$ZnCl_2$

Cl_2Zn 136.295

Orthorhombic form comprises hcp Cl layers in which Zn occupy some tetrahedral holes. 3 other different cryst. forms (α, β and γ) may contain H_2O. α, β and γ have pseudo close-packed Cl with Zn in tetrahedral sites. In α- and γ-forms, anion layers have a cubic sequence, in β a four layer sequence is present. Linear in gas phase. Structure in molten phase (350-580°) with increase in temp.: Zn-Cl (1st), almost no increase; Cl-Cl (1st shell), increase in width; Zn-Zn (1st shell), decrease in width; order of underlying tetrahedra diminished at 580°. Nutrient supplement. Colourless, hygroscopic cryst. Sol. MeOH, EtOH, Et_2O, Me_2O; v. sol. H_2O (= 367 g per 100 cm^3 at 20°). Mp 290° Mp 300° Mp 318°. Bp 732°. Molten-form: viscosity much large, than many glass-forming compds; can be supercooled into glass by normal methods, with persistance of tetrahedral coord. to well above Mp; model system for studying tetrahedral-network (e.g. SiO_2) glass systems.

► OES: long-term 1 mg m^{-3} (fume); short-term 2 mg m^{-3} (fume). Eye, skin and mucous membrane irritant, can cause pulmonary oedema at high concs. (as fume). ZH1400000

Sodium borohydride, S-121
Sodium hydroxide (NaOH), S-133
Sodium thiosulfate, S-148
Sorenson's sodium phosphate, D-980

Sequestrants/chelating agents

Calcium acetate, C-36
Calcium gluconate, USAN, G-152
Calcium phosphate ($Ca(H_2PO_4)_2$), C-49
Citric acid; 1-Isopropyl ester, C-290
Citric acid; 2-Isopropyl ester, C-290
Dipotassium phosphate, D-965
Disodium ethylenediaminetetraacetate, D-979
Disodium phosphate; Dodecahydrate, D-980
Disodium phosphate, D-980
Edetate disodium, USAN, E-305
Edetate sodium, USAN, E-305
Fujiglucon, G-153
Gluconic acid; D-*form*; NH_4 salt, G-152
Graham's salt, S-136
Hexasodium metaphosphate ($P_6O_{18}^{6\ominus}$), H-239
myo-Inositol hexakis(phosphate), I-41
Metaphosphoric acid ($H_6P_6O_{18}$); Tri-Ca salt, M-237
[Nitrilotris(methylene)]trisphosphonic acid, N-64
Phosphoric acid, P-331
Potassium diphosphate ($K_4(P_2O_7)$), P-431
Potassium gluconate, G-152
Potassium triphosphate ($K_5(P_3O_{10})$), P-449
Sodium calcium edetate, BAN, INN, E-305
Sodium diphosphate ($Na_4(P_2O_7)$), S-126
Sodium gluconate, G-152
Sodium phosphate ($Na(H_2PO_4)$), S-140
Sodium phosphate (Na_3PO_4), S-141
Sodium triphosphate ($Na_5(P_3O_{10})$), S-149
2-Stearyl citrate, C-290
Tannin, T-12
L-Threaric acid, T-27

Solubilisers

Docusate sodium, BAN, INN, B-130
β-D-Fructofuranosyl α-D-glucopyranoside monooctadecanoate, 9CI, S-263
Oxirane, O-193
Polysorbate 40, S-159
Polysorbate 85, S-159
Sorbitan monolaurate, BAN, USAN, A-335

Solvents/vehicles

Acetic acid, A-23
Acetone, A-25
1,3-Butanediol, B-209
2-Butoxyethanol, B-230
Carbon dioxide, C-90
Citric acid; 1-Isopropyl ester, C-290
1,2-Dichloroethane, D-160
Dichloromethane, D-161
Ethanol, E-245
Ethyl acetate, E-259
Glycerol 1,2-diacetate; (±)-*form*, G-238
Glycerol triacetate, G-242
Glycerol trioctanoate, G-264
Glycerol triundecanoate, G-271
Glycerol, G-235
Hexane, H-226
Methanol, M-243
1,2-Propanediol, P-471
2-Propanol, P-480
Trichloroethylene, T-452
Tridodecylamine, T-495
Triethyl citrate, C-290
Water, W-2

Stabilisers

Agar, A-139
Alginic acid, A-167
2-Aminoheptanedioic acid, A-255
Ammonium alginate, A-167
Amylose, S-219
Arabinogalactan, A-393
Bentonite, B-15
Calcium acetate, C-36
Calcium alginate, A-167

Calcium chloride ($CaCl_2$), C-39
Calcium gluconate, USAN, G-152
Calcium octadecanoate, O-27
Calcium phosphate ($Ca(H_2PO_4)_2$), C-49
Calcium phosphate ($Ca(HPO_4)$), C-50
Calcium sulfate, C-54
Carrageenan, C-128
Cordycepic acid, M-66
Croscarmellose, BAN, INN, C-173
γ-Cyclodextrin, C-447
Dihydro-3-(1-octenyl)-2,5-furandione, D-335
Disodium phosphate, D-980
3-Epikatonic acid, H-664
Erythritol, E-236
4-Ethoxy-3-methoxybenzaldehyde, D-382
Ethyl cellulose, C-173
Furcelleran, F-142
Gelatin, G-71
Gellan gum, G-72
Glycerol 1,2-di-(9*Z*-octadecenoate), G-239
Glycerol 1,2-dialkanoates, G-239
Glycerol 1,2-dioctadecanoate, G-239
Guar gum, G-347
Gum arabic, A-385
Gum tragacanth, G-351

Dictionary of Food Compounds on CD-ROM

This CD-ROM allows users to search the entire contents of the Dictionary in a highly sophisticated manner. Food compounds can be searched by structure, name, CAS number, molecular formula and food use. There is a user manual and an extensive, intuitive help system.

INSTALLATION

Insert the CD in the CD-ROM drive and click on the Start button and select Run. In the command line, type D:\setup.exe (where D is your CD-ROM drive letter), then click OK. If you would like a shortcut added to your start menu (includes a shortcut to the help text, manual and introduction), check the appropriate box.

You have two installation options:

- Standard installation
  The default installation copies the program files only to your computer's hard drive. Use this option if your computer has limited hard disk space. You will need to insert the CD every time you use the *Dictionary of Food Compounds*.
- Hard disk installation
  If you would like to copy the entire database to your hard drive, please check the option Copy Database to HD. This will require approximately 125 MB of hard disk space and is the best option for computers with ample hard disk space. (Due to Windows® requirements, we recommend only using this option if you have at least 300 MB free hard disk space, otherwise system performance may be affected).

INSTALL

If you do not already have Adobe Acrobat Reader® installed on your PC, you may install it at this point to access this manual and the database introduction in PDF format.

Check that the path to your CD-ROM drive is correct and then press OK.

You will be prompted to select a folder in which to install the software. If you wish the program to be installed to the default folder C:\Dictionary of Food Compounds, just click Install Dictionary of Food Compounds. Otherwise, type a new folder location and then click Install Dictionary of Food Compounds.
