in MeOH).

Endo, T. *et al., Chem. Pharm. Bull.*, 1977, **25**, 2140 (*isol, Suspensolides*)

Iwagawa, T. *et al., Phytochemistry*, 1990, **29**, 310 (*isol, pmr, cmr, Suspensolides*)

2,4-Decadienal D-30

[2363-88-4]

$H_3C(CH_2)_4CH{=}CHCH{=}CHCHO$

$C_{10}H_{16}O$ 152.236

(*E,E*)-*form* [25152-84-5]

FEMA 3135

Present in apple, bitter orange peel oil, mandarin peel oil, wheat bread, cooked beef, raw cured pork, cooked scented rice, quince, maize, dried bonito, clary sage (*Salvia sclarea*), water yam (*Dioscerea alata*) melon and peas. Flavouring agent. Oily liq. with grapefruit/orange-like taste on dilution. $Bp_{0.05}$ 58-61°.

► HD3000000

Semicarbazone:

Mp 181-182°.

2,4-Dinitrophenylhydrazone:

Mp 141-142°.

4R,5R-Epoxide: [134454-31-2]

[73528-44-6] *3-(3-Pentyloxiranyl)-2-propenal, 9CI. 4,5-Epoxy-2-decenal*

$C_{10}H_{16}O_2$ 168.235

Lipid peroxidation prod. Contributor to warmed-over flavour development in cooked meats and off-flavour in stored soybean oil. Also present in breadcrumb, hop cone and roasted sesame seed odours and pastry products prepared from margarine. Liq. with green hay-like/metallic odour. Odour threshold 0.5 pg/L in air, 1.3 µg/kg in sunflower oil.

(2*E*,4*Z*)-*form* [25152-83-4]

Constit. of numerous plants and food sources. $Bp_{0.05}$ 58-61°.

Aldrich Library of NMR Spectra, 2nd edn., 1983, **1**, 364B (*nmr*)

Aldrich Library of FT-IR Spectra: Vapor Phase, 1989, **3**, 566A (*ir*)

2,4-Decadienoic acid D-32

[92015-76-4]

$H_3C(CH_2)_4CH{=}CHCH{=}CHCOOH$

$C_{10}H_{16}O_2$ 168.235

(*E,E*)-*form* [30361-33-2]

Mp 49-50°. $Bp_{0.3}$ 121-124°.

Pyrrolidide: [78910-33-5] *1-(1-Oxo-2,4-decadienyl)pyrrolidine, 9CI. 2,4-Decadienoic acid pyrrolidide. 1-(2,4-Decadienoyl)pyrrolidine.* ***Sarmentine***

$C_{14}H_{23}NO$ 221.342

Constit. of fruits of pepper (*Piper nigrum*) and cha-plu (*Piper sarmentosum*) (Piperaceae). Oil.

(2*E*,4*Z*)-*form* [544-48-9]

Phycodioic acid. Stillingic acid

$Bp_{0.5}$ 122°.

Me ester: [4493-42-9] *FEMA 3859*

Found in pears and spineless monkey orange. Flavour for candies etc. Liq. with pear/lemon odour. $Bp_{0.15}$ 71°.

Et ester: [3025-30-7] *Pear ester. FEMA 3148*

Constit. of odoriferous principle of Bartlett pears. Also present in fresh apple, *Vitis* spp., quince and spineless monkey orange (*Strychnos madagasc*). Flavouring agent. $Bp_{0.05}$ 84-86°.

► HD3510900

Propyl ester:

[84788-08-9] *Propyl 2,4-decadienoate. FEMA 3648*

$C_{13}H_{22}O_2$ 210.316

Flavouring ingredient with a Bartlett pear flavour. Coml. product comprises 57% of the (2*E*,4*Z*)-isomer, 35% of the (2*E*,4*E*)-isomer, and 9% other esters.

(2*Z*,4*E*)-*form* [68676-77-7]

$Bp_{0.45}$ 112-114°.

Et ester:
Flavouring material.

