Caution

Treat all organic compounds as if they have dangerous properties.

The publisher makes no representation, express or implied, with regard to the accuracy of the information contained in this Dictionary, and cannot accept any legal responsibility or liability for any errors or omissions that may be made.

The specific information in this publication on the hazardous and toxic properties of certain compounds is included to alert the reader to possible dangers associated with the use of those compounds. The absence of such information should not however be taken as an indication of safety in use or misuse.

Preface

The constant search for new drugs and the continuous development of existing products has resulted in an ever-increasing amount of information available to the chemist working in this area. The aim of this Dictionary is to provide the definitive source of concise, easily accessed factual data on all of the most significant drugs currently in use or late development worldwide.

The term 'drug' is generally taken to mean a substance approved for clinical use by some regulatory body; for this Dictionary the term has been extended to include compounds of significant pharmacological interest which are either in the process of gaining clinical approval or which are no longer in widespread clinical use. For those compounds currently in clinical use we have included all those drugs to be found in the most recent editions of generic name listings (*US Adopted Names 1989*, *International Nonproprietary Names Volume 7* and *British Approved Names 1986*, *Suppl. 6*). Also included within the scope of the Dictionary are a number of biologically active compounds of plant origin which have been used in folk medicine. We have not included pesticides or pharmacologically inactive substances used in the preparation of pharmaceutical products.

Some of the entries in this Dictionary are based on the Fifth Edition of the *Dictionary of Organic Compounds* (1982) and its supplements. These entries have been substantially updated and the coverage extended to include a large number of references to biological activity. Where possible cross-references have been made to works providing further pharmacological and clinical information such as *Martindale's Extra Pharmacopoeia*. Much of the physical property data contained in this work has been taken from the patent literature, frequently the only information source for newly-developed drugs.

With a work of this nature some omissions are inevitable, but it is hoped that these have been kept to a minimum. We expect to produce supplements or new editions to this Dictionary and so users are encouraged to express their comments or suggestions for inclusion to the Editor or Publishers.

The original Editor of this Dictionary was Dr Joseph Elks, formerly of Glaxo Group research, who began work on it in 1985. It is a matter of deep regret that Dr Elks died in November 1988 and was unable to see the results of his labours. The editorial function was taken over by C.R.G. supported by the three Editorial Advisors, and we wish to acknowledge with grateful thanks and remembrance the work which Joe Elks carried out on the project by the time of his death.

Introduction

1. Using the Dictionary

The Dictionary is arranged alphabetically by entry name. Every entry is numbered to assist ready location. Many drugs are included as derivatives of main entry compounds; the extensive indexing of the Dictionary means that these can be readily located through the Name, Molecular Formula or Type of Compound indexes.

Indexes

There are five printed indexes which are located in the separate Index Volume. These are:

Name Index. This lists every name given throughout the Dictionary, whether it refers to an entry, stereoisomer or derivative, and including some names embedded in the text of entries.

Molecular Formula Index. This lists all molecular formulae given in the Dictionary in Hill convention order. Molecular formulae are reported for all drugs but not normally for derivatives such as hydrates or salts of neutral compounds. Cationic compounds are given a molecular formula which is that of the cation and the various salts are listed as derivatives, together with their molecular formulae.

CAS Registry Number Index. Lists all CAS (Chemical Abstracts Service) Registry numbers given throughout the Dictionary.

Type of Compound Index. This valuable index classifies all drugs included in the Dictionary under one or more of approximately 200 headings based principally on pharmacological activity, but also including some headings related to compound types (e.g. peptides, enzymes, tetracycline antibiotics). A full list of the headings used in the Index is given at the beginning of the Index.

Structure Index. This index provides reduced size structural formulae of all compounds in entry number order, facilitating the rapid skimming of Dictionary contents when searching for structurally-related drugs.

2. Chemical Names and Synonyms

The Dictionary contains a wide range of synonyms which may be (*a*) those found in the primary literature, (*b*) *Chemical Abstracts* names (these are omitted when they are excessively long), (*c*) a small proportion of names added editorially to achieve as much consistency as possible, or (*d*) tradenames used by pharmaceutical companies. Proprietary ownership of drug names is not indicated, and the Dictionary **should not be considered as an authoritative source on the proprietary ownership or use of these names**.

Most entries are headed by a generic name (obtained from recent editions of listings of non-proprietary names [1,2,3,]), but in some simple cases the systematic name is preferred and the entry may be found from the generic name using the Name Index. Generic names have suffixes to indicate their source (e.g. INN, BAN, USAN).

Care has been taken to include as many tradenames, company experimental codes and alternative names as possible. Most of these have been authenticated from the primary literature but in cases where this has not been possible the principal authorities are Negwer [4] and the *Merck Index* [5]. Where a common drug has a very large number of alternative names, a cross reference is given to Negwer [4] which should be consulted for the full listing.

Names corresponding to those used by CAS during the 8th and 9th Collective Index Periods (1967–1971 and 1972–1976 respectively) are labelled with the suffixes 8CI, 9CI. Names first introduced since 1976 are referred to as 9CI as there have been no substantial changes of CA nomenclature affecting organic compounds since that date.

If a compound cannot be located immediately in the main body of the entries, **it is important to use the indexes**.

