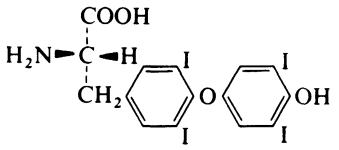
Thyrotrophin, BAN, INN T-00232

Thyrotropic hormone, 9CI. Thyrotropin. Pretiron. Thytropar. Thyroid-stimulating hormone. Thyreotrophic hormone. TSH. TTH

[9002-71-5]



Bovine TSH consists of 2 chains; TSH-α (with 96 amino acid residues and MW ~13,600) and TSH-β (containing 112-113 residues, MW ~14,700). TSH-α contains two oligosaccharide moieties, TSH-β one. Prod. by the anterior lobe of the pituitary gland. Appears to be essential for the correct functioning of the thyroid gland. Stimulates the production of thyroxine. Biological activity is destroyed by heating and by proteolysis with pepsin, trypsin and chymotrypsin. Also inactivated by oxidising agents, e.g. $KMnO_4$, I_2.

Name Index

The Name Index lists in alphabetical order all names and synonyms contained in the Dictionary.

Each index term refers the user to a Dictionary Number consisting of a single letter of the alphabet followed by five digits. The letter is the first letter of the relevant Dictionary Name.

A Dictionary Number which follows immediately upon an index term means that the term is itself used as the Entry Name.

A Dictionary Number which is preceded by the word '*see*' means that the term is a synonym to an Entry Name.

A Dictionary Number which is preceded by the word '*in*' means that the term is embedded within an Entry, usually as a synonym to a particular stereoisomeric form or to a derivative.

The symbol ▷ preceding an index term indicates that the Dictionary Entry contains information on toxic or hazardous properties of the compound.
