(Institution of Chemical Engineers)

LOSS PREVENTION BULLETIN (Institution of Chemical Engineers)

Sample issue 1975 – Reactor thermal stability, p. 2; Storage tank collapse, p. 2; Explosion and fire in ethylene plant, p. 3; How strong is your storage tank?, p. 3; Hammerblow in pipelines, p. 6

1 1975 – Are your plant modifications safe?, p. 1; More cases of water hammer, p. 7; Exothermic reactor, p. 10; Air eliminator explosion, p. 15

2 1975 – Static electricity as a fire hazard, p. 1; Investigation of electrostatic ignition hazards, p. 12; How can we tell if the accident record is really better?, p. 15

3 1975 – Explosive reactions caused by impurities, p. 1; Practising what is preached, p. 8; Hydrogen sulphide, H_2S , p. 17

4 1975 – Total loss control, p. 1; Engineering maintenance, p. 9

5 1975 – Chemical and physical explosions in furnaces and boilers, p. 1; Bellows again (see also LPB 6), p. 9; Reaction kinetics, p. 16

6 1975 – Hazards of corrosion, p. 1; Relief valves and bursting discs, p. 12; More explosions in plant equipment (see also LPB 7), p. 17

7 1976 – Instrumentation and control, p. 11; Nitrogen, p. 11; Human error, p. 15

8 1976 – Second chance and fail safe design, p. 1; Explosions and fire involving dusts, p. 7; Information for plant operators, p. 19

9 1976 – Vessel overflows, p. 1; Mishap miscellany, p. 5; Potential hazards due to seal failures, p. 12; Unexpected material properties, p. 26

10 1976 – Fin fan coolers, p. 1; Ball valves, p. 3; Radios (see also LPB 11), p. 4; Pressure relief valve chattering, p. 5; The spreading and dispersion of a large release of heavy gases, p. 9

11 1976 – A major incident, p. 2; The risk of hydrocarbons entering steam and condensate systems, p. 5; Mishap miscellany, p. 10; Control room design and location – one company's viewpoint (see also LPB 13), p. 16; Reliability assessment Pt 1, p. 18

12 1976 – Hazards of pyrophoric iron sulphide, p. 1; Safe design and operation of hot oil tanks, p. 7; Neutralisation of phosphorous trichloride, p. 11; Inadequate physical and chemical data – source of major hazard, p. 12; Reliability assessment Pt 2, p. 17

13 1977 – Chemical reactor hazards, p. 2; Hose and coupling incidents, p. 5; Laboratory accidents, p. 14; Co-axial pipes, p. 17; Phosphorus chlorides, p. 21

14 1977 – Operating, maintenance and modification procedures (software), p. 2; Excess flow valves – one company's view, p. 15; Diagnostic techniques, p. 17

15 1977 – Hydrogen (see also LPB 18), p. 2; Building ventilation, p. 10; Liquid metal embrittlement (see also LPB 17), p. 23; Safety systems for tanker loading and unloading, p. 30; Road tanker hose and coupling incidents, p. 33; Hose and coupling incidents, p. 35

16 1977 – The hazards of mineral acid and alkali handling (see also LPB 16), p. 3; Protection for bulk storage of corrosive liquids, p. 21; Control room design and location – a further viewpoint, p. 24

17 1977 – Lagging fires (see also LPB 19), p. 2; Relief valve and venting systems – more hazards associated with maintenance and modification, p. 15

18 1977 – Plant commissioning hazards (see also LPB 19, 20), p. 2; Laboratory accidents, p. 17; Co-axial pipes, p. 2; Excess flow valve incident, p. 22

19 1978 – The transport of chemicals by road, p. 1; Safety down the drain, p. 10; Compression ignition – a case history, p. 24

20 1978 – More software failures, p. 41; Hazards of gas cylinders, p. 45; A new approach to the layout of storage tanks, p. 55

21 1978 – Instrumentation, p. 68; Sparks from steam, p. 81; Hydrogen, p. 85

22 1978 – Hazards of improvisation, p. 101; Fire extinguishing agents and their uses, p. 107; Reflections on the rubbish bin, p. 114; A new approach to the layout of storage tanks (letter), p. 114

23 1978 – Loss prevention in the design and selection of bursting discs, p. 125; Material selection – a factor for loss prevention, p. 136; Hazards of radio frequency ignition, p. 147

24 1978 – Engineering maintenance, p. 155; Liquid lightness of tank dikes, p. 164; Ancillary equipment incidents, p. 167; Corrosion/erosion – some more accidents, p. 172

25 1979 – Fire and explosion hazards in dryers by D. Reay; Loss prevention: a one company view by D.J. Kerr; Reactive chemicals: cyanuric chloride, p. 19; Dimethyl sulphate (letter), p. 24

26 1979 – Bulk storage of corrosive liquids – catastrophic failure of phosphoric acid tanks (see also LPB 33), p. 31; Pressure testing, p. 39; Hazards of comminution, p. 48; Explosions in seal oil reservoirs of centrifugal gas compressors, p. 51; Liquid tightness of tank dikes (letter), p. 52

27 1979 – Acoustic emission testing, p. 59; Hazards involving the use and storage of drums, p. 68; Report on the International Symposium on Grain Elevator Explosions, p. 76; Engineering maintenance – further incidents, p. 80; Academic use of Hazard Workshop Modules by G.S.G. Beveridge

28 1979 – Thermal properties of reactors and some instabilities, p. 91; Flare systems, p. 97; Stress corrosion cracking of stainless steel, p. 104; Design recommendations for outdoor drum storage, p. 115; Guide Notes on the Safe Use of Stainless Steel in Chemical Process Plant (letter), p. 118

29 1979 – Some hazards due to layering of liquids, p. 124; Static electricity – further case histories, p. 134; Dead head hazards of centrifugal pumps, p. 139; Embrittlement of stainless steel by zinc, p. 149; A 'nitrogen explosion' (letter), p. 151

30 1979 – Fire in ducting, p. 155; Thermal decomposition tests, p. 159; Aniline toxicology, p. 165; 'Small is beautiful', p. 171; Embrittlement of stainless steel by zinc, p. 175

31 1980 – The Second Report of the Advisory Committee on Major Hazards – a review by G.S.G. Beveridge; Fire resistance and flame retardants, p. 5; Oxygen deficiency in nitrogen atmospheres and related problems, p. 11; Valve limitations, p. 17; Flare systems – pump out of knockout drum (letter), p. 27

32 1980 – Atmospheric storage tanks for flammable liquids, p. 1; Shell/bottom junction failure in a cone roof tank, p. 13; HSE Guides: tanker marking – packaging and labelling – hot work, p. 15; Legal obligations in relation to chemical engineering laboratories by V.C.

- Marshall; Hazards in chemical engineering laboratories by D.H. Napier; People in laboratories by MA Buttolph; Designing of chemical engineering laboratories by K Everett; Planning safe chemical engineering experiments by H.W. Fowler; A case study: designing new chemical engineering laboratories by G.F. Martin
- 33 1980 – An accident investigation procedure by P. Robinson (see also LPB 34); Industrial dermatitis by R.J.G. Rycroft; A case of valve failure by P.R. Perkins
- 34 1980 – One company's approach to the authorisation of modifications, p. 1; Some seldom considered aspects of pressure relief systems by D.S. Scott (see also LPB 36)
- 35 1980 – Static electricity and dust explosions, p. 1; Hazards of plant cleaning, p. 7; The Law on safety – some questions answered, p. 13; Hazards from ionizing radiation by B. Holiday
- 36 1980 – To vent or not to vent, p. 1; Operating experiences with incinerators from a loss prevention standpoint by D.R. Ready and R.F. Schwab; Another Feyzin (see also LPB 40, 41), p. 25
- 37 1981 – Safety of atmospheric storage tanks, p. 1; How strong is a storage tank?, p. 7; Failure of a lime silo (see also LPB 39), p. 23; From batswing burner to wind tunnel or 'Is the fume cupboard obsolete' – one man's view by V.C. Marshall
- 38 1981 – Accidental release of ammonia to the atmosphere – evidence for the occurrence of denser-than-air vapours by G.D. Kaiser; Hazards of unsatisfactory plant cleaning, p. 23; BSI quality assurance scheme for industrial fasteners, p. 23
- 39 1981 – Electrical fire dangers in the chemical industry by G. Marshall; Glove boxes – some aspects of their use, p. 11; Distribution safety (see also LPB 43), p. 17
- 40 1981 – Hazard identification game by D. Lihou; Power fluidics – control without movement, p. 7
- 41 1981 – Guidance note on the leak hazards of glass process plant and pipeline equipment, p. 1; Fire hazards of electric cables in trays, p. 5; Rupture of roof of caustic storage tank, p. 11; Flame arresters and explosion suppression, p. 13
- 42 1981 – Safe transport of radioactive materials by P.W. Wilson; Glass as a construction material in the chemical industry, p. 11; Safety in design of plants handling liquefied light hydrocarbons (see also LPB 45), p. 21; An overview of disaster control by D. Lihou
- 43 1982 – Fire prevention/protection – a company's approach to fire safety (see also LPB 44), p. 1; Case history of a liquid propane release at Norsk Hydro's ethylene plant at Rafnes, Norway, 8th July, 1981 (see also LPB 47), p. 21; Case histories related to fire, p. 21
- 44 1982 – Design and maintenance of trip systems by M.R. Gibson and G. Knowles; Mississauga by R.F. Fordham; Mexican rail incident 1st August 1981, p. 33; More on glassware – incidents and practical hints, p. 35