3. Bibliographic References and Literature Coverage

The selection of references is made with the aim of facilitating entry into the literature for the user who wishes to locate more detailed information about a particular compound. Reference contents are indicated using suffixes.

Journal abbreviations generally follow the practice of the Chemical Abstracts Service Source Index (CASSI). In patent references, no distinction is made between patent applications and granted patents.

Wherever possible, English-language patent equivalents are quoted.

In compiling this Dictionary the primary literature has been surveyed to July 1989 and extensive reference has been made to reviews available at that time.

4. Therapeutic Uses

Practically every compound in this Dictionary has been classified according to its therapeutic use under one or more of the headings in the Type of Compound Index. Compounds which have several claimed therapeutic uses are indexed separately in each category. The assignment of drugs into such categories is based on information given in Martindale [6] or in the primary literature.

5. Hazard Information

Many drugs are highly toxic. Information on their toxicity is highlighted by the use of the symbol ▷, which also appears in the indexes (except the Structure Index). Whilst every effort has been made to alert the user to potential hazards associated with particular drugs, **the absence of such information cannot be taken as a guarantee of safety in use or misuse.** This dictionary is intended for medicinal and pharmaceutical chemists as an aid to research and is **not intended as a guide to prescription or use of drugs**. The information provided is given in good faith but the Editors cannot be held responsible for any inaccuracies therein.

6. Principal Abbreviations

[α]	specific rotation
abs config	absolute configuration
Ac	Acetyl
AcOH	Acetic acid
Ac_2O	Acetic anhydride
amorph	amorphous
anal	analytical applications, analysis or detection
aq.	aqueous
B	base
bibl.	bibliography
biosynth	biosynthesis
Bp	boiling point
BAN	British Approved Name
c	concentration
ca.	(*circa*) about
cd	circular dichroism
chromatog	chromatography
cmr	^{13}C nuclear magnetic resonance
col	colour, coloration
conc	concentrated
config	configuration
constit	constituent
compd	compound
cryst struct	X-ray crystal structure determination
d	density
dec	decomposes, decomposition
degradn	degradation
deriv(s)	derivatives
descr	described
detn	detection
dil	dilute, dilution
dimorph	dimorphic
esr	electron spin resonance
Et	Ethyl
EtOAc	Ethyl acetate
fluor	fluoresces, fluorescence
glc	gas liquid chromatography
Glc	β-D-glucopyranosyl
haz	hazard
hydrol	hydrolyses, hydrolysed, hydrolysis
INN	International Nonproprietary Name
ir	infra-red spectrum
isol	isolation
isom	isomerises, isomers
JAN	Japanese Accepted Name
LD	lethal dose: LD_{50}, a dose which is lethal to 50% of the animals tested
M	molecular weight (formula weight)
max	maximum
Me	Methyl
metab	metabolism, metabolite
misc	miscible
mixt	mixture
mod	moderately
Mp	melting point
ms	mass spectrum
n	index of refraction (e.g. n_D^{20} for 20° and sodium light)
obt	obtained
occur	occurrence
ord	optical rotatory dispersion
pet. ether	Petroleum ether (light petroleum)
Ph	Phenyl (C_6H_5)
pharmacol	pharmacology
pmr	proton (^1H) nuclear magnetic resonance
props	properties
purifn	purification
Py	Pyridine

ref	reference
resoln	resolution
rev	review
r.t.	room temperature
sl	slightly
sol	soluble
soln	solution
solv	solvent
subl	sublimation, sublimes
synth	synthesis
tautom	tautomerism
tlc	thin layer chromatography
tox	toxicity, toxicology
unsatd	unsaturated
USAN	United States Adopted Name
uv	ultraviolet spectrum
v	very
vol	volume

7. Further Information

For further information about the presentation of data in this and other Dictionaries, see the introduction to the *Dictionary of Organic Compounds*, Fifth Edition and Supplements.

[9005-32-7]

R_1 = H, R_2 = COOH
or R_1 = COOH, R_2 = H

$(C_6H_8O_6)_n$

A polymer consisting of various proportions of β-D-Mannuronic acid and α-L-Guluronic acid linked 1→4 and arranged in a block fashion. Occurs as the major matrix polysaccharide in brown seaweed (*Phaeophyceae*) as an insol. complex of K, Na, Ca and Mg alginates. Alginates are used to improve food texture, e.g. ice cream, pie fillings etc., as a tablet disintegrant and as paper coatings. Pharmaceutical aid. $[\alpha]_D$ −120° to −150° (as Na salt in H_2O).

Angiotensins A-00385

Hypertensin. Angiotonin

Angiotensin I: H-L-Asp-L-Arg-L-Val-L-Tyr-X-L-His-L-Pro-L-Phe-L-His-L-Leu-OH
Angiotensin II: H-L-Asp-L-Arg-L-Val-L-Tyr-X-L-His-L-Pro-L-Phe-OH

A group of peptide hormones formed by the action of renin, secreted from the kidney cortex, on a biologically inactive precursor, Angiotensinogen, contained in the α_2-globulin fraction of blood plasma. Angiotensin I (biologically inactive) is rapidly converted by Angiotensinase into Angiotensin II, which acts rapidly upon smooth muscle, causing hypertensive action and stimulates the release of aldosterone from the adrenal gland. Different spp. produce peptides differing of the fifth amino acid residue (valine or isoleucine); both forms show the same biological activity.