Decanoic acid D-41

[334-48-5]
Capric acid. Caprinic acid. Decylic acid. Decoic acid (obsol.). FEMA 2364

$H_3C(CH_2)_8COOH$

$C_{10}H_{20}O_2$ 172.267
Widespread in plant oils and as glycerides in seed oils. Also present in apple, apricot, banana, morello cherry, citrus fruits, cheese, butter, white wine, Japanese whiskey, peated malt, wort and scallops. Used as a defoamer, lubricant and citrus fruit coating. Salts (Na, K, Mg, Ca, Al) used as binders, emulsifiers and anticaking agents in food manuf.. Needles. Sol. EtOH, Et_2O, Me_2CO, C_6H_6, $CHCl_3$, alkalis; poorly sol. H_2O. d_{40}^{4} 0.89. Mp 31.5°. Bp 268-270° Bp_{11} 148-150°. n_D^{40} 1.4288.

▶ Fl. p. >66°. Skin irritant. LD_{50} (mus, ivn) 129 mg/kg. HD9100000

Me ester: [110-42-9] *Methyl decanoate. Methyl caprate*
$C_{11}H_{22}O_2$ 186.294
Constit. of many plants. Liq. Bp 224° Bp_{15} 114°.

▶ HD9830000

Et ester: [110-38-3] *Ethyl decanoate. Ethyl caprate. FEMA 2432*
$C_{12}H_{24}O_2$ 200.32
Present in sweet and sour cherry, pineapple, blackberry, plum, quince, cape gooseberry, pawpaw, crispbread, wines, spirits, cerimon (*Monstera deliciosa*) and roasted filbert. Flavouring agent. Liq. with fruity odour. $d_4^{15.5}$ 0.87. Bp 243-245° Bp_{13} 122-124°. n_D^{20} 1.4260.

▶ Fl. p. >100°. Skin irritant. HD9420000

Pentyl ester: [5933-87-9] *Pentyl decanoate. Amyl caprate*
$C_{15}H_{30}O_2$ 242.401
Flavouring ingredient.

3-Methylbutyl ester: [2306-91-4] *3-Methylbutyl decanoate. Isoamyl caprate*
$C_{15}H_{30}O_2$ 242.401
Food flavouring. d 0.86. Bp 282°.

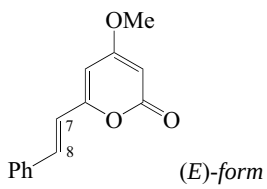
Dehydroguaiaretic acid D-71

[20601-86-9]
8-(4-Hydroxy-3-methoxyphenyl)-3-methoxy-6,7-dimethyl-2-naphthol. 4,4′-Dihydroxy-3′,5-dimethoxy-2,7′-cycloligna-7,7′-diene

$C_{20}H_{20}O_4$ 324.376
Gum.

Di-Et ether:
Prisms (EtOAc). Mp 162-163°.



7α,8β-Dihydro: [135962-21-9]

[180470-31-9] ***1,2-Dihydrodehydroguaiaretic acid***. *4,4′-Dihydroxy-3,3′-dimethoxy-2,7′-cyclolign-7-ene. Myrisfragransin*
$C_{20}H_{22}O_4$ 326.391
Constit. of *Myristica fragrans* (nutmeg). Gum. $[\alpha]_D^{25}$ +39.95 (c, 0.39 in $CHCl_3$).

King, F.E. *et al., J.C.S.*, 1964, 4011 (*isol, uv, synth*)

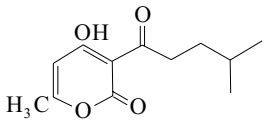
Dextrin, 9CI, 8CI, BAN D-101

[9004-53-9]
Icodextrin, BAN. Adept. AmylinStarch gum. British gum. Amylodextrin. Dextrid. Icodial. Starch gum

$(C_6H_{10}O_5)_n.xH_2O$. A mixture of polymerised glucosans. Gives a reddish-brown colour with iodine and does not reduce Fehling's soln. Commercial dextrin is less pure and usually contains sol. starch and glucose. Treatment with dil. acids gives maltose and finally glucose.. Binder, colloid stabiliser and other uses in food, oral dietary supplement. Approved for clinical use in the European Union (1999). White or yellow, amorph. powder. Insol. EtOH, Et_2O; sol. in boiling water to give a gummy soln.