- 47 1982 – The probability of coincidence by J.D. Edwards; Fire at Browns Ferry Nuclear Power Station, p. 13; Spontaneous combustion, p. 15; Fighting rim fires by T.A. Kletz; Hazard to pressure vessels storing large quantities of a hazardous material, p. 26
- 48 1982 – The hazops man comes to call – two case studies of hazard studies for relief systems by D.S. Scott (see also LPB 49); HF acid leak in alkylation unit, p. 13; Accidents of the past by T.A. Kletz; Flixborough – the role of the emergency services by V.C. Marshall; Accidents today, p. 27
- 49 1983 – One company's experience of a hazop study (see also LPB 51), p. 1; Safety lockout and electrical isolation, p. 7; Accidents of the past by T.A. Kletz; Ventilation, p. 15; Accidents of today, p. 26; How far will heat flow down a dead pipeline?, p. 28; MUF (Material Unaccounted For), p. 28
- 50 1983 – A risky life by Sir F. Warner; Chemical hazards – reminiscences and lessons of fifty five years by S.R. Tailby, Some historical notes on explosions by J. Bond; Health hazards of yesteryear by J.T. Carter
- 51 1983 – Inherently safer plant – the concept, its scope and benefits by T.A. Kletz; Unusual dust explosion, p. 9; Fire and explosion case histories (see also LPB 53), p. 13; Computer aided operability study by D.A. Lihou (see also LPB 53); Major hazards work in the HSE – a personal view by R.P. Pape
- 52 1983 – Conflagration at Cleveland, Ohio, 20th October 1944 by V.C. Marshall; The runaway train, Montanas, Mexico, p. 7; Exxon Chemical's method for identifying potential process hazards by C.H. Solomon; Lessons from the past 3 – one of Britain's worst oil fires by T.A. Kletz; Case history – static discharge from plastic surfaces, p. 19; Methodologies for hazard analysis and risk assessment in the petroleum refining and storage industry (review) by B.W. Eddershaw; The Safety and Reliability Directorate by J. Clifton
- 53 1983 – Hazard studies and hazard analysis 10 years on by J. Illidge; Inherent safety of pressure vessels and systems by K.M. Wicks; Confined space entry, p. 15; Seveso: cause; prevention (see also LPB 54), p. 27
- 54 1984 – Have you identified all the hazards of your job? by C.H. Solomon, Propane vapour escape from a rail tank car (see also LPB 56), p. 7; Fire and explosion in a gas oil separation plant, p. 13; Incidents 1981, p. 21; Second International Conference on Cryogenic Concrete – a review by J.N. Edmondson; Conference on the Safe Handling of Flammable Dusts – a review by K.N. Palmer
- 55 1984 – On-stream sealing of leaking flange joints using a compound sealing process by H.K. Maushagen; One company's experience of permit-to-work systems, p. 11; Dealing with the toxic hazards of disposal in a safe manner by J.D. Cook; Summary of the Mond Fire, Explosion and Toxicity Index by P. Doran and T.R. Greig; Observation of the effects of zinc-rich paint on 7 and 9 Cr-Mo steels during stress relieving and the development of suitable cleaning procedures by SETE Consultants and Services Ltd
- 56 1984 – Corrosion beneath thermal insulation – a cause for concern, p. 1; Accidents of the Past No. 4 – carbon dioxide as a cause of explosions by T.A. Kletz; Spread of fire, p. 11; Formic acid – a hidden hazard, p. 24; Dow reports an accident involving a fatality, p. 26; Accidents

- of today – plastic plugs in pressure containing equipment, p. 26
- 57 1984 – A major fire in a floating roof crude oil storage tank by C.J. Mumford (see also LPB 63); Report on the incident at the Texaco Company's Newark storages facility, 7th January 1983, p. 11; Case histories – tank fires, p. 19; C.A. La Electricidad de Caracas, December 19, 1982, Fire (near) Caracas, Venezuela by W.M. Garrison (see also LPB 59, 60, 61)
- 58 1984 – One hundred largest losses – a thirty year review of property damage losses in the hydrocarbon-chemical industries by F.A. Manuele; Storage of liquid ammonia (see also LPB 59), p. 13; Accidents of the past No.5 – major fire at a marketing terminal by T.A. Kletz; The HSE heavy gas dispersion trials project at Thorney Island by B. Roebuck; The Human Factors in Reliability group by I.A. Watson
- 59 1984 – Intelligent fire detection systems by M. Finucane; Rapid ranking of hazards by C.J. Mumford and D.A. Lihou; Safe disposal of relief discharges by M. Kneale; Entry into a confined space – a retrospective look by J. Bond; Pressure reducers, p. 28; Lessons from the past No. 6 – reluctance to recognise new hazards by T.A. Kletz; Nitrogen – a gassing incident and a near miss, p. 30
- 60 1984 – Incidents 1982, p. 1; odour as an aid to chemical safety: odour thresholds compared with threshold limit values by P.J. Lynskey (see also LPB 61); Personal protection: respiratory protection – the importance of facepiece fit by M.J. Evans and P. Leinster; Weak spots in a refinery, p. 40
- 61 1985 – Emergency procedures by P.J. Lynskey; Update on the Spanish campsite disaster by L. Hymes; The phosphorus railcar explosion near Brownson, Nebraska, on Sunday, 4 February 1978 by I. Hymes; Major disaster averted in massive escape of vinyl chloride by J. Kilmartin (see also LPB 65); Accidents of today, p. 33
- 62 1985 – Toxic gas incidents – some important considerations for emergency planning by G. Purdy and P.C. Davies (see also LPB 63); Interactive video, p. 13; A matter of some agitation by M. Kneale; Safety aspects of the use of microcomputers and programmable controllers for chemical process control by S.J. Skinner Guide to reducing human error in process operation by P.W. Ball; A compressor overspeed, p.27
- 63 1985 – Bhopal – the company's report, p. 1; The toxic hazards of hydrogen sulphide by P.J. Lynskey; Some H₂S incidents by HSE; The hazards of nitrogen by J. Bond; Improving process safety and loss control software in existing process plant by H.M. Tweedale; Preparation for entry into a confined space – one company's view (see also LPB 64), p. 31
- 64 1985 – Analysis of the LPG disaster at Mexico City by C.M. Pietersen; Refinery fire contained, p. 13; The toxic effects of chlorine by MHAP; Accidents of today, p. 27
- 65 1985 – Loss prevention implications of arson: Pt 1, Case histories and prevention by P.A. Carson, C.J. Mumford and R.B. Ward; Acetylene cylinder fire, p. 15; Violent polymerisation by J. Bond; An ethylene reflux pump fire by J. Bond; Spectators and other vulnerable exposes to major accident hazards: an emergency services headache by I. Hymes
- 66 1985 – Dust explosibility testing by P. Field (see also LPB 66); Some recent British initiatives on dust explosions prevention and protection by G. Butters; Principles for the safe transfer of technology by EFCE; Hydrogen cyanide release from a failed bonnet gasket, p. 23; The need to be blamed (letter) by D.A. Lihou (see also LPB 67)
- 66 suppl 1985 – Incidents 1983
- 67 1986 – Industrial health hazards: Pt 1, Sources of exposure to substances hazardous to health by P.A. Carson and C.J. Mumford; Lessons from the past No.7 – flying saucers have landed by T.A. Kletz; Ludwigshafen – two case histories by V.C. Marshall
- 68 1986 – Unconfined vapour cloud explosions involving hydrogen rich gases – estimating the blast effects by J.L. Hawksley; The Spanish campsite disaster – a new scenario by H. Ens; Reactor incident, p. 33; Experience with a temperature monitoring system, p. 35; The effects of explosions in the process industries by the MHAP
- 69 1986 – Some problems with valves by J. Bond; Leak sealing using compound injection by J. Bond; Refinery fire, p. 17; Fatal accident on a hydrocarbon recovery plant, p. 25; The rupture of a tank of benzene, p. 29; Power station fire, p. 33
- 70 1986 – Handling the vapour cloud after failure of a flare line, p. 1; Polymer lined GRP tank failure, p. 7; Loss prevention implications of arson Pt 2 – Investigation by P.A. Carson and C.J. Mumford; Flashing liquid flow calculations by D.A. Carter
- 71 1986 – One hundred largest losses – a thirty year review of property damage losses in the hydrocarbon-chemical industries by F.A. Manuele; Maintaining your sprinkler system by Factory Mutual Engineering Corporation; Explosion in an oxidised bitumen tank, p. 71; Ship/shore transfer of liquefied gases by J. Bond; Fire in a coker unit, p. 27; Three injured in extruder explosion, p. 31; The Spanish campsite disaster (letter) by J. Foxcroft
- 72 1986 – Sizing pressure vacuum valves for cone roof tanks, p. 1; The first tanker explosion by P. Watson; Inadvertent pressure-testing of a storage tank to destruction, p. 7; The Spanish campsite disaster – a third view by V.C. Marshall; Comments on 'The Spanish campsite disaster – a third view' by H. Ens; Causes of accidents (the results of a study), p. 21; Some problems with valves – another case history, p. 28
- 73 1987 – Some essentials of lightning protection (in electrical systems) by Factory Mutual Engineering Corporation; Explosion in an isopropyl alcohol tank, p. 9; Is pipework given the attention it deserves by R.F. Towndrow; A tale of woe by C.D. Plummer; Spanish campsite disaster (letter) by J. Bond (see also LPB 72); Extruder explosion (letter) by L. Carter (see LPB 71)
- 74 1987 – An oleum leakage, p. 1; Explosion in a superheater, p. 15; Fire protection systems – how to cope with impairments, p. 17; A pump explodes, p. 23
- 75 1987 – Autoignition temperatures (AITs) – how hot is dangerous? by F.S. Ashmore and D. Blumson; The Sandoz warehouse fire, p. 11; Overpressuring of a storage tank, p. 19; Explosion in a heat exchanger during demolition, p. 22; Hydrogen sulphide incident, p. 23; The two safeguard approach for minimising human failure injuries by J. Bond and J.W. Bryans
- 76 1987 – Industrial health hazards: Pt 2, Development of UK legislation by P.A. Carson and C.J. Mumford; The Chernobyl accident by A.N. Hall, S.F. Hall and W. Nixon; HSE warning on road tanker discharge valves, p. 30;