5-L-Isoleucineangiotensin I [484-42-4]
$C_{62}H_{89}N_{17}O_4$ M 1136.497

Peptide produced by the action of renin on human, horse or hog plasma globulin. Amorph. powder.

5-L-Valineangiotensin I [484-43-5]
Pepsitensin
$C_{61}H_{87}N_{17}O_{14}$ M 1282.464
Peptide produced by the action of renin or pepsin on ox plasma globulin. Amorph. powder + 1AcOH and 4 or $5H_2O$. Mp 289-290° (tetrahydrate), 220° dec. (pentahydrate). $[\alpha]_D^{22}$ −67.5° (c, 1.69 in H_2O).

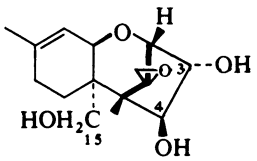
[*Asp*^{1}]*Amide:* Amorph. powder + 1AcOH and $5H_2O$. Mp 220° dec. $[\alpha]_D$ −68° (c, 1.67 in H_2O).

5-L-Isoleucineangiotensin II [4474-91-3]
$C_{50}H_{71}N_{13}O_{12}$ M 1046.191

Powder + 1AcOH. Mp 230-247° dec. $[\alpha]_D^{20}$ −66.98° (c, 0.4 in 1N HCl).

[*Asp*^{1}]*Amide:* Powder. Mp 195-205° dec. $[\alpha]_D$ −44° (c, 0.558 in H_2O).

5-L-Valineangiotensin II [58-49-1]
$C_{49}H_{69}N_{13}O_{12}$ M 1032.164



Powder + $1H_2O$ + 2AcOH. $[\alpha]_D$ −53.8° (c, 1 in H_2O).

[*Asp*^{1}]*Amide:* [53-73-6]. ***Angiotensinamide, BAN, INN.*** *Ipertensina. Hypertensin-CIBA. NSC 107678.*
$C_{49}H_{70}N_{14}O_{11}$ M 1031.179
Deriv. preferred for pharmacological and clinical investigations, showing identical activity to the parent Angiotensin. Vasoconstrictor and hypertensive agent. Powder + 1AcOH. $[\alpha]_D$ −58.0° (c, 1 in H_2O).

Used in perfumery and flavourings. Liq. d_{25}^{25} 1.09. Fp −12.3°. Bp 199.6°, Bp_{24} 96-98°.

▷DH3850000.

Et ester: [93-89-0]. *Ethyl benzoate.*
$C_9H_{10}O_2$ M 150.177

Polymerisation catalyst. Used in perfumery and flavourings. Liq. d_4^{25} 1.04. Fp −34°. Bp 212.9°, Bp_{10} 87.2°.

▷Mod. toxic. DH0200000.

Propyl ester: [2315-68-6]. *Propyl benzoate.*
$C_{10}H_{12}O_2$ M 164.204
Flavour ingredient. d_{15}^{15} 1.03. Bp 230°.

Isopropyl ester: [939-48-0]. *Isopropyl benzoate.*
Polymerisation catalyst, flavour ingredient. d_{15}^{15} 1.02. Bp 218-219°.

▷DH3150000.

Butyl ester: [136-60-7]. *Butyl benzoate.*
$C_{11}H_{14}O_2$ M 178.230
Dye carrier; used in perfumery. d_{15}^{15} 1.01. Bp 248-249°.

▷DG4925000.

tert-Butyl ester: [774-65-2]. tert-*Butyl benzoate.*
$C_{11}H_{14}O_2$ M 178.230
Bp_2 96°.

Benzyl ester: [120-51-4]. ***Benzyl benzoate, USAN.*** *Ascabin. Benylate. Vanzoate. Numerous proprietary names.*
$C_{14}H_{12}O_2$ M 212.248
Contained in Peru balsam. Tobacco flavouring agent, insect repellant component. Acaricide and pediculicide. Leaflets. d^{18} 1.11. Mp 21°. Bp 323-324° (316-317°). Used in conjunction with 2,3-Dimercapto-1-propanol, D-00385 .

▷Mod. toxic. DG4200000.

Fluoride: [455-32-3]. *Benzoyl fluoride.*
C_7H_5FO M 124.114
Fuming liq. Bp 159-161°. Hydrolysed by hot H_2O.

Chloride: [98-88-4]. *Benzoyl chloride.*
C_7H_5ClO M 140.569
Polymerisation catalyst, benzoylating agent. Can be used for synth. of aliphatic acid chlorides. Fuming liq. d_{15}^{15} 1.22. Fp −1°. Bp 197°.

▷Highly irritant, causes burns, violent reaction with dimethyl sulphoxide. DM6600000.

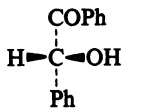
Bromide: [618-32-6]. *Benzoyl bromide.*
C_7H_5BrO M 185.020
Fuming liq. d^{15} 1.57. Fp −24°. Bp 218-219°, $Bp_{0.05}$ 48-50°.

Iodide: [618-38-2]. *Benzoyl iodide.*
C_7H_5IO M 232.020
Needles. Mp 3°. Bp_{20} 128°.

Anhydride: [93-97-0]. *Benzoic anhydride.*
$C_{14}H_{10}O_3$ M 226.231
Cross-linking agent for polymers. Acylation and decarboxylating agent, can be used in polymer-linked form. Rhombic prisms. d_4^{15} 1.99. Mp 42°. Bp 360°.