▶ HH9450000



Mixt. with iron(III) hydroxide: [8063-26-1] ***Dextriferron, BAN, INN***. *Astrafer. Haemigron*

2-Butyl-4-methyloxazole, 9CI [24667-15-0]
$C_8H_{18}NO$ 144.236
Sweet, spicy, nutmeg, butter-like odour. Characterised spectroscopically.

4-Butyl-2-methyloxazole, 9CI [84027-87-2]
$C_8H_{13}NO$ 139.197
Constit. of roasted peanut and French fried potato aroma. Green, floral odour. Characterised spectroscopically.

2-Methyl-4-pentyloxazole, 9CI [102586-52-7]
$C_9H_{15}NO$ 153.224
Constit. of French fries. Characterised spectroscopically.

4-Methyl-2-pentyloxazole, 9CI [52713-58-3]
$C_9H_{15}NO$ 153.224
Volatile constit. of French fried potato. Liq. with very sweet, herbal odour. Bp_{22} 88°. n_D^{20} 1.4452.

2,4-Dipropyloxazole [84027-95-2]
$C_9H_{15}NO$ 153.224
Acidic, green, spicy, cheesy odour. Characterised spectroscopically.

2-Butyl-4-propyloxazole, 9CI [84028-04-6]
$C_{10}H_{17}NO$ 167.25Characterised spectroscopically.

4-Butyl-2-propyloxazole, 9CI [84028-01-3]
$C_{10}H_{17}NO$ 167.25Characterised spectroscopically.

2-Pentyl-4-propyloxazole, 9CI [94794-10-2]
$C_{11}H_{19}NO$ 181.277
Sweet, sl. herbal, acidic odour. No phys. props. reported.

4-Pentyl-2-propyloxazole, 9CI [84028-12-6]
$C_{11}H_{19}NO$ 181.277Characterised spectroscopically.

4-Butyl-2-pentyloxazole, 9CI [84028-18-2]
$C_{12}H_{21}NO$ 195.304
Cocoa, sweet, nutty odour. Characterised spectroscopically.

4-Methyl-2-octyloxazole, 9CI [84028-23-9]

$C_{12}H_{21}NO$ 195.304
Waxy, shortening-like, sl. sweet odour. No phys. props. reported.

4-Ethyl-2-hexyloxazole, 9CI [84028-15-9]
$C_{11}H_{19}NO$ 181.277
Fatty, sweet, sl. floral odour. Characterised spectroscopically.

4-Ethyl-2-heptyloxazole, 9CI [84028-22-8]
$C_{12}H_{21}NO$ 195.304
Weak herbal odour. Characterised spectroscopically.

2-Hexyl-4-methyloxazole [84028-07-9]
$C_{10}H_{17}NO$ 167.25
Very sweet, floral, herbal odour. Characterised spectroscopically.

2-Hexyl-4-propyloxazole [84028-21-7]
$C_{12}H_{21}NO$ 195.304
Very fatty, deep-fat fried, little green odour. Characterised spectroscopically.

2-Heptyl-4-methyloxazole [84028-16-0]
$C_{11}H_{19}NO$ 181.277
Sweet, floral odour. Characterised spectroscopically.

2,4-Dialkylthiazoles D-110

See also 2,4-Dimethylthiazole, D-908. Maillard prods. present in cooked food volatiles.

2-Isopropyl-4-methylthiazole [15679-13-7]
4-Methyl-2-(1-methylethyl)thiazole, 9CI. FEMA 3555
$C_7H_{11}NS$ 141.237
Fruit flavour intensifier. Present in Indonesian durian fruit (*Durio zibethinus*), cocoa butter/roasted beans, red tomatoes, yeast extract, coriander seed oil and roast meats. Off-flavour component in fortified juice-containing beverages. Liq. with camphorous, nutty odour. d_4^{20} 1.01. Bp_{10} 59-62°. n_D^{20} 1.4989.