- Failures of glass reinforced plastic tanks by T.E. Maddison
- 77 1987 – The Feyzin disaster, p. 1; Major LPG fire at US refinery, p. 11; Sabotage causes propane release, p. 17; Fire at LPG recovery installation of a refinery, p. 27
- 78 1987 – Static electricity hazards in industry by F.J. Pay; Electrostatic ignition of volatile liquid vapour, p. 9; Hydrogen explosion/detonation in an ammonia plant, p. 11; Temporary manhole covers by J. Bond; Three year survey of accidents and dangerous occurrences in the UK chemical industry by B.J. Robinson; Molten sulphur spillage, p. 23; Heat of dilution causes violent eruption in storage tank, p. 26; Computerised chemical engineering industry information by S. Pantry
- 79 1988 – Flame arresters and the chemical tanker by P.B. Watson; The velocity flame stopper by W.B. Howard Faulty ducts cause switchroom fires, p. 23; Safety audit of refrigerated gas facilities, p. 25; Static electricity hazards in industry (letter) by P.A. Kalisvaart (see also LPB 78)
- 80 1988 – Protective clothing design by L.E. Jones; Operator burned whilst using incorrect tanker connection, p. 3; Gloves as protective equipment by I.P. Hoyle; Protection from protective clothing by I.P. Hoyle; Hazards on a rubber injection moulding machine, p. 14; Expect the unexpected, p. 14; Acetylene cylinders can be dangerous by F.S. Ashmore; Shattering rotameter cuts safety glasses in half p. 19; Dizzy heights, p. 20; Some problems with breathing apparatus, p. 21; The International Safety Rating System by J. Bond
- 81 1988 – Chernobyl – was it the worst accident? by V.C. Marshall; Glasnost now applies to the Soviet chemical industry, p. 15; Incinerator explosion, p. 17; Cool flames by R.D. Coffee; Autoignition, slow combustion and the variation of minimum ignition temperature with vessel size by T.J. Snee; Lessons from the past – entry into vessels, p. 29; Qatar tank failure (letter) by T.A. Kletz
- 82 1988 – Calculation of the intensity of thermal radiation from large fires by MHAP; 'Pops' in tanks, p. 12; Chemical risk: living up to public expectations by H.J. Corbett Tank farm burns for a whole week, p. 19; The Boston, Mass., incident of January 15th, 1919 by V.C. Marshall
- 83 1988 – Failure of a flexible pipe in an H₂ installation area, p. 1; Seizure of boiler relief valves, p. 3; Failure of articulated bellows by A. Smith; Another non-return valve failure, p.9; Damaged flange seal face leads to ammonia release, p. 11; Fire on a gasoline treater unit, p. 13; Process worker sustains an acid burn to his right eye, p. 15; Release of UF₆ in a vaporiser room, p. 17; Some incidents caused by failure of screwed joints, p. 19; An explosion involving 1,1,1-trichloroethane by I. Wrightson and R.C. Santon; Three incidents, three lessons, p. 25; Explosion and fire at a phenol plant by R.F. Schwab; 'Pops' in tanks (letter) by T.A. Kletz (see also LPB 82)
- 84 1988 – Protection of warehouses against fire by A. Mackintosh; The forgotten hazards: services in warehouses by R. Heels; Materials selection for composite fire damper by B.D. Baines; Lack of segregation causes rapid spread of fire, p. 19; Fire in Auckland, New Zealand by B.S. Armstrong; Molten sulphur spillage (letter) by P.G. Ayers (see also LPB 78)
- 85 1989 – HF burn to fitter's forearm, p. 1; Serious accident during valve replacement caused by incorrect procedure, p. 3; Release of UF₆, vapour, p. 5; If it didn't quite happen ... tell somebody, p. 7; A programme of safety assurance of liquid carbon dioxide storage vessels by A.R. Coleman; UK and European hazard information systems – a personal view by B. Cahill; Caustic potash spillage in tank farm, p. 27; Protection of warehouses against fire (letter) by B. Johnston (see LPB 84)
- 86 1989 – A case history involving the release of chlorine, p. 1; Pressure testing and its hazards by R. Dooner and V. Marshall; Exposure to acetone cyanhydrin, p. 17; A reappraisal of safety in chlorine handling, p. 19; Release of HF fume due to valve fracture, p. 22; Wrongly labelled gasket causes chlorine release, p. 23; Release of chlorine from an expansion pot, p. 27; Protection of warehouses against fire (letter) by K.N. Palmer (see also LPB 85); Nitrous oxide: no laughing matter (letter) by L. Bretherick
- 87 1989 – Two men gassed by H₂S p. 1; Three injured in extruder explosion, p. 3; Corrosion under insulation causes refinery fire, p. 5; Explosion when refuelling a liquid gas-driven stacker, p. 7; Pressure unrestrained, p. 9; Engineering for health by J.R. Jackson; Inherently safer design, p. 21; Emergency planning – in practice by J.M. Mullins; Incident during distillation of nitrobenzaldehyde, p. 27; Release of chlorine from an expansion pot (letter) by T.A. Kletz; Reporting and analysis of industrial incidents (letter) by D.J. Lewis
- 88 1989 – Operator burned during sampling operations, p. 1; Programmable electronic systems by B.W. Eddershaw; Warehousing of chemicals, p. 9; Storage tanks – a vendetta, p. 11; Explosion in a dinitrotoluene pipeline, p. 13; Raw glycidic collecting tank explodes, p. 17; Lessons of the past, p. 18; Bitumen tank fire, p. 19; Electrostatic hazards from pouring powdered chemicals into vessels from plastic bags by J. Bond; Analysis of a tank fire 'classic' by L. Steinbrecher, Decomposition of nitric oxide (letter) by J.L. Currie (see also LPB 86); Explosion of 2-nitro-benzaldehyde (letter) by P.G. Urben (see also LPB 87)
- 89 1989 – Loss prevention in pilot plants: Pt 1 – The hazards by P.A. Carson and C.J. Mumford; Accident to a scaffolder in a plenum chamber, p. 9; Hydrocracker accident, p. 13; Operator fall from scaffold, p. 18; LPG storage cracking experience by J.E. Cantwell; Stress corrosion cracking results in hydrofluoric acid spill, p. 27; Sizing the relief system for runaway reactions by A.J. Wilday
- 90 1989 – Pavadena explosion, p. 0; The hazards of purging a line, p. 1, Loss control in pilot plants by P.A. Carson and C.J. Mumford: Pt 2, Control measures; LPG pipeline and Trans-Siberian Railway explosion and fire by D.J. Lewis; Investigation into glacial acetic acid spillage, p. 13; List of major incidents 1987, p. 15; Severe burns resulting in fatality caused by dust explosion during pallet shrink-wrapping, p. 27; Two reactor incidents, p. 29; Failure of a reverse buckling disc, p. 30; Incident during vacuum distillation of nitrobenzaldehyde (letter) by J.L. Cronin