▷Mild irritant and allergen

Azide: Benzazide. Benzoylazimide.
$C_7H_5N_3O$ M 147.136
Plates. Mp 32°.



▷Explodes on heating

Bleomycin A_1 B-00242

N'-[3-(Methylsulfinyl)propyl]bleomycinamide, 9CI

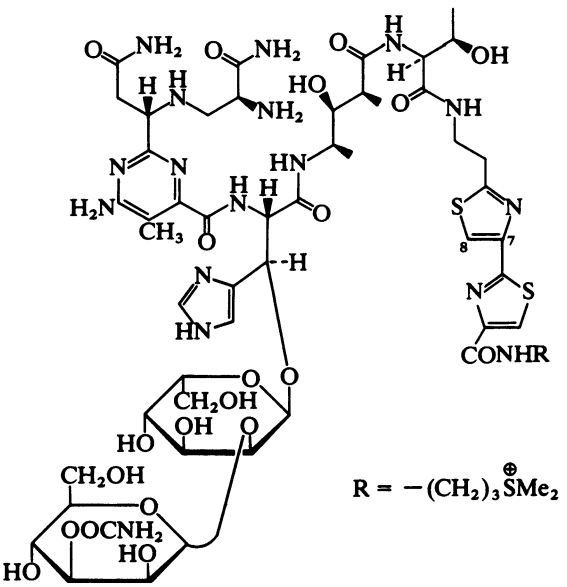
[58995-26-9]

As Bleomycin A_2, B-00243 with

R = $-(CH_2)_3SOCH_3$

$C_{54}H_{78}N_{16}O_{22}S_3$ M 1399.484

Glycopeptide antibiotic. Isol. from *Streptomyces verticillus*. Antitumour agent. See also Bleomycin A_2 for general refs.



▷EC5991600.

Fujii, A. *et al*, *J. Antibiot.*, 1973, **26**, 396, 398; 1978, **31**, 801 (*isol, props*)

Bleomycin A_2 B-00243

N^1-[*3-(Dimethylsulfonio)propyl*]*bleomycinamide*, *9CI. Zhengguangmycin* A_2

[11116-31-7]

$C_{55}H_{81}N_{17}O_{21}S_3^{\oplus}$ M 1412.526 (ion)

Major component of the large Bleomycin complex of glycopeptide antibiotics. Bleomycin complex isol. from *Streptomyces verticillus*. Semisynthetic members are prod. by directed biosynth. or semisynth. Important antitumour agent claimed for clinical use against specific tumours. Active against gram-positive and -negative bacteria. Mol. formula incorrect in CA (N_{16}).

▷EC5988500.

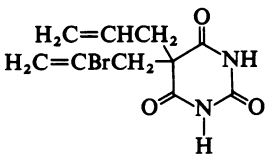
Bradykinins B-00264

Kallidins

X-Arg-Pro-Pro-Gly-Phe-Ser-Pro-Phe-Arg-OH,
Bradykinin: X = H, Kallidin II: X = H-Lys



Kallidin I [58-82-2]
Bradykynin, 9CI. BRS 640
$C_{50}H_{73}N_{15}O_{11}$ M 1060.221
A tissue hormone which produces all four cardinal symptoms of inflammatory response, i.e. vasodilation, increased capillary permeability, pain and the accumulation of leucocytes. Amorph. Mp 170° dec. $[\alpha]_D^{23}$ −60.2° (c, 0.9 in MeOH), $[\alpha]_D^{25}$ −78.4° (c, 1.4 in 1N AcOH).
▷EE1530000.

Kallidin II [342-10-9]
N^2-*L-Lysylbradykinin, 9CI. Kallidin*
$C_{56}H_{85}N_{17}O_{12}$ M 1188.394
Peptide producing the signs of inflammatory response. Amorph.

Capreomycin, BAN, INN C-00031

Capromycin. Caprolin. Capastat. Capostatin. L 29275

[11003-38-6]

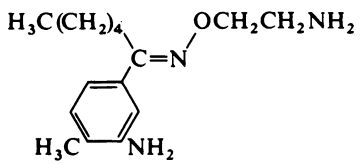
Capreomycin IA R^1 = OH, R^2 = —NHCOCH$_2$CH(NH$_2$)(CH$_2$)$_3$NH$_2$
IB R^1 = H, R^2 = —NHCOCH$_2$CH(NH$_2$)(CH$_2$)$_3$NH$_2$
IIA R^1 = OH, R^2 = H
IIB R^1 = R^2 = H

Capreomycin is a mixt. of four cyclic peptides, Capreomycins IA (25%), IB (67%), IIA (3%) and IIB (6%). Isol. from *Streptomyces capreolus*. Clinically used tuberculostat.

Disulfate: Caprocin. Ogostal. Capreomycin sulfate, USAN.

Capreomycin IA [37280-35-6]
$C_{25}H_{44}N_{14}O_8$ M 668.712
Active against gram-positive and -negative bacteria and mycobacteria. Shows tuberculostatic and antitumour props.
Cryst. Mp 246-248°. $[\alpha]_D^{22}$ −22.0° (c, 0.5 in H_2O).
▷EX8926000.