4-Isopropyl-2-methylthiazole [32272-52-9]
2-Methyl-4-(1-methylethyl)thiazole, 9CI
$C_7H_{11}NS$ 141.237
Aroma component of yeast extract.

2,4-Diethylthiazole, 9CI [32272-49-4]
$C_7H_{11}NS$ 141.237
Volatile flavour component of coffee aroma and yeast extract.

2-Butyl-4-methylthiazole, 9CI [76572-47-9]
$C_8H_{13}NS$ 155.263

4-Butyl-2-methylthiazole, 9CI [41981-69-5]
$C_8H_{13}NS$ 155.263
Claimed food uses are not well documented.

2-Ethyl-4-propylthiazole, 9CI [41981-67-3]
$C_8H_{13}NS$ 155.263
Claimed food uses are not well documented. Liq. Mp 96° (as picrate). Bp_{15} 97.5-98°.

4-Ethyl-2-propylthiazole, 9CI [41981-68-4]
$C_8H_{13}NS$ 155.263
Claimed food uses are not well documented.

4-Methyl-2-pentylthiazole, 9CI [96693-92-4]
$C_9H_{15}NS$ 169.29

2,4-Dipropylthiazole, 9CI [41981-74-2]
$C_9H_{15}NS$ 169.29
Claimed food uses are not well documented.

2-Isopropyl-4-propylthiazole [87116-69-6]
2-(1-Methylethyl)-4-propylthiazole, 9CI
$C_9H_{15}NS$ 169.29
Component of roast peanut flavour.

4-Ethyl-2-pentylthiazole, 9CI [96693-88-8]
$C_{10}H_{17}NS$ 183.317

2-Butyl-4-propylthiazole, 9CI [96693-89-9]
$C_{10}H_{17}NS$ 183.317
Claimed food uses are not well documented.

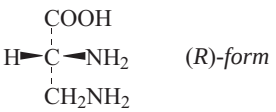
$C_6H_{14}N_2O_3$ 162.188
(2*S*,5*R*)-*form* [1190-94-9]
L-erythro-*form*
One of the natural protein-bound amino acids. Occurs free in plant tissues,

e.g. *Medicago sativa* (alfalfa). $[\alpha]_D^{25}$ +17.8 (c, 2 in 6*M* HCl).

β-D-Galactopyranoside: [32448-36-5]
$C_{12}H_{24}N_2O_8$ 324.33
Component of collagen. $[\alpha]_D^{23}$ -1.4 (c, 0.18 in MeOH).

(2*S*,5*S*)-*form* [18899-29-1]
L-threo-*form*. *L*-allo-*form*



N^6-*Ac:*
Prod. by *Beta vulgaris* (sugar beet).

[6000-08-4, 18899-30-4, 18899-31-5, 78088-29-6]

Sheehan, J.C. *et al., J.A.C.S.*, 1950, **72**, 2472-2474 (*synth*)

2,3-Diaminopropanoic acid D-119

[515-94-6]
3-Aminoalanine, 9CI

(*R*)-*form*

$C_3H_8N_2O_2$ 104.108

(*R*)-*form*
D-form

Hydrochloride (1:2):
$[\alpha]_D^{25}$ -25.2 (1*N* HCl).

N,N′-*Dibenzoyl:*
$C_{17}H_{16}N_2O_4$ 312.324
Mp 156-157°. $[\alpha]_D^{16}$ -23.9 (MeOH).

N,N′-*Dibenzoyl, Me ester:*
$C_{18}H_{18}N_2O_4$ 326.351
Mp 153-154°. $[\alpha]_D^{16}$ -21.58 (MeOH).

N,N′-*Dibenzoyl, Et ester:*
$C_{19}H_{20}N_2O_4$ 340.378
Mp 151°. $[\alpha]_D^{18}$ -13.3 (EtOH).

N^3-*Me:* [20790-80-1]
$C_4H_{10}N_2O_2$ 118.135
Mp 168°. $[\alpha]_D^{20}$ -35 (c, 1.2 in 5*M* HCl).

(*S*)-*form* [4033-39-0] *L-form*
Mp 237° dec.