Huvinen; Caustic solution splashed into fitter's eye, p. 18; Is it isolated – or is it?, p. 19; Work permit precautions not followed, p. 21; Electric shock from damaged light fitting, p. 22; Three incidents involving inadvertent SO₂ discharges, p. 23; Near miss incident with a tanker, p. 25; Investigation into an incident involving a release of hydrogen fluoride (HF) fume, p. 26; Operator burned with hot ethylene glycol, p. 27; Incinerator explosion, p. 29; What next? by J. Bond
- 93 1990 – The Pepcon disaster, 4th May 1988, Henderson, Nevada by J. Bond; Near miss, p. 3; Loss control in pilot plants: Pt 3, Data collection and evaluation by J. Bond, P.A. Carson and C.J. Mumford; Wrong trip causes low level trip malfunction, p. 23; A strategy for plant management to prevent loss – 7 ways for managers to cut incidents by up to 44% by N. Dunford; Locked pressure that stayed on and ... on, p. 32; Reactor sparge weighing approximately 5000 N fell a distance of 1.5 m, p. 33; Boiler explosion that caused three fatalities by J. Bond; Is there anything I've forgotten? p. 35; Quantified risk assessment (letter) by D.W. Smith
- 94 1990 – A tanker spill incident, p. 1; Five incidents involving road tankers, p. 7; Security of vehicle loads (packaged products), p. 10; Accidents involving road tankers with flammable loads by J. Bond; Morris plant olefins unit, September 12, 1989, p. 16; Nightmare on the interstate: fireball from propane tanker accident ignites buildings; cars, grass, kills nine and injures many by R.M. Adelman and B. Adelman; Lessons to be learned from an oil terminal fire by B. Browning and A.H. Searson; An explosion in a cooling water system by D. Mansfield; Large storage area fire, p. 26; Explosion and fire in Houston, Texas, p. 30
- 95 1990 – Dust explosion during cleaning operation on polymer hopper – case history, p. 1; Chemical company broke the rules; p. 4; Static electricity and bottom loading, p. 5; Well known hazard highlighted by an accident, p. 6; Prevention and protection for combustible dusts; p. 7; An incident involving an explosion of magnesium dust, p. 13; Five explosions involving people working in direct contact with flammable atmospheres; p. 15; Fire in a polymer powder, p. 19; Nightmare on the interstate (letter) by V.C. Marshall (see also LPB 94); Safety valves (letter) by S.J. Kast (see also LPB 92)
- 96 1990 – Enforcement aspects of COSHH by I. Wrightson, p. 1; The legacy of Flixborough by E. Crooks, p. 7; Maintenance for loss prevention in process industries by I. Hirata, p. 13; Case studies of some fire accidents in Yugoslavia's oil refineries by M. Perunicic and M. Skotovic, p. 23
- 97 1991 – Safety considerations in using liquid nitrogen by J.W. Hempseed, Asphyxiation hazards of inert gases (see also LPB 98), p. 5; Dryer package H₂S fatality, p. 7; A near miss when titanium gaskets used in error on chlorine, p. 9; Ethylene oxide-hydrate: a commissioning incident by M. Kneale; Pipe rupture and fire in a vinyl chloride monomer (VCM) plant, p. 12; A human factors approach to the effective design of evacuation systems by B.P. Fitzgerald, M.D. Green, J. Penington and A.J. Smith; Toluene drum filling explosion near miss incident, p. 23; Explosion at the Phillips' Houston chemical complex, Pasadena, 23 October 1989 by J. Bond
- 98 1991 – Managing for safety, p. 0; Flammable vapour escape from condenser vent, p. 1; Tow away incident, p. 5; Case history of a runaway exothermic reaction, p. 7; Formation of butane hydrate leads to hydrocracker fire, p. 9; Fatal accident involving inaccurate P&IDs, p. 13; Explosion at Cooke's Works, Nobel's Explosives Company Ltd, p. 18; Asphyxiation death of a contract welder, p. 19; Acid burns to face, chest and legs during preparation of plant for maintenance, p. 20; Blackout – losing electrical power in chemical process industries by K.B. Ratcliffe; The Peterborough explosion, p. 24; Chlorine release following pipe failure caused by iron/chlorine fire initiated by stress relieving operation, p. 25
- 99 1991 – Catastrophic losses: an insurance broker's perspective by D.F. O'Donovan; Introduction to the large property damage losses in the hydrocarbon chemical process industries; p. 1; A thirty year review of large property damage losses in the hydrocarbon chemical process industries by Marsh and McLennan; Large property damage losses by K.N. Palmer and V.C. Marshall
- 100 1991 – Explosion at the BASF Antwerp ethylene oxide/glycol plant, p. 1; Ethylene oxide plant explosion – 3rd July 1987 BP Chemicals, Antwerp, Belgium by B.E. Mellin, The 1990 Shell explosion by T.A. Kletz; The benefits of flame retardant clothing by D.M. Tooth; Fire resistant protective clothing (Nomex suits) by B.E. Mellin; Major incidents – catalyst or initiator for legislative change by M.F. Pantony; Puebla, Mexico – 19th June 1977 by D. Lewis
- 101 1991 – Houston rail tanker explosion by J. Bond; Hydrogen cyanide tank explosion by J. Bond; Major hazard aspects of the transport of dangerous substances by R.M. Turner Toluene road tanker accident, p. 13; Bangkok LPG disaster, p. 19; 24th September 1990; Crescent City, Illinois – 21 June 1970 by D. Lewis
- 102 1991 – Piper Alpha – cost of the lessons by T.C. Redmond; Overpressurisation through chemical reactions evolving gaseous products by P.A. Carson and C.J. Mumford; Fire and explosion in process waste water tank, p. 7; Batteries, p. 21; Safe use and handling of primary batteries; p. 23; Electrical safety, p. 25; Two fatalities caused by lack of oxygen in confined spaces; p. 27; Failure of pipework from a chemical plant reactor system by A.B. Smith; Teaching of safety in British universities (letter) by F.K. Crawley; Letter (on bitumen tank fires), p. 35
- 103 1992 – European Process Safety Centre, p. 0; Refinery losses – waiting for the big one by J. Di Gesso; Management styles – the effects on loss prevention by D.A. Lihou; The largest explosion in the UK, Fauld, 1944, p. 17; Report of an explosive release of graphite scalings from a drum, p. 19; The control of

- catastrophic event and the 'Big 10' goals in safety management by F.E. Bird; Fatal accident caused by faults in procedures; p. 24; Another valve accident: one accident leads to another, p. 25; Two incidents involving valve actuators, p. 29; Cumene hydroperoxide (CHP) drum explosion, p. 31
- 104 1992 – Beware the unexpected by F.K. Crawley; Two short piping case studies by F.K. Crawley; What is more important – the permit to work or the execution of the plan?, p. 5; Fire on a gas processing plant, p. 7; Fire in a refinery, p. 9; Demolition near miss, p. 10; Loss of instrumentation from a lightning strike, p. 11; Safe maintenance access on chemical batch reactor plants, p. 12; Frost leads to ice plug damage and fire, p. 13; The Seveso disaster – an appraisal of its causes and circumstances by V.C. Marshall; Two very serious near misses; p. 27
- 105 1992 – Waverly, Tennessee, 24 February 1978 by D. Lewis; Hazop reviews of electronic interlock/control systems and electrical distribution systems by F.R. Mitchell; Activated charcoal filter fire, p. 15; Learning from accident experience – are the old lessons really being applied? by B. Hancock; Chemical warehouse fire in New Zealand, 21 December 1984 by P.G. Kirk; A demonstration of the use of Hazcheck and a systems example by an analysis of a recent refinery line accident by G.L. Wells and C.M.C. Phang; Notes on the Fauld explosion (letter) by V.C. Marshall
- 106 1992 – Hydrocarbon fires in large storage tanks by K.N. Palmer; Overpressurisation of a refrigerated butane storage tank, p. 5; The Cochin refineries fire, p. 9; Problems with monomer storage, p. 14; Report by the tank collapse tank force: Ashland oil tank collapse by B. Mellin; Explosion involving a compressed air breathing apparatus cylinder, p. 17; Propane release during sampling, p. 19; Coriolis flowmeters by J. Bond
- 107 1992 – Rollover, p. 1; Ammonia tank failure in Lithuania by B.O. Andersson and J. Lindley; Fluid catalytic cracker regenerator incident, p. 17; Damage to an electrical cable by a contractor whilst excavating for drainage modifications, p. 21; Incident where an electrical cable was damaged during ground excavation, p. 22; Explosions in flare stacks during maintenance (see also LPB 108), p. 23; Four incidents involving valves, p. 27; Major hazard aspects of the transport of dangerous substances, p. 29
- 108 1992 – Safety versus the environment, p. 0; Fires without external ignition sources – part 1, spontaneous combustion by P.A. Carson and C.J. Mumford; Explosions in fired heaters, p. 17; Guidance on hazop procedures for computer-controlled chemical plant by D.M. Willis; Two incidents involving lead/acid batteries, p. 28; Ammonia tank failure in Lithuania: an alternative explanation (letter) by A.J. Wilday (see also LPB 109)
- 109 1993 – Explosion in a sulphonation process by K. Bergroth; Runaway cleanout, p. 7; Fires without external ignition sources – part 2, the hazards of pyrophoric substances by P.A. Carson and C.J. Mumford; Incident in a salt bath used for heat treatment of uranium slabs, p. 25
- 110 1993 – Security of electrical supply systems including standby supplies by J.A. McLean; Spillage of ammonia at a tanker offloading station, p. 7; Two asphyxiation hazards, from maintenance, p. 8; Fires without external ignition sources – part 3, precautions for pyrophoric substances by P.A. Carson and C.J. Mumford (see also LPB 111); Polymerisation runaway reaction, p. 25; Quantifying the fire hazard of oil-soaked insulation (letter) by T.O. Craig
- 111 1993 – European Process Safety Centre, p. 0; Flare and drain systems – the twin Achilles' heels of process plants? by F.K. Crawley; The zero accident approach at British Steel, Teesside Works by J. Ball and D. Procter; Lessons learned from the failure of a computer system controlling a nylon polymer plant by I. Nimmo, S.R. Nunns and B.W. Eddershaw; An accident caused by reverse flow, p. 25; The wrong valve and its rough treatment cause an explosion, p. 26
- 112 1993 – STATAS: development of an HSE audit scheme for loss of containment incidents – part 1, a loss of containment model by K.B. Ratcliffe; Practical examples of safety risk assessment in BAPCO by R.K. Goyal; Use of 'Lessons learned' for in depth analysis by J.R. Taylor The challenge of Kozloduy by J.A. Ashurst and G. Davidson; Nitrogen near-miss, p. 20; Cumene hydroperoxide (CHP) drum explosion, p. 21; Chlorine leak during shutdown test; Letter (on Coode Island) by G. Croudace
- 113 1993 – Dust explosion hazards, p. 0; Safety in the design of chlorine dioxide plant by G. Cowley; Pressure vessel failures – 5 incidents, p. 13; STATAS: part 2, management and organisational factors: a socio-technical model of accident causation by K.B. Ratcliffe; Emulsion polymerisation incident, p. 25; A chlorine fatality, p. 26; Static electricity causes fire in powder handling (see also LPB 114), p. 27
- 114 1993 – Electrostatic hazards of foam blanketing operations by P. Howells; Hazards involved in the handling and use of dimethyl sulphoxide (DMS) by J. Hall; Sunderland petrol (gasoline) tanker fire by V.C. Marshall; Sparks fly during process transfer, p. 19; Only half the story by T.A. Kletz; STATAS: part 3, constructing an audit scheme by K.B. Ratcliffe; The UK Health and Safety Executive Information Service by R. Lewis
- 115 1994 – The European Process Safety Centre, p. 0; Explosion in a nitration reaction vessel, p. 1; Major refinery loss, p. 6; Butyl acrylate splash, p. 7; Coal dust explosion, p. 9; Water hammer – and so much more by T.A. Kletz; A review of major incidents and their consequences by E. Crooks
- 116 1994 – The cost of accidents at work, p. 0; The Allied Colloids fire and its immediate lessons by V.C. Marshall; The Fuji Oil Sodegaura refinery accident by the High Pressure Gas Safety Institute of Japan; Safety vs environment by T.A. Kletz; Hydrogen peroxide deflagration in waste water treatment tank p. 17; Two incidents with sealless pumps, p. 21; Instrument sprays acid on shop wall, p. 22
- 117 1994 – Flixborough – the beginning of a cultural revolution by V.C. Marshall; Flixborough: 20 years on by R.D. Turney; An accident when fitting a new operating mechanism to a live valve by J. Bond; Acid line breaks – worker burned, p. 17; An accident due to a poor vent system, p. 18; Auditing safety procedures by H.M. Tweeddale; Diamine release from joint failure, p. 24
- 118 1994 – Safety management of multi-product batch plants – wider lessons from the Allied Colloids fire by V.C. Marshall; Runaway polymerisation leads to release of vinyl acetate, p. 8; Fire caused by specification change by R. Turney; Human error as a cause of accidents by