Capreomycin IB [33490-33-4]
6-L-Alaninecapreomycin IA
$C_{25}H_{44}N_{14}O_7$ M 652.712
Cryst. Mp 253-255°. $[\alpha]_D^{22}$ −44.6° (c, 0.5 in H_2O).
▷EX8927000.



Capreomycin II
A mixt. of 2 subcomponents, Capreomycins IIA and IIB, not yet separated.
▷EX8928000.

Levocarnitine, INN, USAN

Constit. of striated muscle, liver and whey. Facilitator of long-chain fatty acids through mitochondrial membranes, thus allowing their metabolic oxidn. Regulator of blood lipid levels, used in sport and infant nutrition. Drug used to increase cardiac output and improve myocardial function; often administered after haemodialysis. Extremely hygroscopic solid ($EtOH/Me_2CO$). Mp 196-198°. $[\alpha]_D^{25}$ −31.3° (c, 10 in H_2O) (>99% opt. pure).

▷BP2980000.

B,HCl: Hygroscopic cryst. Mp 137-139°. $[\alpha]_D^{22}$ −20.4° (H_2O).

Me ether:

Cellulose, 9CI, 8CI C-00165

[9004-34-6]

$(C_6H_{10}O_5)_n$

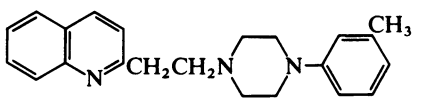
An unbranched polymer composed of 1,4 β-linked glucopyranose units. The most abundant organic material found in plants forming the principal constit. of their cell walls giving them structural strength. Cotton is almost pure cellulose. Wood is the most important industrial source. Basic material for textile and paper manuf. Insol. H_2O, most solvs., but forms sol. complexes in conc. aq. $ZnCl_2$, copper-amine solutions and with Fe sodium tartrate solution.

Ac: [9004-35-7]. *Cellulose acetate.* Used in manuf. of photographic film, gramophone discs, lacquers and fibres.

Nitrate: [9004-70-0]. *Nitrocellulose.* Used in explosives (propellants), lacquers, adhesives, plastics (e.g. Celluloid).

▷QW0975180.

Xanthate: [9032-37-5]. *Cellulose xanthate.* Used in manuf. of viscose rayon.



Per-Me: Methyl cellulose. Defoamer, adhesive, thickener, nontoxic food additive and veterinary laxative.

Cephaeline C-00172

7',10,11-Trimethoxyemetan-6'-ol, 9CI. Desmethylemetine. Dihydropsychotrine

$C_{28}H_{38}N_2O_4$ M 466.619

(−)-form [483-17-0]

Alkaloid from *Alangium lamarckii, A. salviifolium, Psychotria granadensis, P. ipecacuanha* and *Cephaelis acuminata* (biosynth) (Alangiaceae, Rubiaceae). Shows antitumour activity, inhibitor of RNA, DNA and protein biosynth. Emetic and expectorant. Mp 115-116° (104-107°, 110-111°). $[\alpha]_D^{25}$ −43.4° ($CHCl_3$), $[\alpha]_D$ −23.4° (c, 0.81 in $CHCl_3$).

B,HCl: Mp 254-257°. $[\alpha]_D$ +21° (H_2O).
O,N-*Di-Ac:* Mp 116°.
O-*Me: see Emetine, E-00036*
N-*Me:* [6793-51-7]. *Alamarckine.* Semisynthetic; from *N*-methylation of the total crude alkaloids of *A. lamarckii* or of Cephaeline (Alangiaceae). Cryst. (MeOH). Mp 191-192°. $[\alpha]_D$ −50.5° (c, 1.4 in $CHCl_3$).

C-1′ Epimer: [5884-45-7]. ***Isocephaeline***.
$C_{28}H_{38}N_2O_4$ M 466.619
Alkaloid from the seeds of *A. lamarckii* (Alangiaceae). Cryst. (Et_2O). Mp 116° (shrinks from 108°). $[\alpha]_D^{20}$ −69.8° ($CHCl_3$).

O^9*-De-Me:* [82570-80-7]. *9-Demethylcephaeline*. Mp 147° (sinters at 124°). $[\alpha]_D^{12}$ −55.0° (c, 0.50 in $CHCl_3$).

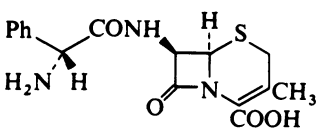
O^{10}*-De-Me:* [29700-91-2]. *10-Demethylcephaeline*. Prob. a monohydrate. Mp 148° (sinters at 129-130°). $[\alpha]_D^{17}$ −53.0° (c, 0.50 in $CHCl_3$).

O-*De-Me:* ***Demethylcephaeline***.
$C_{27}H_{36}N_2O_4$ M 452.592
Alkaloid from the stem bark of *A. lamarckii* (Alangiaceae). Amorph. Mp 147-149°. $[\alpha]_D$ −53.5° ($CHCl_3$). This is probably O^{10}-Demethylcephaeline. O^9 and O^{10}-demethylcephaelines have been synthesised (see above), but a comparison of natural and synthetic compds. could not be carried out.

(±)-*form*
Synthetic. Fine needles + $1H_2O$ (Et_2O). Mp 115-116° and 150° (double Mp).

B,HCl: Mp 258-260°.

Oxalate: Cryst. (MeOH). Mp 215-217°.