Hydrochloride (1:2): [28843-13-2]
Mp 237° dec. $[\alpha]_D^{25}$ +25.2 (1*M* HCl).

N^3-*Ac:* [20584-70-7] *3-Acetamido-2-aminopropanoic acid. β-Acetamidoalanine*
$C_5H_{10}N_2O_3$ 146.146
$[\alpha]_D^{20}$ -81 (c, 8 in H_2O). $[\alpha]_D^{20}$ -33 (c, 4 in 6*M* HCl).

N^2-tert-*Butyloxycarbonyl:*
$C_8H_{16}N_2O_4$ 204.225
Mp 202° (197-199°).

N^3-*Me:* [15920-93-1] *2-Amino-3-(methylamino)propanoic acid*
Cryst. (as hydrochloride). Mp 168° dec. (hydrochloride). $[\alpha]_D^{25}$ +35 (c, 1.15 in 5*M* HCl).

▶ Toxic, exp. carcinogen.

N^3-*Nitro:* [58130-89-5] *(3-Nitroamino)alanine, 9CI. 2-Amino-3-nitraminopropionic acid*
$C_3H_7N_3O_4$ 149.106
Isol. from *Agaricus silvaticus* (red staining mushroom). Cryst. (EtOH aq.).

(±)-*form* [6018-54-8]
Mp 110-120° (softens at 97°). pK_{a2} 6.79; pK_{a3} 9.51 (25°, 0.1*M* KCl). Hygroscopic. Absorbs CO_2.

Hydrochloride: [54897-59-5]
Cryst. (EtOH aq.). Mp 232° dec.

Hydrobromide: [18635-45-5]
Cryst. (H_2O). Mp 235° dec.

Oxalate:
Cryst. + $2H_2O$. Mp 175-178° dec.

Tc complex: See 2,3-Diaminopropanoic acid technetium complex in *The Combined Chemical Dictionary.*

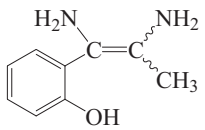
Me ester:
$C_4H_{10}N_2O_2$ 118.135
Solid (as dihydrochloride). Mp 172° (dihydrochloride).

Et ester:
$C_5H_{12}N_2O_2$ 132.162
Mp 142-144° dec.

N,N′-*Di-Ac:*
$C_7H_{12}N_2O_4$ 188.183
Mp 181-182°.

(ξ)-*form*

Nitrile, N^2-*α-L-arabinosyl,* N^3-*β-D-glucopyranoside:* [26401-22-9] *2-(Arabinosylamino)-3-(glucosylamino)propanenitrile*
$C_{14}H_{25}N_3O_9$ 379.366
Constit. of the seeds of *Lathyrus sativus* (chickling pea). Pale yellow cryst. + $1H_2O$. Tentative struct. Config. not known.



N^3-*Benzoyl:* [116480-11-6] *3-(Benzoylamino)alanine. 2-Amino-3-(benzoylamino)propanoic acid*
$C_{10}H_{12}N_2O_3$ 208.216
Sol. H_2O.

(*S*)-*form*

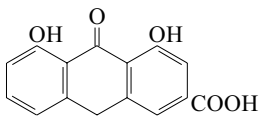
$C_6H_8O_4$ 144.127

(*S*)-*form*
Me ether: [121043-40-1] *2,3-Dihydro-3-hydroxy-5-methoxy-6-methyl-4*H*-pyran-4-one, 9CI.* ***Streptopyrone***
$C_7H_{10}O_4$ 158.154
Oil. Sol. MeOH, EtOAc; poorly sol. H_2O. $[\alpha]_D^{25}$ +52.2 (c, 0.97 in MeOH). λ_{max} 282 (ϵ 8900) (MeOH) (Berdy).



(±)-*form*
Cryst. (Et_2O/pentane). Mp 70-72°.

(ξ)-*form*
Found in numerous cooked or stored foods such as cooked vegetables, bread crust, caramelised sugar products and dehydrated orange juice powder. Intermed. prod. in Maillard reaction; formed in non-enzymic browning reactions; synth. from aldohexoses and secondary amines. Struct. of food prod. revised in 1971.