W. Rothweiler, Incident involving static electricity discharge on ethanol road tanker, p. 14; Near-miss – circuit breaker falsely indicates lockout, p. 15; Ground fault circuit interrupter protects mechanic, p. 16; Environmental audit in major accident assessment by R.W.S.M. Kingsbury

119 1994 – The fire at Hickson and Welch by T.Kletz; Explosions in a large spray dryer, p. 5; Chemical burn injury, p. 8; Ethyl acetate – is it a static accumulator? by J. Bond; An accident at a vitrification plant, p. 13; Further commentary on the aftermath of the fire at Allied Colloids – an individual view, p. 15; Poor management

of change – two incidents, p. 17; Outline of an integrated approach to solve growing safety and environmental conflicts by A. Debeil and L. Myron

120 1994 – Corporate manslaughter: panacea or panic measure?, p. 2; The principle of multiple causes by J. Bond; Some accidents of 1995 by T. Kletz; Start-up modification causes fatalities in 1859 by R. Turney; Chlorine combustion incident, p. 9; Drumming operations lead to fires, p. 10; European Process Safety Centre by B. Hancock; One approach to hazard control, p. 13; Static discharge (letter) by T.H. Pratt; Which risk definition? (letter) by B.C.W. Hotson

Acronyms

AAE	Additional Accommodation East (Piper Alpha)	AN	ammonium nitrate
AAM	accident anatomy method	ANA	ammonium nitrate-ammonia
AAR	Association of American Railroads	ANAP	action-not-as-planned
AAW	Additional Accommodation West (Piper Alpha)	ANC	adaptive noise cancellation
ABC	general purpose dry chemical	ANL	Argonne National Laboratory
ABCM	Association of British Chemical Manufacturers	ANN	artificial neural network
ABI	Association of British Insurers	ANSI	American National Standards Institute
ABL	atmospheric boundary layer	AOD	argon-oxygen decarburization
ABMA	American Boiler Manufacturers Association	APC	air pollution control
ABPI	Association of the British Pharmaceutical Industry	APCA	Air Pollution Control Association
ACA	Advisory Committee on Asbestos	APAU	Accident Prevention Advisory Unit
ACDS	Advisory Committee on Dangerous Substances	API	American Petroleum Institute
ACE	Army Corps of Engineers	APJ	absolute probability judgement
ACGIH	American Conference of Government Industrial Hygienists	APS	automatic protective system
ACMH	Advisory Committee on Major Hazards	AQ	air quality
ACOP	Approved Code of Practice	AQD	Aeronautical Quality Assurance Directorate
ACR	Average circle radius	AQL	acceptable quality level
ACRS	Advisory Committee on Reactor Safety	AQP	average lot quality protection
ACSNI	Advisory Committee on the Safety of Nuclear Installations	AR	alcohol resistant
ACTS	Advisory Committee on Toxic Substances	ARC	accelerating rate calorimetry
ADI	acceptable daily intake	ASCE	American Society of Civil Engineers
ADN	European Agreement for the International Transport of Dangerous Goods	ASHRAE	American Society of Heating Refrigerating and Air-conditioning Engineers
ADNR	European Agreement for the International Transport of Dangerous Goods (River Rhine)	ASM	Algebraic stress model
ADR	European Agreement concerning the International Carriage of Dangerous Goods by Road	ASME	American Society of Mechanical Engineers
ADT	adiabatic storage test	ASQC	American Society of Quality Control
AE	acoustic emission	ASTM	American Society for Testing and Materials
AEA	action error analysis	ATMS	assumption-based truth maintenance system
AEC	Atomic Energy Commission	ATN	augmented transition network
AEL	accessible emission level	ALIT	Association of University Teachers
AFFF	aqueous film forming foam	AWS	American Welding Society
AFNOR	Association Francaise de Normalisation	BA	breathing apparatus
AFPA	Australian Fire Protection Association	BACT	best available control technology
AGA	American Gas Association	BAM	Bundesanstalt für Materialprüfung
AGR	advanced gas-cooled reactor	BASEEFA	British Approvals Service for Electrical Equipment in Flammable Atmospheres
AHM	acutely hazardous material	BASF	Badische Anilin und Soda Fabrik
AHP	analytic hierarchy process	BATNEC	best available technology not entailing excessive cost
AI	artificial intelligence	BCC	British Cryogenic Council
AIA	American Insurance Association	BCF	bromochlorodifluoromethane
AIB	Accident Investigation Branch	BCGA	British Compressed Gases Association
AICHe	American Institute of Chemical Engineers	BCISC	British Chemical Industry Safety Council
AID	Aeronautical Inspection Directorate	BCME	bis(chloromethyl)ether
AIHA	American Industrial Hygiene Association	BCS	Beilby, Cottrell and Swinden (model)
AIR	American Institute for Research	BD	bursting disc
AISI	American Iron and Steel Institute	BFR	binomial failure rate
AIT	autoignition temperature	BG	British Gas
AL	action level	BGC	British Gas Corporation
AIARP	as low as reasonably practicable	BG/C&W	British Gas/Cremer and Werner (model)
Amoco	American Oil Company	BHEP	basic human error probability
AN	acrylonitrile	BI	business interruption
		BIA	Berufsgenossenschaftliches Institut für Arbeitssicherheit
		BITC	Bureau International Technique du Chlore
		BLEVE	boiling liquid expanding vapour explosion
		BLV	biological limit value
		BM	Bureau of Mines
		BMCS	Bureau of Motor Carrier Safety
		BNF	Backus-Naur form
		BNFL	British Nuclear Fuels Ltd
		BNL	Brookhaven National Laboratory
		BNP	back-propagation network

BOCA	Building Official and Code Administration	CERCLA	Comprehensive Environmental Response, Compensation and liability Act (Superfund)
BOD	biological oxygen demand	CF	certainty factor
BOHS	British Occupational Hygiene Society	CF	credit factor (Dow)
BOP	blowout preventer	CFC	chlorofluorohydrocarbon
BOR	boil-off rate	CFD	computational fluid dynamics
BP	bulk property	CGA	Compressed Gas Association
BPCS	basic process control system	CHA	concept hazard analysis
BPEO	best practical environmental option	chazop	computer HAZOP
BPF	British Plastics Federation	CHEMSAFE	Chemical Industry Scheme for Assistance in Freight Emergencies
BPM	best practicable means	CHEMTREC	Chemical Transportation Emergency Centre
BR	British Rail	CHEP	conditional human error probability
BRE	Building Research Establishment	CHETAH	chemical thermodynamics and energy hazard
BRL	Ballistics Research Laboratory	CHIP	Chemicals (Hazard Information and Packaging) Regulations 1993
BSC	bench scale calorimeter	CHL	classification of hazardous locations
BSC	British Safety Council	CHP	cumene hydroperoxide
BSC	British Steel Corporation	CI	Chlorine Institute
BSI	British Standards Institute	CIA	Chemical Industries Association
BTC	British Transport Commission	CIB	Consell International de Batiment
BTM	bromotrifluoromethane	CIBS	Chartered Institute of Building Services
BUA	built-up area	CIBSE	Chartered Institute of Building Services Engineers
BWR	boiling water reactor	CIIT	Chemical Industry Institute of Toxicology
CA	Certifying Authority	CIM	computer integrated manufacturing
CAA	Civil Aviation Authority	CIM	Uniform Rules concerning the Contract for International Carriage of Goods by Rail
CAA	Clean Air Act	CIMAH	Control of Industrial Major Accident Hazards Regulations 1984
CAAA	Clean Air Act Amendments	CIP	cleaning in place
CAD	computer-aided design	CISHC	Chemical Industry Safety and Health Council
CADA	critical action and decision approach	CJ	Chapman-Jouguet
CADE	computer aided design and engineering	CLAW	Control of Lead at Work Regulations 1980
CADET	critical action and decision evaluation technique	CLER	Classification and Labelling of Explosives Regulations 1983
CAER	Community Awareness and Emergency Response	CM	chemical manufacturing
CAF	compressed asbestos fibre	CM	condition monitoring
CAPE	computer aided process engineering	CMA	Chemical Manufacturers Association
CAPITB	Chemical and Allied Products Industry Training Board	CME	chloromethyl ether
CAWR	Control of Asbestos at Work Regulations 1987	CMF	common mode failure
CBI	Central Bureau of Investigation (India)	CMi	Christian Michelsen Institute
CBI	Confederation of British Industry	COD	chemical oxygen demand
CBL	convective boundary layer	COD	crack opening displacement
CCA	copper-chrome-arsenate	COER	Control of Explosives Regulations 1991
CCD	cause-consequence diagram	CONCAWE	oil companies organization
CCF	common cause failure	CONDAM	Construction (Design and Management) Regulations
CCPS	Center for Chemical Process Safety	COP	Code of Practice
CCS	centralized control system	COP	coefficient of performance
CCT	cause-consequence tree	COPA	Control of Pollution Act
CCW	Chester-Chisnall-Whitham	COPEP	Chlorine Out-Plant Emergency Plan
CD	conceptual dependency	COSHH	Control of Substances Hazardous to Health Regulations 1988
CDE	Chemical Defence Establishment	COTIF	Convention concerning International Carriage by Rail
CDFM	conservative deterministic failure margin	COV	collision with other vehicle
CE	critical examination	CP	cathodic protection
CEC	Commission of the European Communities	CP	conceptual dependency
CEFIC	European Federation of Chemical Engineering	CPA	Canadian Petroleum Association
CEGB	Central Electricity Generating Board		
CEI	Chemical Exposure Index (Dow)		
CELD	cause-effect logic diagram		
CEN	Comité de Normalisation Européen		
CENELEC	Comité de Normalisation Européen Électrotechnique		
CEP	Chemical Engineering Progress		
CEP	Chemical Exposure Index (DOW)		
CEQ	Commission on Environmental Quality		