1′-Epimer: [17132-43-3]. (±)-*Isocephaeline*. Synthetic. Cryst. (Et_2O). Mp 176°.

1′-Epimer; B,2HCl: Cryst. (EtOH aq.). Mp 270°.

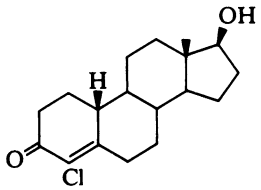
Chloroform C-00241

Trichloromethane, 9CI

[67-66-3]

$CHCl_3$



$CHCl_3$ M 119.378

Manuf. by direct chlorination of CH_4 or by reacn. of EtOH or Me_2CO with Cl_2 + NaOH. Solvent, intermediate for manuf. of $CHClF_2$, plastics intermediate. U.S. prodn. 136 000 t/a in 1976. Formerly used as anaesthetic. Liq. Spar. sol. H_2O. d_4^{25} 1.481. Mp −63.2°. Bp 61.3°. n_D^{20} 1.4467. Nonflammable. Slowly dec. in air and light forming *inter alia* $COCl_2$ (toxic). Forms hydrate with $18H_2O$, dec. at 1.6°. Forms azeotrope contg. 2.5% H_2O, Bp 56°.

▷Toxic vapour, TLV 120, eye irritant, suspected carcinogen. Vigorous reaction with Me_2CO and base, explosive reaction with some materials. FS9100000.

EC 3.4.21.1. Chymar-Zan. Chymar

[9004-07-3]

M ~25,000 (α-form)

A serine endopeptidase stored as zymogen in granules of pancreatic β-cells of mammals. Catalyses the hydrol. of amide (and ester) bonds of peptides and proteins, particularly those adjacent to the carbonyl group of hydrophobic L-amino acids. Inhibitors: natural; chymostatin, α-chymotrypsin inhibitor, soybean trypsin inhibitor. Synthetic; diisopropylfluorophosphate, chloromethyl ketones e.g. Tos-Phe CH_2Cl. pI 8.6. Optimum activity at pH 7.5.

[9002-60-2]

H-[1]Ser-Tyr-Ser-Met-Glu-His-Phe-Arg-Trp-Gly-Lys-Pro-Val-Gly-Lys-Lys-Arg-Arg-Pro-Val-Lys-Val-Tyr-Pro-Asn-Gly-Ala-Glu-Asp-Glu-Ser-Ala-Glu-Ala-Phe-Pro-Leu-Glu-[39]PheOH

$C_{207}H_{308}N_{56}O_{58}S$ M 4541.111

Struct. of human corticotropin shown. Minor differences in sequence have been identified in corticotropins from other mammalian spp. Endocrine hormone derived from pro-opiomelanotropin by proteolytic cleavage and released from the anterior lobe of the pituitary gland to cause release of several cortical hormones from the adrenal cortex. The amino terminal 1-19 sequence is necessary for corticotropic activity. Used in the clinical treatment of rheumatoid arthritis and asthma. Also used as a suspension with zinc hydroxide (Corticotropin-zinc hydroxide, INN).

Cyclosporin G [74436-00-3]
7-L-Norvalinecyclosporin A, *9CI*
$C_{63}H_{113}N_{11}O_{12}$ M 1216.652
From *T. inflatum*. Cryst. (Et_2O/pet. ether). Mp 196-197°. $[\alpha]_D^{20}$ −245° ($CHCl_3$).

Cyclosporin H [83602-39-5]
5-(N-Methyl-D-valine)cyclosporin A, *9CI*
$C_{62}H_{111}N_{11}O_{12}$ M 1202.625
From *T. inflatum*. Cryst. (Et_2O). Mp 162-165°. $[\alpha]_D^{20}$ −177° (c, 0.75 in $CHCl_3$).

Cyclosporin K
6-(6,7-Didehydro-N,4-dimethyl-L-2-aminooctanoic acid)-7-L-valinecyclosporin A
$C_{63}H_{113}N_{11}O_{11}$ M 1200.653
Amorph. Mp 127-132°. $[\alpha]_D^{20}$ −293° ($CHCl_3$).

Cyclosporin L
6-(2-Amino-3-hydroxy-4-methyl-6-octenoic acid)-cyclosporin A
$C_{61}H_{109}N_{11}O_{12}$ M 1188.599
Amorph. Mp 154-157°. $[\alpha]_D^{20}$ −292° ($CHCl_3$).

Cyclosporin M
7,10-Bis(L-norvaline)cyclosporin A
$C_{63}H_{113}N_{11}O_{12}$ M 1216.652
Cryst. (Et_2O). Mp 142-144°. $[\alpha]_D^{20}$ −211° ($CHCl_3$).

Cyclosporin N
4-L-Leucine-7-L-norvalinecyclosporin A
$C_{62}H_{111}N_{11}O_{12}$ M 1202.625
Cryst. (Et_2O). Mp 169-172°. $[\alpha]_D^{20}$ −234° ($CHCl_3$).

Cyclosporin O
6-(N-Methyl-L-leucine)-7-L-norvalinecyclosporin A
$C_{60}H_{109}N_{11}O_{11}$ M 1160.588
Cryst. (pet. ether/Et_2O). Mp 186-188°. $[\alpha]_D^{20}$ −304° ($CHCl_3$).