CPD	Committee for the Prevention of Disasters	DSC	differential scanning calorimetry
CPL	Classification, Packaging and Labelling (Regulations) 1984	DSHA	Dangerous Substances in Harbour Areas (Regulations) 1987
CPLR	Classification Packaging and Labelling of Dangerous Substances Regulations 1984	DSIR	Department of Scientific and Industrial Research
CPR	critical pressure ratio	DSM	Dutch State Mines
CPS	control and protection system	DTA	differential thermal analysis
CPS	critical path scheduling	DTG	differential thermogravimetry
CPSC	Consumer Product Safety Commission	DTI	Department of Trade and Industry
CRHC	Chemical Reactor Hazard Centre	DTIC	Defense Technical Information Center
CRMRR	complete and rigorous model-based reconciliation	DTL	dangerous toxic load
CSE	concept safety evaluation	DTp	Department of Transport (UK)
CSF	cancer slope factor	EC	error cause (Whalley)
CSO	Central Statistical Office	EC	European Community
CSR	concept safety review	ECCS	emergency core cooling system
CSTR	continuous stirred tank reactor	ECCS	European Convention for Constructional Steelwork
CTM	causal tree method	ECETOC	European Chemical Industry Ecology and Toxicology Centre
CTOD	crack tip opening displacement	ECOIN	European Core Inventory of Existing Substances
CTU	cargo transport unit	ED	enumeration district
CV	control valve	EDC	ethylene dichloride
CVCP	Committee of Vice Chancellors and Principals.	EDF	Electricité de France
CVN	Charpy V-notch (test)	EDF	equivalent discrete failure
CW	continuous wave	EDP	emergency depressurization
CWA	dosed world assumption	EECS	Electrical Equipment Certification Service
CWR	Chemical Works Regulations 1922	EEGL	emergency exposure guidance level
CWRT	Center for Waste Reduction Technology	EEL	Edison Electric Institute
DAP	detergent alkylate plant	EEL	emergency exposure index
DAS	disturbance analysis system	EEL	emergency exposure limit
DBMS	database management system	EEMUA	Engineering Equipment and Materials Users Association
DCF	discounted cash flow	EEPG	Emergency Exposure Planning Guidelines
DCL	distributed control logic	EER	evacuation, escape and rescue
DDB	dependency-directed backtracking	EEUA	Engineering Equipment Users Association
DDC	direct digital control	EF	error factor
DDP	defect detection probability	EF	Escalation Factor (Dow)
DDT	deflagration to detonation transition	EFS	emergency feedwater system
DEA	diethanolamine	EFV	excess flow valve
DF	Damage Factor (Dow)	EHS	effective stack height
DF	dependent failure	EHS	extraordinarily hazardous substance
DFA	2,4-difluoroaniline	EIA	environmental impact assessment
DFNB	2,4-difluoronitrobenzene	EIDAS	Explosion Incidents Data Service
DG	diesel generator	EINECS	European Inventory of Commercial Chemical Substances
DGL	Directorate General of Labour	EIS	environmental impact statement
DHSV	down-hole safety valve	EIV	emergency isolation valve
DIERS	Design Institute for Emergency Relief Systems	EJMA	Expansion Joint Manufacturers Association
DIMP	Design Institute for Multiphase Processing	ELD	engineering line diagram
DIN	Deutsches Institut für Normung	ELSA	European laboratory for Structural Assessment
DMAC	<i>N,N</i> -dimethylacetamide	EM	error mechanism (Whalley)
DMV	diaphragm motor valve (Bhopal)	EMAS	Employment Medical Advisory Service
DO	damage only (accident)	EML	estimated maximum loss
DO	dissolved oxygen	EMS	Emergency Medical Services
DoE	Department of the Environment	EMS	environmental management system
DoEm	Department of Employment	EnvIDAs	Environmental Incidents Data Service
DoEn	Department of Energy	EO	equation oriented
DoI	Department of Industry	EO	ethylene oxide
DoT	Department of Trade	EOQ	economical order quantity
DOT	Department of Transportation (USA)	EP	environmental protection
DPLU	Disaster Prevention and Limitation Unit	EPA	Environmental Protection Act
DPT	decomposition pressure test	EPA	Environmental Protection Agency
DPT	dynamically positioned tanker	EPC	error producing condition
DR	discounted premium rate		
DRI	Distribution Ranking Index (Dow)		
DRM	deterministic reference model		

EPCRA	Emergence Planning & Community Right to Know Act 1986	FMRC	Factory Mutual Research Corporation
EPRI	Electrical Power Research Institute	FN	frequency-number (curve)
EPSC	European Process Safety Centre	FOD	Field Operations Division
EQO	environmental quality objective	FoF	figure of friction
EQS	environmental quality standard	FoI	figure of insensitiveness
ER	equivalent radiator	FOPL	first order predicate logic
ER	Exposure Radius (Dow)	FP	fluoroprotein
ERA	Electrical Research Association	FPA	Fire Precautions Act 1971
ERC	Emergency Response Commission	FPA	Fire Protection Association
ERCO	Energy Resources Company	FPC	Federal Power Commission
ERDS	European Reliability Data System	FPS	floating production system
ERG	emergency response guidelines	FPSO	floating production, storage and offloading (system)
ERM	equilibrium rate model	FR	filling ratio
ERPG	Emergency Response Planning Guidelines	FRC	fast rescue craft
ERQ	East Replacement Quarters (Piper Alpha)	FRG	Federal Republic of Germany
ERS	emergency relief system	FRP	fibre reinforced plastic
ERT	Environmental Research and Technology Inc.	FRS	Fire Research Station
ERV	expiratory reserve volume	FRV	functional residual volume
ES	environmental statement	FSA	formal safety assessment
ES	explosion severity	FSM	fault-symptom matrix
ESA	European Space Agency	FTA	fault tree analysis
ESD	emergency shut-down	FTE	fracture transition elastic (point)
ESH	electrical surface heating	FTP	fracture transition plastic (point)
ESP	equivalent standard plant	FTS	fault tree synthesis
ESTC	Explosives Storage and Transport Committee	FWPCA	Federal Water Pollution Control Act 1972
ESV	emergency shut-down valve	GAO	General Accounting Office
ESV	emergency shut-off valve	GCM	Gas Conservation Module (Piper Alpha)
ET	error type (Whalley)	GD	Germeles-Drake
ETA	expected time of arrival	GDA	goal-directed activity
FA	fragility analysis	GdF	Gaz de France
FAD	failure analysis diagram	GDO	general development order
FAD	failure assessment diagram	GDR	German Democratic Republic
FAE	fuel-air explosion	GFM	goodness-of-fit measure
FAFR	failure accident frequency rate	GFRP	glass fibre reinforced plastic
FAR	fatal accident rate	GIS	general incident scenario
FB	fractional bias	GMAW	gas-metal arc welding
FBL	fracture-before-leak	GNP	Gross National Product
FCAW	fluxed core arc welding	GOFA	goal-oriented failure analysis
FCT	flux-corrected transport	GoI	Government of India
FDA	Food and Drug Administration	GOM	Gulf of Mexico
FDG	flue gas desulphurization	GP	general purging (nitrogen)
FDM	finite difference method	GPH	General Process Hazard (Dow)
FDT	fractional dead time	GRP	glass reinforced plastic
FECA	Federal Emission Control Act 1974	GRS	Gesellschaft für Reaktorsicherheit
F&EI	Fire and Explosion Index	GRT	Gross registered tonnage
FEMA	Federal Emergency Management Agency	GS(I&U)R	Gas Safety (Installations and Use) Regulations 1984
FERC	Federal Energy Regulatory Commission	GSR	Gas Safety Regulations 1972
FFFP	film forming fluoroprotein (foam)	GT	Gaz Transport
FFP	flame front projection	GTAW	gas-tungsten arc welding
F&G	fire and gas	GTST	goal tree-success tree
FHA	Federal Highways Authority	GVW	gross vehicle weight
FIA	Factory Insurance Association	HAC	hazardous area classification
FIBC	flexible intermediate bulk container	HALO	hazard assessment of landfill
FICA	Federal Emission Control Act (Germany)	HANES	Health and Nutrition Examination Survey
FL	frequency-loss	HAZ	heat affected zone
FM	Factory Mutual	HAZAN	hazard analysis
FMA	Fertilizer Manufacturers Association	HAZMAT	hazardous material
FMD	fragment mass distribution	HAZOP	hazard and operability (study)
FMEA	failure modes and effects analysis	HCFC	hydrochlorofluorocarbon
FMEC	Factory Mutual Engineering Corporation	HCLPF	high confidence of low probability of failure
FMECA	failure modes, effects and criticality analysis	HCR	human cognitive reliability
		HD	hazard distance

HD	Hazard Division	IC	inspiratory capacity
HDPE	high density polyethylene	ICAO	International Civil Aviation Organization
HDR	high discharge rate	ICBO	International Conference of Building Officials
HEART	human error assessment and reduction technique	ICD	inherently cleaner design
HED	Human Error Database	ICE	Institution of Civil Engineers
HEH	homogeneous equilibrium model	ICFTU	International Confederation of Free Trade Unions
HEP	human error probability	ICChemE	Institution of Chemical Engineers
HER	human error rate	ICHMAP	International Co-operative Hydrogen fluoride Mitigation and Assessment Program
HF	hydrogen fluoride		
HFC	hydrofluorocarbon		
HF/E	human factors/engineering		
HFLR	Highly Flammable Liquids and Liquefied Petroleum Gases Regulations 1972	ICI	Imperial Chemical Industries
HFO	heavy fuel oil	ICRP	International Committee on Radiological Protection
HFRG	Human Factors in Reliability Group	ICS	International Chamber of Shipping
HGDT	heavy gas dispersion trial	ID	identification number
HGT	heavy goods train	IDA	influence diagram analysis
HGV	heavy goods vehicle	IDLH	Immediately Dangerous to life and Health (limit)
HI	hazard index	IE	index of explosibility
HIO	Hazardous Incident Ordinance (Germany)	IEC	International Electrotechnical Commission
HIPS	high integrity protective system	IEE	Institution of Electrical Engineers
HIS	Health Interview Survey	IET	insulated exotherm test
HISS	high integrity shut-down system	IFAL	instantaneous fractional annual loss
HIT	hazardous installations and transport	IFE	Institution of Fire Engineers
HTI	high integrity trip initiator	IGE	Institution of Gas Engineers
HITS	high integrity trip system	IHVE	Institution of Heating and Ventilation Engineers
HIVE	high integrity voting equipment		
HM	hazardous material	IISO	Institution of Industrial Safety Officers
HMAP	Hydrogen Fluoride Mitigation and Assessment Program	IL	integrity level
HMCIF	HM Chief Inspector of Factories	ILCI	International Loss Control Institute
HMFI	HM Factory Inspectorate	ILO	International Labour Office
HMIP	HM Inspectorate of Pollution	IMechE	Institution of Mechanical Engineers
HMIR	Hazardous Materials Incident Reporting	IMAS	influence modelling and assessment system
HMV	hydraulic master valve		
HND	Higher National Diploma	IMCO	Intergovernmental Maritime Consultative Organization
HORATIO	Human Response Analyzer and Timer for Infrequent Occurrences	IMDG	International Maritime Dangerous Goods (Code)
HP	high pressure	IMO	International Maritime Organization
HPI	high pressure injection	INRS	Institute National de Recherche sur la Sécurité
HPIM	high purity inert medium		
HPIP	human performance investigation process	IOI	International Oil Insurers
HQ	hazard quotient	IP	industrial platform
HRA	human reliability analysis	IP	Institute of Petroleum
HRC	hydrocarbon release (database)	IPC	integrated pollution control
HRS	hazard ranking scheme	IPIECA	International Petroleum Industry Environment Conservation Association
HSB	Hartford Steam Boiler		
HSC	Health and Safety Commission	IPL	independent layer of protection
HSE	Health and Safety Executive	IPSG	International Process Safety Group
HSF	hardware, software and fire fighting	IR	infrared
HSWA	Health and Safety at Work etc. Act 1974	IRI	Industrial Risk Insurers
HTA	hierarchical task analysis	IRIS	incident reporting and investigation system
HTF	heat transfer fluid		
HTF	high temperature fluid		
HTGR	high temperature gas-cooled reactor	IRLG	Interagency Regulatory Liaison Group
HTHM	high toxic hazard material	IRV	inspiratory reserve volume
HV	high velocity	IS	ignition severity
IAEA	International Atomic Energy Agency	ISA	Instrument Society of America
IAPH	International Association of Ports and Harbours	ISGHO	International Study Group on Hydrocarbon Oxidation
IARC	International Agency for Research on Cancer	ISGRA	International Study Group on Risk Assessment
IATA	International Air Transport Association	ISLO	Installations Subject to Licensing Ordinance (Germany)
IBC	intermediate bulk container		

ISO	International Standards Organisation	LS	limit switch
ISR	incoming solar radiation	LS	logical sufficiency
ISRS	International Safety Rating System	LTA	lost time accident
IST	isothermal storage test	LTI	lost time injury
ITB	Industry Training Board	LTMS	logic-based truth maintenance system
ITB	Insurance Technical Bureau	LTPD	lot tolerance per cent defective
ITC	Interagency Testing Committee	LTSR	long-term safety review
ITOPF	International Tanker Owners Pollution Federation	LVHV	low volume, high velocity
ITSA	Independent Tank Storage Association	LWR	light water reactor
IUR	International Union of Railways	MAC	maximum allowable concentration
JFRO	Joint Fire Research Organization	MACT	maximum achievable control technology
JHEP	joint human error probability	MAPP	major accident prevention plan
JIT	'just-in-time'	MAPP	methyl acetylene/propadiene/propylene
JRC	Joint Research Centre	MAPCO	Mid-America Pipeline Company
JT	Joule-Thomson	MAPPs	maintenance personnel performance simulator
JTMS	justification-based truth maintenance system	MARPOL	International Conference on Revision of the International Regulations for Preventing Collisions at Sea
KAF	knowledge acquisition facility	MAUD	multi-attribute utility decomposition
KASP	Kjeller Ammonia Stress Corrosion Project	MAWP	maximum allowable working pressure
KWU	Kraftwerk Union	MB	measure of belief
LA	Local authority	MC	motor cycle
LAAPC	local authority air pollution control	MCA	Manufacturing Chemists Association
LBB	leak-before-break	MCC	methylcarbamoyl chloride
LBF	leak-before-fracture	MCL	maximum credible loss
LC _n	lethal concentration (<i>n</i> % level)	MCSOII	multiple-cause, systems-oriented incident investigation
LCC	life cycle costing	MCSP	Model Code of Safe Practice (IP)
LCT _n	lethal toxic concentration (<i>n</i> % level)	MD	measure of disbelief
LCV	level control valve	MDA	modellers data archive
LD _n	lethal dose (<i>n</i> % level)	MDF	multiple degree-of-freedom
LDC	London Dumping Convention	MDI	4,4-Diphenylmethane diisocyanate
LDG	List of Dangerous Goods and Conditions of Acceptance	ME	multienergy (model)
LDPE	low density polyethylene	MEA	monoethanolamine
LEFM	linear elastic fracture mechanics	MEHQ	methyl ether of hydroquinone
LEL	lower explosive limit	MEL	maximum exposure limit
LER	licensee event report	MEPC	Marine Environment Protection Committee
LEV	local exhaust ventilation	MES	multilinear events sequencing
LF	landfill	MESG	maximum experimental safe gap
LFG	liquefied flammable gas	MF	management factor
LFL	lower flammability limit	MF	material factor
LGC	liquefied gas carrier	MFCC	multiple forced circulation circuit
LGF	Liquefied Gaseous Fuels (Spill Effects Program)	MGL	multiple Greek letter
LGFSTF	Liquefied Gaseous Fuels Spill Test Facility	MHAP	Major Hazards Assessment Panel
LGV	light goods vehicle	MHAU	Major Hazards Assessment Unit
LITTS	large inventory top tier site	MHIDAS	Major Hazard Incidents Data Service
LLNL	Lawrence Livermore National Laboratory	MIBK	methylisobutyl ketone
LN	logical necessity	MIC	methyl isocyanate
LNG	liquefied natural gas	MIC	minimum igniting current
LNH ₃	liquefied ammonia	MIE	minimum ignition energy
LOCA	loss of coolant accident	MIG	metal inert gas
LOV	locally operated valve	MILP	mixed integer linear programming
LOX	liquid oxygen	MILNP	mixed integer non-linear programming
LPA	local planning authority	MITI	Ministry of International Trade and Industry

Subject Index

Notes

- (1) In the case where the text refers to a publication, the Author Index gives the entry for the relevant body, which may be an organization, institution or company or a commission, committee or inspectorate. Otherwise, reference to such bodies is in this index.
- (2) Acronyms used in the index may be found in the Acronyms section.
- (3) Free-standing entities are generally given in full but where one is used as a qualifier, its acronym may be used. A typical case is the pair of entries *Trinitrotoluene* and *TNT equivalent model*. Another pair is *Institution of Chemical Engineers* and *IChemE Maintenance Guide*.
- (4) Many entries in this index are prefaced by the words *Plant* or *Process*.
- (5) Cross-references are generally not given to entries which begin with the same initial word, e.g. Control algorithms, Control loops or to entries in which the words are closely related e.g. Welds, Welders, Welding
- (6) Within an entry, one form of cross-reference is use of the term *see*. In this case, where the following word begins with a lower case letter the cross-reference is to a subentry within the same main entry; where the word begins with an upper case letter, the cross-reference is to another main entry. Another form of cross-reference comprises the term *q.v.*, which refers to the main entry of the same name.
- (7) In a given entry, a page number in a chapter is indicated by the chapter number followed by a stroke and then the page number, e.g. 17/35, which denotes Chapter 17, page 35. Similarly, a page number in an appendix is indicated by the letter A followed by the appendix number, the stroke and the page number, e.g. A2/13 and one in the preliminary matter by the letter P, a stroke and the page number, e.g. P/7.
- (8) Appendix 1 contains two series of case histories, the A and B series. In the entry *Case histories* and in entries where the incident is named, the reference is given in the form A7 or B13; otherwise it is given as a page number.
- (9) Chemical and physical properties are generally referred to under the particular chemicals.
- (10) Entries referring to case histories may include hypotheses on the causes.
- (11) In the entry point probit equations use is made of the following additional abbreviations: ELB: Eisenberg, Lynch and Breeding; Fletcher: Fletcher *et al.*; HC: Hadjipavlou and Carr-Hill Jones: Jones *et al.*; PA: Perry and Articola.