Cyclosporin P
6-[(2S,3R,4R,6E)-2-Amino-3-hydroxy-4-methyl-6-octenoic acid]-7-L-threoninecyclosporin A
$C_{61}H_{109}N_{11}O_{13}$ M 1204.598
Amorph. Mp 157-160°. $[\alpha]_D^{20}$ −258° ($CHCl_3$).

Cyclosporin Q
9-L-Valinecyclosporin A
$C_{60}H_{107}N_{11}O_{12}$ M 1174.572
Amorph. Mp 160-164°. $[\alpha]_D^{20}$ −247° ($CHCl_3$).

Cyclosporin R
4,11-Bis(L-leucine)cyclosporin A
$C_{60}H_{107}N_{11}O_{12}$ M 1174.572
Struct. of this component has not been confirmed.
Amorph. Mp 173-175°. $[\alpha]_D^{20}$ −175° ($CHCl_3$).

Cyclosporin S
7-L-Threonine-9-L-valinecyclosporin A
$C_{60}H_{107}N_{11}O_{13}$ M 1190.571
Amorph. Mp 174-176°. $[\alpha]_D^{20}$ −199° ($CHCl_3$).

Cyclosporin T
4-L-Leucinecyclosporin A
$C_{61}H_{109}N_{11}O_{12}$ M 1188.599
Amorph. Mp 168-171°. $[\alpha]_D^{20}$ −245° ($CHCl_3$).

Cyclosporin U
11-L-Leucinecyclosporin A
$C_{61}H_{109}N_{11}O_{12}$ M 1188.599
Amorph. Mp 177-179°. $[\alpha]_D^{20}$ −207° ($CHCl_3$).

Cyclosporin V
1-S-(2-Aminobutanoic acid)cyclosporin A
$C_{63}H_{113}N_{11}O_{12}$ M 1216.652
Cryst. (Et_2O). Mp 149-152°. $[\alpha]_D^{20}$ −225° ($CHCl_3$).

Cyclosporin W
7-L-Threonine-5-L-valinecyclosporin A
$C_{61}H_{109}N_{11}O_{13}$ M 1204.598
Amorph. Mp 150-156°. $[\alpha]_D^{20}$ −219° ($CHCl_3$).

Cyclosporin X
3-L-Leucine-7-L-norvalinecyclosporin A
$C_{62}H_{111}N_{11}O_{12}$ M 1202.625
Cryst. (Et_2O). Mp 160-163°. $[\alpha]_D^{20}$ −233° ($CHCl_3$).

Cyclosporin Y
7-L-Norvaline-11-L-leucinecyclosporin A
$C_{62}H_{111}N_{11}O_{12}$ M 1202.625
Amorph. Mp 172-175°. $[\alpha]_D^{20}$ −192° ($CHCl_3$).

Cyclosporin Z
6-[S-(2-Aminooctenoic acid)]cyclosporin A
$C_{61}H_{111}N_{11}O_{11}$ M 1174.615
Amorph. Mp 132-136°. $[\alpha]_D^{20}$ −297° ($CHCl_3$).

α-D-Glc*p*(1→6)-α-D-Glc*p*-(1→6)-α-D-Glc*p*-(1→6)-

3
↑
1

(α-D-Glc*p*)$_x$

M 40000 (average for Dextran 40)

Bacterial polysaccharides of α-(1-6)-D-Glcp units differing only in chain length and degree of branching which occurs through α(1→3) and α(1→4) branch points. Many bacteria synthesise Dextran from sucrose. *Leuconostoc mesenteroides* and *L. dextranicum* are used commercially. Plasma volume expander. Used also as mol. sieve in a modified form. Mixed ethers and esters are used in lacquers. Chem. and phys. props. differ depending on mode of prodn. Native dextrans have a high Mw, clinical dextrans prod. by synth. or by depolymerisation of native dextrans have a low Mw.

Dextrin, 9CI, 8CI **D-00114**

Amylin. British gum. Starch gum

[9004-53-9]

$(C_6H_{10}O_5)_n \cdot xH_2O$

A mixture of polymerised glucosans. Gives a reddish-brown colour with iodine and does not reduce Fehling's soln. Commercial dextrin is less pure and usually contains sol. starch and glucose. Treatment with dil. acids gives maltose and finally glucose. Formed by partial hydrol. of starch or by heating glucosans, product differs according to conditions of preparation. Used as an excipient for pills, in emulsions, for thickening mordants used in printing fabrics and in manuf. of printer's inks, glues, matches, fireworks, explosives. White or yellow, amorph. powder. Insol. EtOH, Et_2O, sol. in boiling water to give a gummy soln. $[\alpha]_D > +200°$ (H_2O).

▷HH9450000.

Osmotic diuretic. Also a chiral modifying agent for asymmetric redn. of ketones. Mp 62-64°. Bp_2 160-175°. $[\alpha]_D^{20}$ +44.8° (H_2O).

▷LZ4380000.

2-Ac, 5-tosyl:
$C_8H_{12}O_5$ M 188.180
Mp 65-66°. $[\alpha]_D$ +79.2° ($CHCl_3$).

5-Ac, 2-tosyl:
$C_8H_{12}O_5$ M 188.180
$[\alpha]_D$ +83.6° ($CHCl_3$).