 autoignition temperature, B37, B43
 autorefrigeration, B59
 back reaction, B2, B4
 bagging plant, B39
 ball mill, B40
 barges, A96; 23/78–79
 barricades, B4
 batch reactors, B1, B2, B4, B20, B28, B34
 benzene, A32; 25/21–23; A1/13
 blast damage, B2, B6
 blast furnaces, A78; B51
 blockages, B1, B30, B59, B60; 15/332; 27/9–11
 blowdown systems, B59
 boiling liquid expanding vapour explosions (BLEVEs), A19, A25, A27, A50, A61, A63, A92; 22/77; 23/78
 bolts, B58
 Flixborough, Piper Alpha, *q.v.*
 bolt tightening, A104; 21/26
 breathing equipment, B26, B50, B51, B54
 brittle fracture, low temperature embrittlement, A65, A123; 12/81; 22/77
 building design, B10
 bund fires, 22/77
 bund overtopping, 22/59, 77
 burner explosions, B7, B24
 bursting discs, B4, B8
 business interruption, 5/17–18
 butadiene, A10, A45, B10
 butane, A20; A25, A38, A68, A83, A96, A111, A117, B59; 22/77; 23/78, 81–82
 carbon dioxide, 22/78; 25/21
 carcinogens, A1/78
 catalysts, B1, B23, B27, B31, B34
 catalytic crackers, A121; A1/10, 14
 caustic soda, 25/22
 centrifuges, B5
 chemical reactions, B15; 25/22–23
 chemical reactors, A33, A39, A80, A91, A117, A126, A131, A137; B1–B4, B8, B23, B28, B29, B34; 25/22
 chlorine, B2, B3, B14, B27, B49; A1/9–19
 chlorine cellrooms, B27; 25/22
 chlorine releases, A29, A79, A94, A97, A100; B2, B27, B66, B67; 18/65–67; 24/18
 buildings, protection afforded by, A29
 chloronitro compounds, B15
 chutes, B56
 cigarettes, B26
 cigarette lighters, B26
 cleaning, 25/22

- coke ovens, A1/15
 collisions (ships), 23/78, 81–82
 communication, 25/22
 compilations of, 2/25; A1/2, 68–69
 compressed air, B27, B42, B43, B52
 compressors, A36, A104; B27, B42, B43, B52
 computer control, B17
 contractors, B53
 control rooms A51, A89; 10/33–34; A2/4, 5, 7, 16–17
 control valves, B13, B22, B26, B30
 corn, A1/9–10
 corrosion, 25/23; B59
 corrosion monitoring, 19/46
 corrosion policy, 12/88
 cranes, B57
 crankcase explosions, 17/1840
 cumene, A1/13, 15, 20
 cost of losses, 27/11, 21–24; A1/11–22
 cyclohexane, *see also* Flixborough, A56
 dead heading, 25/21–22
 decommissioning, 22/78
 decomposition, B52
 dense gases, A7/21–22
 density difference
 gas, 25/21–22
 liquid, 25/21–22
 deteriorated equipment, 21/39
 diborane, B6
 diesel oil, 22/77
 dimethyl ether, A1/10
 disarming (of trips), B27
 dispersion, B33, B55
 distillation, A32, A45, A75, A101, A115, A122, A133; B16; 25/1
 Dowtherm, B18, B24; 25/22
 drains, 22/77
 drain valves, 15/332
 draining, 22/77; 25/22
 driers, B7, B12, B39
 drum filling plants, B36
 drum storage, 22/78
 dust explosions, A21, A35; B34, B39, B40 17/266
 dust fires, B34, B40, B56
 dynamite, A32
 early warnings, B19, B41, B42, B61; 27/11
 earthquakes A20, A34; A1/77
 electrical equipment, B9
 electrical heaters, B31
 electrical power supplies, B13; A1/77
 electrolysis plants, A77
 emergencies, 24/17–19
 emergency isolation valves, 11/101; 12/30–31
 emergency planning (works emergencies), B2
 emergency procedures, 20/8
 entry into vessels B50, B51; 21/37
 epichlorhydrin, B16
 epidemiological studies, 18/9
 equipment supports, 22/78
 escalation, A118; 22/77–78; 23/79
 ethanol, 23/79
 ethanolamines plants, A31
 ethyl acetate, B61
 ethyl benzene, A1/17
 ethyl chloride, A1/12
 ethylene, A55; B21, B55; A1/11–17, 19–21
 ethylene dichloride, B17
 ethylene glycol, 25/21
 ethylene oxide, A115, A122, A133; B30; A1/12–15, 21, 22
 evacuation, A43, A97; B67; 9/70–71; 23/78; 24/18
 excess flow valves, B64
 explosions, A67, A72, A77, A80, A81, A82, A83, A89, A95, A101, A102, A105, A107, A115, A116, A117, A122, A125, A132; B2, B4–B6, B10–B16, B18–B20, B23, B27, B29, B30, B31, B33, B35–B37, B42, B43, B61, B65; 22/77; 23/78, 79; 25/21–23; 27/9–11, 21–24; A1/2
 explosion relief, B4, B8, B38
 explosives, A2, A3, A125; 27/21–24
 fatigue, 12/81; 22/78
 feed additives, A81; 23/78; A1/17
 feed tanks, B32
 filters, B52
 fires, A58, A88, A90, A93, A103, A106, A108, A109, A110, A112, A114, A116, A118, A126, A134, A138; B2, B3, B17, B21, B29, B39, B52, B53, B59, B64; 2/9; 22/77; 23/78, 79; A1/2
 fire damaged equipment, 21/39
 fire fighting, A38, A113, A114, A118; 23/79
 fire services, B50, B66
 fire spread, 23/79
 fireballs, A50, A59, A60, A91, A118, A139; 22/77; 23/78
 congested fireballs, A131
 fish kills, A1/64, 79
 flame failure detectors, B24, 25
 flammable liquids, A1/17
 flammable mixtures, B3, B7, B9–B13, B22, B24, B25, B27–B30, B33–B36, B40, B53, B56, B65; 25/21–22
 flanged joints, breaking of, 21/26, 28
 flash fires, B29, B34, B39; 22/77
 floods, A1/77
 flow control, B18, B38
 flow measurement, B18, B31
 flow ratio control, B23
 flying glass, B28
 foam, foaming, B19
 fouling, B16, B31
 fracture mechanics, 22/55–56
 freezing, B18, B49, B55
 fuel gas, B7, B24
 fuel oil, B37, B38
 furnaces, B17, B21, B38; 5/18; 25/22
 gas breakthrough, A116
 gas plants, A119
 gaseous effluents A1/79
 gasholders, A7; B37
 gasoline, 23/78
 gassing, B49–B51, B66, B67; 18/65–68, 76
 glass, B28
 grain silos, A89; 17/305
 groundings (ships), 23/79, 81
 gunpowder plants,
 heat exchangers, A83, A105, A129, A136; 12/35; 19/44–45
 heat of mixing, 25/22
 hoses, B56, B64; 18/66; 25/23
 human error, B2, B7, B16, B20, B26, B28–B31, B34–B36, B40, B49–B51, B57, B59; 6/15
 hurricanes, A49; 18/66; A1/77
 hydrocrackers, A116
 hydrogen, A126, 136; B2, B22, B23, B27, B33; 25/21, 23; A1/9, 12, 13, 15–17, 20, 21
 hydrogen attack, 12/82
 hydrogen-related cracking, 25/22
 hydrogen chloride, 25/23
 hydrogen peroxide, B19
 hydrogen sulphide, B50
 ignition sources B26, B34, B36, B39; 22/77
 ‘immiscible liquids’, 25/21–22
 impulse lines, B18, B31
 impurities, B42; 25/23
 inert gases, B9, B11, B34
 inert gas generators, B25
 instrumentation, B2, B7, B11–B14, B16, B18–B27, B30, B31, B38, B42; A1/2
 interlocks, B18, B20, B30
 isobutane, A40, A71
 isobutylene, A1/13
 isoprene, A1/15
 isolation, B49, B51, B59
 isolation valves, B49, B59
 joints, B38, B52
 labelling, 23/78
 lagging fires, A115; B37, B38
 layering, 25/21–22
 leaks, B37, B38; 12/30–31
 in learning process, 2/25; 27/9–11
 level control, B22, B32
 level measurement, B19
 LFG carriers 23/81–82
 lightning, A46; 23/79
 liquid effluents, A1/79–80; A11/27
 litigation, 3/31–32; A1/80
 loading/unloading facilities B44, B58, B61; 25/22
 LNG, A11, A54; 17/156; 22/77; 23/81–82; A1/10, 15
 LNG carriers, 23/81–82
 LNG fires, 23/28–29
 LNG storage, 22/77
 loading/unloading, A47, A65, B58, B61, B63, B68; 25/22

- LPG, A27, A30, A44, A50, A59, A61, A76, A93, A127, A128; 23/79, 81–82; A1/11, 13, 14–22
- LPG carriers, A38, A40, A92; 23/79, 81–82
- LPG storage, 22/77
- lubricants, B41, B43; A1/11
- maintenance personnel error, B29, B43
- malfunction detection, B2
- maloperation, B1, B2, B31
- malpractices, B32, B36, B50, B57, B64
- manual control, B31, B32, B38
- marine transport, A1/2
- mercury, A1/79
- methane, A107; 17/156; A1/12, 13, 16, 18, 20
- mild steel, combustion in chlorine, B3
- missiles, *see also* Fragments, Missiles, A44, A50, A53, A81; B4, B6, B43, B66; 17/217; 23/78, 79
- missile damage, B5, B6
- molten metal–water explosions, A78; 17/186
- monomers, B60
- monomethylamine nitrate, A1/16
- monovinyl acetylene, A36, A46; A1/12