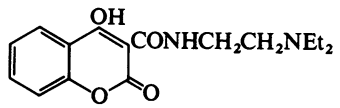
2,5-Ditosyl:
$C_{20}H_{22}O_8S_2$ M 454.509
Mp 100-101°. $[\alpha]_D^{23}$ +57.4° (c, 1 in $CHCl_3$).

5-Nitrate: [16051-77-7]. *Isosorbide mononitrate, BAN, INN. Numerous proprietary names.*
$C_6H_9NO_6$ M 191.140
Used for treatment of angina pectoris. Mp 52-53°.

2,5-Dinitrate: [87-33-2]. *Isosorbide dinitrate, BAN, USAN, INN. Dinitrosorbide. Numerous proprietary names.*
$C_6H_8N_2O_8$ M 236.138
Cardiac stimulant, coronary vasodilator. Mp 71°. $[\alpha]_D^{20}$ +135° (EtOH).

▷LZ4385000.

5-Nitrate, 2-tosyl: Mp 75-76°.



2,5-Dibenzyl:
$C_{20}H_{22}O_4$ M 326.391
$[\alpha]_D$ +75.7° ($CHCl_3$).

$C_{19}H_{35}NO_2$ M 309.491
Anticholinergic agent.
B,HCl: [67-92-5]. *Dicyclomine hydrochloride, USAN. Atumin. Bentyl. Neoquess. Numerous proprietary names.* Cryst. (butanone). Sol. H_2O. Mp 164-166°. Constit. of Debendox.
▷DT7350000.

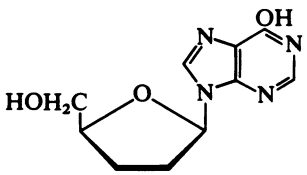
2',5'-Dideoxyadenosine, 9CI, 8CI **D-00219**
*9-(2',5'-Dideoxy-D-*erythro*-pentofuranosyl)adenine*
[6698-26-6]



$C_{10}H_{13}N_5O_2$ M 235.245
Inhibits intracellular 5-phosphoribosyl 1-pyrophosphate synth. Antagonist of cholera toxin. Mp 186-188°. $[\alpha]_D^{22}$ −38° (c, 0.7 in H_2O). λ_{max} 259.5 nm (ϵ 14 400) (MeOH).
Robins, M.J. *et al*, *Biochemistry*, 1966, **5**, 224 (*synth*)

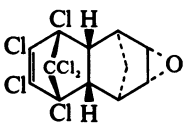
2',3'-Dideoxycytidine, 9CI **D-00220**
DDC
[7481-89-2]



$C_9H_{13}N_3O_3$ M 211.220
Antiviral agent. Potentially of use against HIV infection. Mp 231-232°. $[\alpha]_D^{20}$ +90° (c, 0.5 in H_2O).
Horwitz, J.P. *et al*, *J. Org. Chem.*, 1967, **32**, 817 (*synth*)

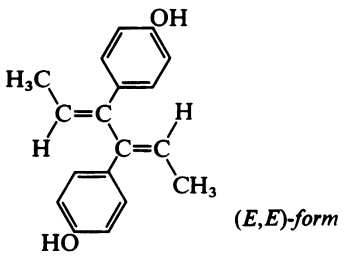
Dieldrin, BSI, BAN, INN **D-00222**
1,2,3,4,10,10-Hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4:5,8-dimethanonaphthalene, 9CI. HEOD, BSI
[60-57-1]



$C_{12}H_8Cl_6O$ M 380.913
The coml. prod. Dieldrin contains >85% of this compd., which is more correctly known as HEOD in Britain. Obt. by chemical or metabolic oxidn. of Aldrin. Insecticide. Nonsystemic, persistent. Mp 176-177°.
▷Highly toxic by skin contact, TLV (skin) 0.25.
IO1750000.
Kearns, C.W. *et al*, *J. Econ. Entomol.*, 1949, **42**, 127 (*use*)

Dienestrol, INN, USAN D-00223

*4,4'-(1,2-Diethylidene-1,2-ethanediyl)bis[phenol], 9CI. **Dienoestrol, BAN**. Denestrolin. Dienol. Dinovex. Follormon. Oestrodiene. Synestrol. γ-Dienestrol. Numerous proprietary names*

[84-17-3]

(E,E)-form

$C_{18}H_{18}O_2$ M 266.339

Coml. product is prob. a mixt. of geometrical isomers. Used to treat menopausal symptoms. Mp 121-122°.

▷SL0580000.

Diacetate: [84-19-5]. *Faragynol. Gynocyrol. Numerous proprietary names.*

$C_{22}H_{22}O_4$ M 350.413

Prisms (EtOH). Mp 119-120°.

▷SL0590000.

(E,E)-form [13029-44-2]

α-Dienestrol

Most potent isomer. Mp 227-228°.

▷SL0582000.

(Z,Z)-form [35495-11-5]

Isodinoestrol. β-Dienestrol

Pale-brown needles (C_6H_6). Mp 192-194°.

▷SL0562500.

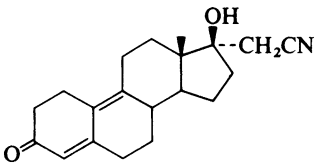
Mono-Me ether: [6033-98-3].

$C_{19}H_{20}O_2$ M 280.366

Mp 142°.

Di-Me ether: [6033-99-4].

$C_{20}H_{22}O_2$ M 294.393



Mp 161°.
